Of the inhabitants in 1910, 10,050,575 were Hungarians, 2,949,032 Roumanians, 2,037,435 Germans, 1,967,970 Slovaks, 1,833,162 Croatians, and 1,106,471 Servians. By religions (1910) there were 10,888,338 Roman Catholics, 2,025,425 Greek Catholics, 2,986,874 Orthodox Grecks, 1,340,195 Lutherans, 2,621,501 Calvinists, and 932,406 Jews. In addition to Budapest, which had, in 1910, 881,601 inhabitants, there are ten cities with over 50,000 inhabitants.

All the great plains produce grain of excellent quality. The live stock in 1911 included 7,320,000 cattle, 2,350 000 horses, 8,550,000 sheep, and 7,580,000 pigs. The chief mineral products are gold, silver, copper, lead, quicksilver, antimony, iron, coal, and sulphur. The mines, however, are not well worked, and might be made a much greater source of income. Salt is a Government monopoly.

2nd Secretary, Count Phillipe de Beaufort.

Military Attaché, Commandant R. J. A. Maton, C.B.

Consul-Gen., M. E. Pollet, 40 Finsbury Square, E.C.

A Kingdom of Central Europe, with a total area of 11,373 square miles and a population (at the census of 1910) of 7,516,730.

There are nine provinces: Antwerp, Brabant, Flanders (E. and W.), Hainaut, Liège, Limburg, Luxemburg, and Namur. BRUSSELS, pop. 1910, 195,630 (with suburbs, 720,347 inhabitants) is the capital. Other towns with over 100,000 inhabitants are Antwerp, the chief port (320,650 exclusive of suburbs); Ghent (165,149), the centre of the iron industry, which has also large cotton and flax spinning mills, and is the second port of importance after Antwerp, while its flower shows are famous; and Liège (174,768). Its great harbour and commercial *entrepôt* is Antwerp, a strongly fortified city on the Schelde. The other harbours are Ghent, Bruges, Ostend, Nieuport, Blankenberg, and Zeebrugge. French and Flemish are the joint official languages, but while French is the language of the upper classes, Flemish is spoken by the majority, preponderating in Flanders, Limburg, and Brabant, including Antwerp. Nearly all the inhabitants are, at least nominally, Roman Catholics.

In 1830 Belgium separated from Holland, and her neutrality was guaranteed by a Conference of the European Powers, and by a further treaty, in 1839, signed by Austria, France, Great Britain, Prussia, The Netherlands, and Russia.

The Belgian constitution of 1831 jointly vests the legislative power in the King, the Senate, and the Chamber of Representatives. The 110 senators (with the exception of 27 elected by the provincial councils) and 166 representatives are elected by the people, the former for eight, the latter for four years. Universal male suffrage, with plural voting up to three votes by property and educational qualifications, was introduced by the Electoral Law of 1894, proportional representation being secured by an Act of 1900. There are in addition representative Provincial and Communal Councils, elected on a somewhat more liberal franchise.

Belgium has a frontier of 831 miles, and is bounded on the north and east by the Netherlands (268 miles), on the south and west by France (381 miles), on the east by Germany (60 miles) and the Grand Duchy of Luxemburg (80 miles), with a seaboard of 42 miles. The Meuse and its tributary the Sambre divide it into two distinct regions, that in the west being generally level and fertile, whilst the table-land of the Ardennes, in the east, has for the most part a poor soil.

The "polders" near the coast, which are protected by dikes against floods, cover an area of 193 square miles. The highest hill, Baraque Michel, rises to a height of 2,230 feet, but the mean elevation of the whole country does not exceed 536 feet. The principal rivers are the Schelde (Escaut) and the Maas (Meuse). Brussels has a mean temperature of 50° F. (summer 63°, winter 37°).

DEFENCE. — There is universal liability to service, but in practice the Army on a peace footing consists of about 50,000 men. The war strength amounts to somewhere about 350,000. Belgium has no navy.

Antwerp is the principal fortress, and Liège and Namur are also fortified, forming "Têtes-de-pont" on the line of the Meuse against a violation of neutrality by either France or Germany. (On the 2nd Aug., 1914, this neutrality was violated by an entirely unprovoked invasion of the German army at Visé. They met with the most stubborn resistance from the valiant though numerically inferior Belgians at Liège and Namur. The Germans celebrated their occupation of a large part of the country by debauching and subsequently destroying Louvain, Termonde, and other places and setting up a reign of terror generally. They are at present in occupation of practically the whole country, where they are exercising Civil Government.)

EDUCATION.—Schools are maintained by communal taxation, with provincial and State grants, while many are under ecclesiastical control, Roman Catholic largely predominating. There are 134 State high schools, including 44 for girls, and numerous private institutions. Special schools abound. The State Universities are at Ghent and Liège; others at Louvain and Brussels.

COMMERCE.—Belgium is essentially a manufacturing country, and it is largely dependent upon foreign supplies for its food. The mineral kingdom yields coal, iron, zinc, lead, and copper. The leading industries are collieries, quarries, and metallurgic (Mons, Charleroi, Liège, Namur, Hainaut, and Brabant), glass, textiles (Verviers), lace (Brussels, Mechlin, Bruges, &c.), flour and starch mills, sugar, distilleries, breweries, &c.

TRADE WITH U.K., 1914.

The exports to the United Kingdom in 1914 were (*Board of Trade*):—

	£		£
Apparel	151,194	Meat & Rabbits	98,871
Brooms & Brushes	96,949	Motor Cars, &c.	553,887

Leather and Boots	247,907	,, Manufactrs.	374,945
Linen Yarn	125,011		

Most of the maritime trade of Belgium is carried on in foreign bottoms, the mercantile marine only consisting (1912) of 105 vessels (181,637 tons), in addition to which there were 453 fishing boats. In 1912, 9,268 foreign vessels entered at Belgian ports (tonnage 14,497,101). In 1912 there were 4,719 kilometres of railway (including branch lines and 350 kilometres of private lines rented by the State); the telegraphs had a length of 7,975 kilometres (1911), and the post-office carried 218,000,000 letters, 123,000,000 post-cards, while 22,000,000 telegrams were sent in 1911. The navigable rivers and canals have a length of 2,179 kilometres (1911), and there are 9,757 kilometres of roads.

BRITISH CONSULAR OFFICES. (Suspended.)

THE BELGIAN CONGO.

The Independent State of the Congo became a Belgian Colony by a law of 18 Oct., 1908.

The total area amounts to 802,000 sq. miles, with a native population estimated at not more than 15,000,000. The total European population (Jan., 1912) was 5,465, of whom 379 were British, 48 Americans, 278 Italians, 303 Portuguese, 177 Swedes, 150 Germans, and 3,307 Belgians. The river is navigable for large vessels from its mouth at Banana to Matadi (95 miles), where the European steamers discharge and recharge their cargo; but between that place and Leopoldville, on Stanley Pool, there occur rapids and falls which have been avoided by a railroad 240 miles in length. There is also a second line, 60-centimetre gauge, from Boma to the Mayumbe country. The Great Lakes Railway has a line from Stanleyville to Ponthierville, 125 kilometres, and another line from Kinder to Kongolo, 355 kilometres. The completion of the line from Kabalo to Albertville on Lake Tanganyika now renders possible continuous communication by river and rail from the mouth of the Congo to the Lake, and across German East Africa to the Indian Ocean. A line of telegraph is open to Coquilhatville. There is telegraphic communication with Europe. A terrible disease, called "Sleeping Sickness," for which no remedy has yet been discovered, has of late years made increasing ravages upon the native population. However, the disease seems to have attained its highest point of severity, and in several districts is decreasing. There are undoubtedly many fertile tracts, more especially along the rivers; but barren mountain-land shuts out the coast from the more productive interior. The exports consist mainly of rubber (three-fifths of whole), palm-kernels, palm-oil, ivory, and a few minor articles. The coffee plant and cotton grow wild, and coffee, cocoa, and tobacco have been planted with success. Iron, copper, and other minerals have been found. Revenue (1912), £1,714,705; expenditure, £2,758,294; imports (1912), £2,154,713; exports (1912), £2,365,015. Capital, Boma (pop. 3,300). Matadi has about 4,000 inhabitants.

Boma (Congo)—Consul, W. J. Lamont ... £1,050
Kasai District—Vice-Consul, H. H. Castens 700
Elisabethville—V.-Con., F.W. Manners £530 to 730
Leopoldville—V.-Con., J. E. Bell 500 to 700
Stanleyville—V.-Con., R. I. Purdon ... 650

Consulate-General, 81 Cannon Street, E.C.

The Republic of Bolivia extends between lat. 8° and 23° S. and long. 57° 30′ and 73° W., and its area is about 567,498 square miles, with a population in 1911 estimated at 2,200,000. The peace army amounts to about 3,000 men, the war effective being about 90,000. The mineral productions are very valuable: the silver mines of Potosi are believed to be almost inexhaustible; while gold, partly dug and partly washed, is obtained on the Eastern Cordillera of the Andes; tin, copper, lead, antimony, wolfram, bismuth, salt, and sulphur are also found. Its agricultural produce consists chiefly of rice, barley, oats, maize, cotton, coca, indigo, india-rubber, cacao, potatoes, the choicest fruits, cinchona bark, medicinal herbs, &c., which with tin, gold, silver, and copper are its principal exports; its chief imports being iron, cotton and woollen goods, hardware, and silks. There are about 500 miles of trunk lines of railway and 2,896 miles of telegraph wire. There is direct railway communication with La Paz from Antofagasta (Chile), and from Rio Mulato (near Uyuni) to Potosi; branch lines are under construction from Oruru to Cochabamba. Railway from Arica to La Paz has long been completed and open to traffic. Proposed railway from Guaqui to Puno temporarily abandoned, the connexion between these

* The temporary Seat of Government is at Le Havre.

towns being still maintained by steamers across Lake Titicaca. Construction on the railway between La Quiaca and Tupiza, in Bolivia, has been started this year by a French firm. Communication with Peru is effected by rail to Guaqui and thence by steamer across Lake Titicaca to the railroad at Puno. The principal line is the Antofagasta and Bolivia railroad (719 miles). It is expected to be completed by the end of 1915, when it will connect with the steamers on the rivers Beni, Mamoré, and other tributaries. A line from Buenos Aires to Bolivia is complete to La Quiaca.

Brazil, the most extensive State of South America, extends between lat. 4° 22′ N. and 33° 45′ S. and long. 34° 40′ and 73° 15′ W., and comprises an area of 3,298,870 square miles, with a population estimated at 21,580,000, of whom about 1,000,000 are "wild" Indians. In the extreme south towards the interior the land rises by gentle gradations to the height of from 2,000 to 5,000 feet above the level of the sea.

The Navy (1913) consisted of 3 Dreadnoughts, 2 old battleships, 5 protected cruisers, and other smaller craft, including 11 torpedo-boat destroyers, and 3 submarines. There are 42 ports along the coast, of which the principal is Rio, with a shore line of 123 miles. Brazil is unequalled for the number and extent of its rivers: the Amazon, with its immediate tributaries, and the Tocantins, San Francisco, and others.

The minerals are very considerable and valuable, comprising gold, silver, iron, diamonds, topazes, and other precious stones. Its forests are immense, abounding in the greatest variety of useful and beautiful woods adapted for dyeing, cabinet work, or ship-building; among these are mahogany, logwood, rosewood, brazilwood, &c. Its agricultural produce is abundant; maize, beans, cassava-root, and nuts are very generally cultivated; also, in some parts, wheat and other European cereals. Cattle-raising is an important industry, the number being computed at 18,000,000. Cotton is being largely cultivated for export, and is being used for home manufactures. Sugar-cane is grown in large and increasing quantities in the northern provinces, Pernambuco being the centre of the sugar-producing zone. India-rubber comes from the more northern provinces, especially the valley of the Amazon, and is shipped from Pará and Manáos; and coffee, though also grown in the north, comes chiefly from Rio de Janeiro, Minas, São Paulo, and Esperito Santo. Tobacco and cocoa are grown largely, especially in Bahia. The exports consist solely of the raw produce of the soil. The imports consist principally of every description of manufactured articles, but there were in 1908 no fewer than 1,541 industrial establishments, including 161 cotton-mills, giving employment to 45,942 hands, and representing an invested capital of $70,000,000. The enormous protective duties were again increased in 1887, 1893, 1896, and 1906.

In December, 1913, there were 15,445 miles of railroad open and 1,683 miles under construction. Length of telegraph wires in 1913, 39,506 miles.

Estimated Revenue (1914 and 1915):—

President of the Sobranjé, M. Vatcheff.

The Kingdom of Bulgaria is bounded on the north by Rumania, on the west by Servia and Greece, on the east by the Black Sea, and on the south by the Turkish province of Adrianople and the Ægean Sea. The kingdom is governed by a King and a Council of Ministers, with a single chamber, popular legislature (Sobranjé, or National Assembly) and constitutional government.

Bulgaria was created by the Treaty of Berlin, 13 July, 1878, and in 1885 Eastern Roumelia was added to the newly created principality. In 1908 the country was declared to be an independent kingdom, the area at that date being 37,202 square miles, with a population of 4,337,500. In 1912–13 a successful war of the *Balkan League* against Turkey increased the size of the kingdom, but in August, 1913, a short campaign against the remaining members of the League reduced the acquired area, and led to the surrender of about 2,000 square miles to Rumania. In Oct. 1915 Bulgaria decided to participate in the European conflict, and, siding with Germany, Austro-Hungary, and Turkey, attacked Serbia. The present area of Bulgaria is about 42,000 square miles, with a population of about 5,500,000. The prevailing religion of the Bulgarians is the Orthodox Greek Church.

DEFENCE.—The strength of the Army in 1915 was given as 216 battalions of infantry, 58 machine gun companies, 158 field batteries, and 37 squadrons of horse, besides technical troops and fortress artillery. The fighting strength was approximately 250,000 rifles, 6,000 sabres, and 722 guns. By adding the last reserves an additional 100,000 men would be available.

EDUCATION is free and compulsory. There are few technical schools. Sofia has a University.

TRADE, &C.—The exports consist principally of cereals (especially wheat), live stock, essence of roses, woollens, skins, cheese, eggs, timber, cocoons, and tobacco; the principal imports being textiles, metal goods and machinery, colonial wares, leather, building materials, petroleum and other oils, paper, salt fish, rice, and coal. The principal towns, with their populations at the census of 1910, are Sofia (102,812), Philippopolis (47,981), Varna (41,491), Rustchuk (36,255), Sliven (25,142), Plevna (23,019), and Shumla (22,225). The principal ports are Varna and Bourgas. In 1910, 6,820 vessels (1,988,492 tons) entered and cleared at ports on the Black Sea. There were 1,384 miles of railway open in 1913 and about 239 miles under construction; 4,112 miles of telegraph and 1,254 of telephone wires. In 1912 there were 2,342 post offices, handling 79,896,000 letters; 374 telegraph offices, the number of dispatches being 2,499,600.

Consul, Vicente Echeverria Larrain, 94 Gracechurch Street, E.C.

A State of South America, of Spanish origin, lying between the Andes and the shores of the South Pacific, extending coastwise from the Rio Sama to Cape Horn south, between lat. 18° 28′ and 56° 35′ S., and long. 66° 30′ and 75° 40′ W. Extreme length of coast-line about 2,485 miles. Its extreme length is about 2,800 miles, with an average breadth, north of 41°, of 100 miles. The great chain of the Andes runs along its eastern limit, with a general elevation of 5,000 to 10,000 feet above the level of the sea; but numerous summits attain the height of 18,000 feet—the highest, Aconcagua, an extinct volcano, being 22,422 feet. The chain, however, lowers considerably towards its southern extremity. There are no rivers of great size, and none of them are of much service as navigable highways. In the north the country is arid. Chile is divided into 21 provinces and 3 territories, the aggregate area of which is estimated at 294,665 square miles, with a population (1912) of about 3,500,000, exclusive of Araucanians, Bolivian and American Indians, numbering about 50,000. In 1913, the births numbered 140,525; marriages, 21,461; and deaths, 107,200. The principal towns, with their estimated populations (1910), are:—Santiago (355,000), Valparaiso (200,000), Concepcion (62,000), Talca (45,000), Iquique (45,000), Chillan (35,000), and Antofagasta (32,000). The National Congress consists of a Senate of 37 members and a Chamber of Deputies of 118 members, elected by direct vote every three years. There is universal adult male suffrage for those who can read and write. Agriculture and mining are the principal occupations. Wheat, maize, barley, oats, beans, peas, lentils, wines, tobacco, flax, hemp, Chile pepper, and potatoes are grown extensively; the vine and all European fruit-trees flourish. The live stock includes about 2,000,000 cattle, 4,500,000 sheep, 500,000 horses, 290,000 goats, and 280,000 pigs. The mineral wealth is considerable, the country being extremely rich in copper-ore, and some rich gold mines have been discovered. The rainless north yields more especially nitrate of soda, iodine, borate of soda, gold and silver, a large number of mines yielding both being in actual work in Tarapacá, Guanaco, and Cachinal in Atacama, and Caracoles in Antofagasta; the centre, copper and silver; and the south, iron and coal. The nitrate exports in 1911-12 were valued at $101,250,000. There are smelting-works for copper and silver, tanneries, corn and saw mills, starch, soap, biscuit, rope, cloth, cheese, furniture, candle, and paper factories, breweries and distilleries; and the domestic industry furnishes cloth, embroideries, baskets, and pottery. The many ports favour commerce, and six lines of steamers connect the country with Panama and the Magellan Strait direct with Europe, a passage to Liverpool occupying from 40 days. There are (1913) about 5,008 miles of railway open and 400 miles under construction, nearly 15,000 miles of telegraph, over 1,114 post-offices, and 25,430 miles of telephone, the last worked by an English company. The commercial marine numbers (1912) 98 steamers (114,887 tons) and 41 sailing vessels (36,331 tons). In 1913, 14,110 vessels of a total tonnage of 26,227,203 entered at Chilian ports. The staple articles of export are nitrate of soda, iodine, &c., copper bars and ores, silver ores, corn, flour, hides, and guano. The imports include silks, woollens and other textiles, food, and machinery.

DEFENCE.—All able-bodied male citizens from 20th to 45th year must serve in the militia. The peace effective of the active army is 14,500. The navy consists of 2 battleships, 1 armoured cruiser, and 4 protected cruisers; 2 Dreadnoughts and 4 ocean t.b.d.'s are under construction.

EDUCATION is free but not compulsory, and a large proportion of the population are still illiterate. There is a State University at Santiago. The National Library contains 162,682 volumes.

Attachés, Lao Yu Ching; Han Chien.

AREA AND POPULATION.

Territory.	Square miles.	Population.
China Proper	1,501,000	402,000,000
Manchuria	360,000	11,000,000
Mongolia	1,076,000	3,000,000
Tibet	750,000	3,000,000
Eastern Turkestan	600,000	2,000,000
Total	4,287,000	421,000,000

China proper (or the Eighteen Provinces) contains an area of over 1,500,000 square miles. Its length from north to south is 1,860 miles, and its breadth 1,520 miles, and its population, according to the latest Chinese estimates, exceeds 400,000,000. The government of the 18 provinces is entrusted to civil and military governors, and under them each province is subdivided into circuits superintended by taoyins or intendants, and again into districts. All the territorial officials are appointed by the central Government, and the provincial governors, though free to act independently in many matters of local detail and finance, are responsible to the central Government at Peking in all important questions, and especially so in foreign affairs. The Treaty of Kiakhta, 1915, between China, Russia, and Outer Mongolia recognises the Hutukhta Khan as Ruler of Outer Mongolia, while China, as the Suzerain Power, appoints Residents at Urga and three other towns. The civil government of the three Manchurian provinces and of Turkestan is now similar to that of the province of China proper. The exact status of Tibet is still unsettled.

FOREIGN RELATIONS with the Chinese Empire have existed for many centuries. In the 13th century the Venetian merchant-adventurer Marco Polo resided in Cambaluc (the present Peking), and was employed by the Mongol Emperor Kublai Khan as adviser. In the 17th century Jesuit missionaries had attained considerable influence, but their power aroused jealousy, and they were expelled. The Dutch and Portuguese traders had for centuries maintained commercial dealings with the port of Canton, but towards the end of the 18th century they were largely displaced by the British East India Company, and when the Company's monopoly was withdrawn, in 1833, the position of British merchants in Canton became a national question, and contributed towards the first Chinese War of 1840. A treaty was signed at Nanking, as the result of these operations, ceding Hong Kong to Great Britain and opening five ports to foreign trade and residence; but the principle of extra-territoriality was maintained, and foreigners remained amenable only to the laws of their own countries. The continued exclusiveness of the Chinese Government led by a long chain of events to the war of 1860, when British and French troops captured Peking and burnt the Summer Palace. From this date the development of foreign trade began to be most important. In 1894 China fought a disastrous war with Japan, resulting in the loss of Formosa and the establishment of Corea as an independent state. An abortive attempt was made, in 1898, by the Emperor to introduce administrative reforms, but his reactionary ministers persuaded the Dowager Empress (his aunt) to reassume the reins of government. Under her rule a plot was hatched to rid the country of foreigners; and in the summer of 1900 the Legations in Peking and the foreign settlements in Tientsin were fiercely attacked and bombarded for many weeks. The situation was relieved at its most critical moment by the arrival of an allied army despatched by nearly all the Treaty Powers, and Tientsin and Peking were captured. The Imperial Court fled, and remained in voluntary exile until early in 1902. Meanwhile, a Peace Protocol was signed between the Envoys of the Treaty Powers and the Chinese Plenipotentiaries, Prince Ch'ing and the late Li Hung Chang. This provides for an indemnity of $325,000,000, to be paid within the next 39 years. Subsequent negotiations resulted in 3 new commercial treaties—(1) between the U.K. and China (5 Sept., 1902); (2) U.S. and China (8 Oct., 1903); and (3) Japan and China (9 Oct., 1903). Under the two last Mukden, Tatungkow, Chang-sha, and Antung in Manchuria, were made Treaty ports.

On the conclusion of the war between Russia and Japan in 1905, a Treaty and Additional Agreement relating to Manchuria were entered

into between Japan and China. By the former the Chinese Government consented to all the transfers and assignments made by Russia to Japan in Manchuria; and by the latter the following cities and towns in Manchuria were opened as places of international residence and trade:—Feng-huang-ch'eng, Liao-yang, Hsin-mintun, Tung-chiang-tzu (on the Liao River), and Fa-ku-men in Fengtien Province; Ch'ang-ch'un, Kirin, Harbin, Ninguta, Hunch'un, and Sansing in the Kirin Province; and Tsitsihar, Hailar, Aihun, and Manchuli in the Heilungchiang Province.

In October, 1911, a Revolution broke out in Hankow, which resulted finally in February, 1912, in the abdication of the Manchu Dynasty in favour of a Republican form of Government. In 1913, a second revolution, engineered by the Southern Party, was successfully put down by the present President. Since that date the Central Government has been gradually consolidating its position and bringing about a centralisation of power in Peking. In May, 1915, a new Treaty with Japan was concluded by which additional privileges are granted to Japanese in Manchuria and Mongolia. The Government now consists of a President assisted by a Secretary of State. The various Ministries are under the charge of Ministers who are responsible to the President. The Upper House or Council of State consists of 70 members nominated by the President and a Lower House of 350 members is to be elected by a system of limited franchise.

The estimated foreign population of China during the year 1914 is as follows: British, 8,914; Japanese, 84,948; Russian, 56,319; American, 4,365; Portuguese, 3,187; German, 3,013; French, 2,864; other nationalities, 2,197, the total being 164,807. Out of a total of 3,421 foreign firms in China, 534 are British, 1,237 Russian, 955 Japanese, 273 German, 136 American and 113 French.

DEFENCE.—The army is undergoing reorganisation. The total strength of all forces in August 1913, just after the Rebellion of that year, was estimated at 500,000, but no authenticated statistics are obtainable. China now possesses 2 protected cruisers built in 1911 (2,750 tons), 4 older protected cruisers (4,300-3,000 tons), 3 torpedo gunboats (850 tons), 11 gunboats (750-550 tons), 4 destroyers (400 tons), and 8 small torpedo boats (120 tons). No figures are available as to the complement of the Navy.

EDUCATION.—Many changes in administration and development are under discussion including a proposal to establish universal compulsory primary education. There is a University in Peking and a number of colleges all over China under foreign management. In 1911, there were 545 foreigners employed in educational work.

COMMERCE.—The net trade of the open ports for the years 1909–1914 is stated as follows, in *taels* (7's = £1).

Year.	Imports.	Exports.	Total.
1909	418,158,067	338,992,814	757,150,881
1910	462,964,894	380,833,328	843,798,222
1911	471,503,943	377,338,166	848,842,109
1912	473,097,031	370,520,403	843,617,434
1913	570,162,557	403,305,546	973,468,103
1914	557,109,048	345,280,874	902,389,922

The foreign trade of China was shared by the nations of the world as under in 1914:—

British.	%	Foreign.	%
Great Britain	12	Japan	20
Hong Kong	28	U.S.A.	9
India	4	Europe (exc. Russia)	11
Other British Dominions	2	Russia	6
		Other countries	8
% British	46	Foreign	54

TRADE WITH UNITED KINGDOM.

Imports of British produce and manufacture, 1914, £16,852,011:—

Boats and Ships	£20,445	Machinery	£622,520
Cottons	10,045,128	Tobacco	1,739,232
Iron Manufactures	891,123	Woollens	721,080

Exports to U.K., 1914, £5,317,730:—

Bristles	£297,192	Skins and Furs	£263,374
Hair	216,162	Soya Beans	176,484
Oil	278,005	Straw Plaitings	81,597
Peas and Beans	420,938	Tallow	68,525
Raw Silk	319,468	Tea	833,188
Silk Manufactures	157,143	Wool	169,250

COMMUNICATIONS. — *Railways.* — About 6,500 miles were open in Jan. 1915, inclusive of the Manchurian lines, while 2,500 miles more are projected or under construction.

Shipping.—The China Merchants Steam Navigation Co have a fleet of 31 ships of an aggregate tonnage of 60,000. Besides this, there are a large number of small vessels engaged in the coasting trade and on the Yangtse. In 1914 the total tonnage of vessels entered and cleared at the treaty ports was 96,326,276, an increase of 2,991,446 on that of the previous year. Of these 40 per cent. were British, 25 per cent. Chinese, 5 per cent. German, 20 per cent. Japanese, 2 per cent. French and 3 per cent. Russian.

Telegraphs are being rapidly constructed by the Central Government, and Peking is in communication overland with Europe and Tibet, the line being extended to Lhasa. In 1913 there were 37,000 miles of land lines and 51,000 miles of aerial wires.

CUSTOMS AND POSTS.—The Imperial Maritime Customs is the controlling service; this body consists of nearly 1,000 Europeans, a large proportion of them British subjects, all under the control of the *Inspector-General.* By an Imperial Decree of May, 1906, the Maritime Customs Dept. was transferred from the Foreign Board to the Board of Revenue, and two Chinese Administrators-General were appointed. But the change has not materially affected the powers hitherto exercised by the Inspector-General. In addition to the collection of dues at the Treaty Ports, this service manages the lighting and navigation thereof, and keeps a small fleet of cruisers to enforce its regulations. The Chinese Post Office, formerly a branch of the Customs, was transferred in 1911 to the Ministry of Communications, and a *Postmaster-General* (foreign) was appointed. Already letters can be sent all over the 18 provinces at a uniform rate of 3 cents for 20 grammes. The number of Chinese post offices is 8,324; 538,581,400 postal packets and 5,385,260 parcels were handled in 1914.

Revenue 1913	£33,000,000
Expenditure 1913	64,000,000
Debt 1913	200,000,000

	1913.	1914.
Imports	£86,118,000	£76,027,000
Exports	60,915,000	47,116,000

CAPITAL OF THE CHINESE REPUBLIC, Peking. Population, 1,000,000.

MANCHURIA lies to the north of China Proper, and has a total area of about 360,000 square miles, with a population estimated at 11,000,000. The capital is Mukden (pop. 250,000), a station on the Manchurian railroad and connected with the Russian system. Indigo, opium, cotton, tobacco, and various cereals are grown, and there is great mineral wealth.

MONGOLIA has a total area of 1,076,000 square miles and a population estimated at about 3,000,000. Outer Mongolia is now, by the Treaty of Kiakhta of 1915, an autonomous state under Chinese suzerainty. Its ruler, the Hutukhta Khan of Urga, receives his title from the Chinese Government. China appoints a Resident at Urga, with three Assistant Residents in other towns. The principal industry is cattle and sheep raising and the provision of transport animals.

TIBET (area, 750,000 square miles; pop. 3,000,000) borders on British India, *q.v.*

CHINESE TURKESTAN has a total area of 600,000 square miles and a population estimated at 2,000,000. It includes Zungaria and Chinese Tartary, and provides sheep, cattle, and transport animals for the caravan routes. The chief centres are Urumchi and Kulja.

Consul-General, José M. Nuñez U, 42 Holland Road, Kensington, W.
Consul in Liverpool, Luis E. Bonilla
Consul at Southampton, Lisandro Leyva.

The Republic of Colombia lies in the extreme north-west of South America, having a coast-line on both the Atlantic and Pacific Oceans. It is situated between 2° 40′ S. to 12° 25′ N. lat. and 68° to 79° W. long., with an estimated area of 461,606 square miles, and a population estimated at 5,475,000, of whom more than one-half are whites and half-castes. The country is intersected by three great ranges of the Andes, known as the Western, Central, and Eastern Cordilleras; the second contains the highest peaks, but the latter is the more important, as it consists of a series of vast table-lands, cool and healthy. Thus temperate region is the most densely-peopled portion of the Republic. Its forests are extensive; among the trees are mahogany, cedar, fustic, and other dye-woods and medicinal plants.

Its mineral productions are emeralds, gold, silver, platinum, copper, iron, lead, and coal. Its principal agricultural products are coffee, cotton, plantains, and bananas, and in some parts tobacco, wheat and other cereals. Its manufactures, for home consumption, consist of woollen and cotton stuffs. The chief exports are coffee, precious metals, hides, and india-rubber. All religions are tolerated.

The standing army consists of about 6,000 men; the navy has been abolished. Railroads are in their infancy, about 620 miles being open in 1914, with 8,680 (1907) miles of telegraph. The rate of exchange is about $5 gold or $500 paper = £1 (approximately).

	1912–13.	1913–14.

Public Instruction, Luis Felipe Gonzalez.

Envoy Extraordinary and Minister Plenipotentiary, Wenceslao de la Guardia, 10 Strathmore Gardens, W.
Consul-General, W. J. Le Lacheur, 58 Lombard Street, E.C.

The Republic of Costa Rica, the most southern State of Central America, extending across the isthmus, between 8° 17′ and 11° 10′ N. lat. and from 82° 30′ to 85° 45′ W. long., contains an area of about 23,000 English square miles, and a population (1914) of 420,179. The chief exports (1914) are coffee (£959,687), bananas (£972,528), gold and silver bullion (£182,868), cacao, hardwoods, rubber, skins, and hides. The imports are dry goods, hardware, provisions, railway material, machinery, paints, and general merchandise (in 1914, 53·27 per cent. from United States, 14·42 from United Kingdom, 14·10 from Germany, 3·98 from France, and 14·23 from other countries).

The chief ports are Limon, on the Atlantic coast, through which the whole of the important banana trade with the United States and England is done, as well as by far the larger part of the other exports and imports, and Puntarenas on the Pacific coast. In 1914, 508 foreign vessels (1,142,785 tons) entered at Costa Rican ports. About 385 miles of railroad were open in 1914. In 1914 there were 208 post offices, dealing with 7,703,077 packets, and 128 telegraph offices (one wireless), transmitting 1,123,728 dispatches over 1,661 miles of line. Telephones, 470 miles. A considerable amount of English capital is embarked in the Republic.

San José is 5,687 miles from London; transit direct, 15 to 18 days; *vid* New York, 18 to 20 days.

CRETE (or CANDIA).

Crete (or Candia) is an island in the Mediterranean, about 148 miles long and 7 to 30 miles in breadth, with an area of 2,950 square miles; the population is 303,543, of whom 269,319 are Christians, 33,496 Mussulmans, and 728 Jews. The island formed part of the early and later Roman Empires, and in 1669 was captured by the Turks, who retained it until 1898, when Great Britain, Russia, France and Italy set up a semi-independent government in the island under a High Commissioner, subject to the suzerainty of the Sultan of Turkey. At the outbreak of war between Greece and Turkey in Oct. 1912 Crete was declared to be part of the Hellenic kingdom. The climate is healthy, and a fine anchorage is presented by Suda Bay. The chief products are wheat and fruit; and wool, soap, olive oil, carobs, vallonea, and cheese are the principal exports. The chief towns are Candia (pop. 23,000), Canea, the capital (pop. 24,500), and Retimo (pop. 10,000).

Imports from U.K. (1914) £28,403
Exports to U.K. (1914)..... 5,254

Agriculture, Emilio Nuñez.

Envoy Extraordinary and Min. Plenipotentiary, General Carlos Garcia Velez, 3 Grosvenor Mansions, Victoria Street, S.W.
1st Secretary, Miguel A. Campa.

The island of Cuba lies between 74 and 85 W. long., and 19 and 23 N. lat., with a total area of 44,178 sq. miles and a population of 2,150,112 (1910). Cuba suffered many years of internal discord, from its discovery by Columbus until its liberation in 1898, having been a Spanish possession until the Spanish-American War, of which it was the main bone of contention. A Cuban constituent convention met at the end

of 1900 and agreed upon a Constitution (1901), which was ratified on certain conditions by the U.S.A. in 1902. In 1906 disturbances broke out and resulted in the renewed occupation by American troops and the establishment of a provisional administration, which ceased when President Gomez took over the administration in 1909.

The chief products of the island are tobacco and sugar; 2,516 miles of railroad were open in November, 1911, and 5,065 miles of telegraph line (1908).

CAPITAL, Havana (pop. about 297,000); other towns are Santiago (45,000), Matanzas (37,000), Cienfuegos (30,000), Cardenas (24,000), and Camaguey (29,000). In 1914 there were 25,911 immigrants.

Consul-Gen. in London, J. W. Faber, 8 Byward Street, Great Tower Street, E.C.
Vice-Consul, P. Nordlien.
Consul-General—Leith, E. Berry.
Consulates at Hull, Liverpool, Manchester, Belfast, Falmouth, Guernsey and Newcastle-on-Tyne.

A Kingdom of Northern Europe, and the smallest of the Northern States, consisting of the islands of Zeeland, Fünen, Lolland, &c., the peninsula of Jutland, and the outlying island of Bornholm in the Baltic. Denmark is situated between 54° 34′—57° 44′ N. lat. and 8° 5′—12° 40′ E. long., with an area of 15,042 square miles, and a population in 1911 of 2,757,076, nearly one-half of whom live exclusively by agriculture, and one-fourth by manufactures and trade.

The common products are wheat, rye, oats, barley, potatoes, cattle, horses, pigs, sheep, and butter. Its manufactures are, for the most part, for home consumption. Its principal imports are coals, manufactured goods (woollens, silks, cottons), iron, hardware, wine, fruit, tea, maize, and colonial produce. In 1908, 2,871,590 acres were under corn crops and 3,103,519 permanent pasture. In 1909 the live stock numbered 535,018 horses, 1,281,974 cows, 726,879 sheep, and 1,467,822 swine. The crops in 1910 included 4,884,356 qrs. of oats, 2,622,120 of barley, 2,353,974 rye, 2,065,763 mixed corn and 547,106 qrs. of wheat. Its chief exports are agricultural produce, including wheat and barley, bacon, hams, flour, butter, eggs, hides, skins, corn-meal and oil-cake, horses, and cattle. There is a sea-going mercantile marine of 553 steamers, with a tonnage of 671,828. There are (1901) 2,135 miles of railway and 24,294 miles of telegraph wire (1911).

DEFENCE.—The Army consists of about 14,000 trained men, the vote for 1914–15 amounting to Kr. 18,350,484. The Navy consists of 37 steam vessels (including 4 ironclads), mounting 227 guns, with 1,270 officers and men. Vote, 1914–15, Kr. 9,934,643.

EDUCATION is free and compulsory, the schools being maintained by local taxation. Special schools are numerous, horticulture and agriculture predominating. The University is at Copenhagen.

	1914.	1915.
Revenue	£7,492,736	£6,765,598
Expenditure	6,806,000	8,673,897
Public debt	20,098,941	21,813,117

The Budget shows an estimated Revenue for 1916–17 of £7,384,062, and an Expenditure of £6,567,276.

	1913.
Total imports	£47,522,000
Total exports	40,072,000

The estimated yield from taxation is Kr. 100,069,600. The interest on the Public Debt is £681,000.

Imports of British produce and manufacture, 1914, £7,160,182:—

Coal and Coke	£2,056,678	Machinery	£148,261

Consul-General in London, R. A. Brache, 17 Coleman Street, E.C.
Consul, Octavio Ventura.
Vice-Consul, A. M. Ventura.

The Republic of Santo Domingo, formerly the Spanish portion of the island of that name, is the oldest settlement of European origin in America, having been founded in 1496 by Bartolomeo Columbus, who named it Hispaniola. It comprises an area of about 18,045 square miles, with an estimated population of nearly 700,000. Sugar and cocoa are the most important crops, and coffee, and tobacco are grown in fair quantities, the other products being mahogany, furniture woods, wax, honey, logwood, fustic, turtle-shell, hides, bananas, and divi-divi. There are about 150 miles of public railroad, and telegraphic (3 wireless stations) and telephonic communication has been established throughout the Republic, which is connected by cable with North and South America, New York, Curaçao, and Porto Rico. The Customs are administered temporarily by officials appointed by the United States Government, under a Treaty by which the U.S. collects the Customs, assists the Government to maintain peace, and acts as intermediary between the Republic and its foreign creditors. Since 1907 not less than 55 per cent. of the Customs Collections has been deposited in a New York Bank to pay the interest and sinking fund charges of the Foreign Loan.

British trade is hampered by the absence of direct maritime communication.

CAPITAL, Santo Domingo. Population, 25,000.

Vice-Consul, Juan de Eiizalde.
Consuls at *Liverpool, Southampton, Glasgow*, and *Cardiff*.

A State of South America, extending from lat. 1° 38′ N. to 6° 26′ S. (according to the Ecuadorian geography, but there are boundary disputes with Peru and Colombia), and between 70° and 81° W. long., comprising an area of 116,530 English sq. miles. It has a population of about 1,300,000, mostly descendants of the Spaniards, aboriginal Indians, and Mestizoes. The giant chain of the Andes here presents the Chimborazo, 21,525 feet, the Cotopaxi, 19,613 feet, the Antisana, 19,335 feet, Cayambe, 19,186 feet above the level of the sea, and others. Ecuador is watered by the Upper Amazon, and by the rivers Guayaquil, Mira, Santiago, Chones, and Esmeraldas on the Pacific coast. There are extensive forests, and the cinchona bark tree is common. Ecuador is divided into 15 provinces and one territory.

Its chief products are cocoa, vegetable ivory, cotton, coffee, india-rubber, orchella weed, straw hats and hammocks, bark, yams, tobacco, fruits,

sarsaparilla, wheat, &c. Its minerals consist of gold, quicksilver, lead, iron, and copper; emeralds and rubies are occasionally met with, and sulphur is found in many parts. The chief exports are cocoa, caoutchouc, silver specie and gold, cinchona bark, Panama hats, coffee, and cattle. A railroad connecting Guayaquil and Quito was opened in 1908. Guayaquil is the chief port (population, 1908, about 60,000); other chief towns being Quito, 55,000; Cuenca, 25,000; and Riobamba, 12,000. The *Galapagos Islands* (2,400 square miles) belong to Ecuador; only about 200 miles are susceptible of cultivation.

Consul (*suppléant*) (vacant).
Chancelier, M. Mattei.

The most westerly State of Central Europe, extending from 42° 20′ to 51° 5′ N. lat., and from 7° 45′ E. to 4° 45′ W. long., bounded on the north by the Channel and Straits of Dover, which separate it from England. Its circumference is estimated at about 3,000 miles, and its area at 207,076 square miles, divided into 87 departments, including the island of Corsica, in the Mediterranean, off the west coast of Italy. The territory lost in 1871 amounted to 5,602 square miles. The population at the census of 1911 was 39,601,509; and in 1913 there were 745,539 births, 298,760 marriages, and 703,638 deaths. France has always been attractive to foreigners, of whom (1906) 1,046,905 were resident there, or 2·51 per cent. of the legal population; this number included 377,638 Italians, 330,433 Belgians, 87,836 Germans, 35,990 English, 14,863 of the latter residing in the Department of the Seine. 20 per cent. of the foreign population was born in France. About 26,000 Frenchmen are stated to be resident in England. The head of the Government is the President, elected septennially. The principal rivers are the Seine, Loire, Garonne, and Rhône; the principal forests Ardennes, Compiègne, Fontainebleau, and Orléans, consisting chiefly of oak, birch, pine, beech, elm, chestnut, and the cork-tree in the south. Fruit trees abound, and are very productive, the principal being the olive, chestnut, walnut, almond, apple, pear, citron, fig, plum, &c. The vine is cultivated to a very great extent (971,778,632 gallons of wine were produced in 1913), as the names Bordeaux, Burgundy, Champagne, &c., universally testify; cider-making is also an important industry, and the production in 1913 amounted to 661,868,702 gallons. The chief agricultural products are wheat, barley, rye, maize, oats, potatoes, beetroot, for the manufacture of sugar, hops, &c. Its mineral resources are comparatively small. They include, however, coal (1912, 40,394,177 metric tons), pig iron (4,939,194 metric tons), copper, lead, silver, antimony, and salt. The most important manufactures are of metals, watches, jewellery, cabinet-work, carving, pottery, glass, chemicals, dyeing, paper-making, woollens, carpets, linen, silk, and lace. The culture of oysters is an important industrial feature, and in the year 1911 244,593,150 oysters were produced, representing a value of £39,333.

DEFENCE.—*Army.*—Universal service strictly enforced, exemption for physical unfitness *only*. Three distinct organisations: (*a*) *Home* (*Metropolitan Army*) incl. estab. of Algeria and Tunis; (*b*) *Colonial Army* (in France). (*c*) *Colonial Forces* in colonies. The first is recruited by compulsion; the second mainly by voluntary enlistment, or voluntary transfer from the first; the third mainly by voluntary enlistment, with reserve power of compulsion. Law of 1913 provides for incorporation in active army at age 20 (instead of 21, as formerly), and periods of service as follows —Active army, 3 yrs.; active reserve, 11 yrs.; [territorial army, 7 yrs.; territorial army reserve, 7 yrs.]. *Peace establishment* (1913): (*a*) *Metropolitan Army*; (i.) In France, 517,963; (ii.) in

Algeria, 56,700; in Tunis, 18,200 (of the forces in Algeria-Tunis about two-fifths are natives); (iii.) *Gendarmerie, &c.*, abt. 25,000. *(b) Colonial Army in France*, 28,000. *(c) Colonial Forces*, abt. 130,000 (half natives). *Budgets* (1913), for (*a*) £32,513,000; for (*b*) £4,042,000; for (*c*) £3,485,000. In addition, considerable extraordinary expenditure was undertaken, or is contemplated. *W.E., Field Army (excl.* forces in Africa) *First Line*, 750,000; *Second Line*, 500,000; *total*, 1,250,000. *Reserves*, in depôts, 650,000; unorganised, 500,000; *total*, 1,150,000. [Territorial army, *organised*, abt. 550,000; *unorganised*, 750,000]. *Navy.*—21 battleships (10 building), 24 cruisers, 8 light cruisers, 3 torpedo vessels, 80 destroyers (7 building), 153 torpedo-boats, 50 submarines (26 building).

EDUCATION.—Educational system highly developed. *Central Administration* comprises (*a*) Ministry of Public Instruction; (*b*) Superior Educational Council, charged with the actual administration; (*c*) Consultative Committee (advisory); (*d*) Educational Bureaux and Inspecting Staffs, whose heads report direct to the Minister. *Local Administration* comprises (*a*) Territorial Academies, with inspecting staffs for all grades, and (*b*) Departmental Councils, presided over by the *préfet*, charged especially with *primary* education. By the Law of July, 1904, all congregationist institutions are to be suppressed within 10 years, and many were at once closed, some re-opening under lay management. (i.) *Primary: Secular, comp.* and *free.* Age 6–13. Schools include (*a*) infants; (*b*) lower primary; (*c*) higher do. Supplementary courses, and courses for adults. Lower and higher primary certificates granted. Numerous private courses are aided from local funds. Schools are for boys, for girls, or mixed. (ii.) *Secondary:* State lycées, communal colleges, and many private establishments, 7-yrs. course, either (*a*) purely classical; (*b*) purely modern; (*c*) Latin and sciences; or (*d*) Latin and modern languages. Degree of Bachelor conferred on completion. For females, a similar organisation, course 5–6 yrs. Sèvres school and the Sorbonne Association well-known. (iii.) *Special Schools* are very numerous, many public institutions being dependent on ministries other than that of Public Instruction. (iv.) *Universities* (State universities alone grant degrees, but numerous private faculties and private institutions further higher education): Aix, Algiers, Angers, Bordeaux, Caen, Clermont, Dijon, Grenoble, Lille, Lyon, Marseilles, Montauban, Montpelier, Nancy, Nantes, Paris, Poitiers Rennes, and Toulouse.

COMMUNICATIONS.—The system of railroads in France is very extensive; they are almost entirely *concédés*, and become State property after the expiration of the concession. The length of lines of general interest, inclusive of local lines, open for traffic on 31 December, 1912, was 25,579 miles, the total receipts from passenger and goods traffic, &c., being £75,513,464. The length of telegraph wires is 151,700 miles, and of telephone lines 107,150 miles. At the 1st of January, 1913, the mercantile marine, comprising boats of 2 tons and upwards, amounted to 17,670, vessels of 1,518,518 net tons (of which 15,813 were sailing ships, representing 614,024 net tons). The sums voted by Parliament for construction and navigation Bounties to Shipping and to Deep Sea Fisheries in 1912 amounted to £1,530,000, and £1,106,732 for Postal and Cable Service Subventions.

COMMERCE.—The principal imports are wool, cotton, coal, silk, oleaginous fruits and seeds, machinery, raw skins, cereals, timber, caoutchouc, copper, petroleum oils, coffee, and wines. The principal exports are cotton tissues, silk tissues, wool, woollen tissues, wines, smallwares, automobiles, &c., silks, raw skins, millinery and artificial flowers, dressed skins, tools and metal goods, machinery, pig iron, butter, table fruits, refined sugar, brandy and liqueurs, fish, and cheese.

	1913.	1914.
Revenue	£189,555,297	£207,567,024
Expenditure	189,544,141	207,665,723
	1911.	1912.
Debt	£1,255,938,160	£1,246,480,055
Floating Debt	68,611,560	55,835,936
	1911.	1912.
Imports	£324,428,000	£318,034,240
Exports	246,880,000	265,454,160

The exports to the United Kingdom in 1914 were valued at £37,774,178:—

Apparel	£1,325,778	Dyeing and Tanning Extracts	£431,910
Butter	1,674,155	Eggs	328,821
Motor Vehicles	1,765,631	Linen & Manuf.	248,873
Chemicals	476,185	Silk and Manufs.	5,467,267
Fancy (Paris) Goods	290,485	Skins ,,	772,015
Flowers, Artificial and Fresh	509,878	Spirits	924,972
Fruits	1,209,681	Potatoes & Veget.	699,964
Scientific Instr'ts	453,170	Wine	1,684,083
Leather & Manufs.	1,115,607	Wood and Manufs.	1,064,553
Copper & Manufs.	371,270	Wool	1,343,360
Oils	262,017	Woollen Yarn and Manufs.	6,002,664
Cotton & Manufs.	1,192,866		

The imports of British produce and manufacture in 1914 were valued at £35,052,260:—

Apparel	£466,710	Copper	£332,911
Rubber	198,082	Iron, Steel and Manufs.	1,412,297
Carriages, &c.	512,966	Tin, unwrought	220,053
Chemicals	1,226,321	Oilcloth	182,284
Coal and Coke	7,756,801	Paper	173,471
Corn and Grain	587,834	Ships and Boats	220,365
Cotton & Manufs.	1,178,981	Silk & Manufs.	212,619
Leather & ,,	1,651,474	Skins and Furs	130,030
Machinery	1,628,232	Woollen & Worst.	2,004,940
Manures	140,767		

Shipping.—During the year 1912 the total number of French and foreign vessels entering French ports amounted to 27,409, representing a tonnage of 30,586,106 tons, of which 7,401,797 tons were French, while the total clearings amounted to 20,440 ships of a tonnage of 23,153,011 tons, of which 6,707,571 tons were French.

Algeria.—The three departments of Algeria—Algiers, Oran, and Constantine—form an integral part of France, under a Governor-General, assisted by a Consultative Council. These departments lie between 4° 36′ W. to 6° 16′ E. longitude, 37° 6′ N. to an undetermined S. limit, about 30° N., covering an area estimated in 1906 at about 1,119,416 square miles, with a population (1911) of 5,563,828, of whom 752,043 were Europeans and 4,740,526 natives. The revenue in 1914 was estimated at £6,854,580, and the expenditure at £6,853,024; the imports from foreign countries in 1912 were valued at £3,809,520, and the exports at £4,795,960. The bulk of the trade is with France, the exports to France amounting to £16,021,800, and the imports from France to £22,685,600; the exports to the U.K. in 1914 were valued at £1,134,572, and the imports from the U.K. at £974,499. The exports consist mainly of wine, wheat and other cereals, sheep and oxen, skins, fruits, zinc and iron ores, olive oil, phosphates, cork wood, esparto grass, manufactured tobacco, and vegetables. The principal imports from the U.K.

were coal and patent fuel, machinery, cotton oil, cotton tissues, tin plates, clothing, and prepared skins. Iron, copper, quicksilver, zinc, and lead mines are being worked. In 1913 there were 2,793 miles of railroad open for traffic; and in 1914 the number of ships engaged in foreign trade entering and clearing Algerian ports was 8,336, of a net tonnage of 10,635,271 tons, of which the percentage of British vessels was fully 21 per cent. The principal town is Algiers, the capital (population, 1911, 172,397), a most important coaling station and much frequented as a health resort; other large towns are Oran, Constantine, Bône, and Tlemçen. *Governor-Gen.*, M. Lutaud.

CAPITAL, Paris. Population (1911), 2,846,986.

BRITISH EMBASSY.

Embassy, 39 Faubourg St. Honoré.
Ambassador Extraordinary and Plenipotentiary, His Excellency Rt. Hon. Lord Bertie of Thame, P.C., G.C.B., G.C.M.G., G.C.V.O. (1905) £11,500

FRENCH COLONIES.

The Colonial possessions of the French Republic have a total area of 4,084,410 square miles, including Algeria and Morocco. The population of this vast area is estimated (1911) at 54,730,039.

In ASIA.—*French India* includes Pondicherry, on the Coromandel coast; Chandernagore, on the Hooghly; Karikal, in the Cauvery delta; Yanaon, in the Godavery delta; and Mahé, on the Malabar coast—the total area being 200 square miles with an estimated population of 277,700. *French Indo-China* comprises the possession of Cochin-China and the four protectorates of Cambodia, Annam, Tonkin, and Laos. In 1898–9 the port of Kwang-Chow-Wan was also acquired on lease from China. The capital is Hanoi, in Tonkin, and the total area is 309,979 square miles, with a population (1912) estimated at 16,600,000.

In AFRICA.—*Algeria* (*see* above) is an integral part of France. *Morocco* (*see* p. 748), is now predominantly French. *Tunis* has been a French protectorate since 1881. *French West Africa* extends from Mauritania to Dahomey, and has a total area of 1,509,733 square miles, and a population of 11,344,076. It consists of *Senegal* (74,000 sq. ms., pop. 1,250,500), capital, St. Louis; *Upper Senegal Niger* (304,000 sq. ms.), and the *Niger Military Territory* (533,000 sq. ms.), which have a total population of about 6,036,200; *French Guinea* (92,600 sq. ms., pop. 1,737,350); *Ivory Coast* (126,100 sq. ms., pop. 1,216,300); and *Dahomey* (38,000 sq. ms., pop. 878,500); while the hinterland of these colonies forms the *French Sahara*, which has an estimated area of 924,160 square miles and a population of about 450,000. *French Equatorial Africa* consists of the *French Congo* (513,000 sq. ms., pop. 9,000,000). *French East Africa* consists of the *Somali Coast* (46,300 sq. ms., pop. 208,000) and of the large island of *Madagascar* (226,000 sq. ms., pop. 3,153,500) with its dependencies (Réunion, and the Mayotte-Comoro Islands). Off the south-east coast are the uninhabited islands of St. Paul, Kerguelen, and Amsterdam. The total area of French Africa is thus 3,812,200 square miles, with an estimated population of 39,948,300.

In AMERICA.—Off the south-east coast of Newfoundland are two small groups of islands, of which the largest are St. Pierre and Miquelon. In the West Indies, Martinique and Guadaloupe (with Basse Terre, Marie Galante, Ile des Saintes, Petite Terre, St. Bartholomew, and St. Martin); and in South America, Cayenne or French Guiana. The total area of French possessions in North and South America is 35,320 square miles, with a population of 428,850.

In AUSTRALASIA.—New Caledonia (7,200 sq. ms., pop. 50,500) is a large island with many dependencies, and the Society Islands (Tahiti, &c.) and other islands have a total area in the Pacific Ocean of 8,378 square miles, with a population estimated at 81,100. The New Hebrides are under joint Franco-British administration.

THE GERMAN EMPIRE.

**Emperor*, William II. (King of Prussia), son of the Emperor Frederick III. and the Empress Victoria, Princess Royal of Great Britain. *Born* 27 Jan., 1859; *succeeded* his father 15 June, 1888; *married*, 27 Feb., 1881, Princess Augusta Victoria of Schleswig-Holstein, *born* 22 Oct., 1858.

Heir Apparent, H.I. and R.H. Crown Prince William, *born* 6 May, 1882; married (1905) H.R.H. Cecilie of Mecklenburg-Schwerin, and has issue.

Imperial Chancellor and Prussian Premier, Dr. von Bethmann-Hollweg.

Interior, Dr. Delbrück.

Foreign Affairs, Herr von Jagow.

Colonies, Dr. Solf.

Navy, Admiral von Tirpitz.

Justice, Dr. Lisco.

Imperial Treasury, Dr. Helferich.

Posts and Telegraphs, Herr Kraetke.

President, Imperial Railways Dept., Dr. Breitenbach.

Foreign Ambassadors.

German Ambassador to Austria, Herr von Tschirschky und Bögendorff; *Italy*, Herr von Flatow; *Turkey*, Prince von Hohenlohe-Langenberg; *U.S.A.*, Count von Bernstorff.

The Empire, according to the Constitution of 16 April, 1871, is a Confederate League, bearing the name German Empire, under the hereditary presidentship of the King of Prussia, who holds the title of German Emperor, and represents the Empire in all matters affecting international law; in the name of the Empire he declares war and makes peace, concludes alliances and treaties with foreign States, and accredits and receives Ambassadors. Except to repel an attack on the territory or the coasts of the League, the Emperor cannot declare war in the name of the Empire without the consent of the Federal Council, *Bundesrat*, which represents the sovereignty of the Federated States of the Empire. The consent of the Federal Council and Reichstag is necessary in regard to certain specified treaties (cf. Art. 4 of the Constitution). The Emperor has the right to summon, open, adjourn, and close the Reichstag. The Federal Council and Reichstag must be summoned to meet every year; the Reichstag cannot be summoned without the adherence of the Federal Council. All Bills are brought before the Reichstag in the name of the Emperor after acceptance by the Federal Council. Laws are promulgated by the Emperor in the name of the German Empire after acceptance by the Federal Council and the Reichstag. All edicts and orders of the Emperor made in the name of the Empire must be countersigned by the Chancellor, who is thereby responsible for them. The Emperor is the *Bundesfeldherr*, or Federal Commander-in-Chief of the whole German Army. In time of war he holds supreme command: in time of peace the Kings of Bavaria, Saxony, and Württemberg retain their sovereign rights as heads of their respective armies. In time of peace the Bavarian army administration is wholly independent of that of the rest of the German army, and only falls under the direct command of the Emperor when the army is

* *See also* p. 117.

mobilised for war. The rights of the Kings of Saxony and Württemberg in time of peace are not quite so extended as those of the King of Bavaria; but their armies remain distinct and form separate army corps. The contingents of all the other Federal States are under the direct command of the King of Prussia, and under Prussian administration. The troops of all the Federal States swear loyalty to their respective sovereigns and obedience to the orders of the Emperor—in the case of Bavaria this obedience is limited to war-time. On the other hand, the German Navy is Imperial (*kaiserlich*), and the Emperor as such is the supreme Admiral-in-Command of the Imperial German Navy in peace as well as war. The Reichstag, or Imperial Diet, consists of 397 Deputies; the original idea was that there should be one deputy to every 100,000 inhabitants of the Empire. The Reichstag sits for a period of five years, unless previously dissolved by the Emperor. Amongst the matters belonging to the jurisdiction of the Empire are all those that refer to the army and navy; the common, civil and penal law of the Empire; posts and telegraphs (excluding Bavaria); inland navigation; the Customs of the Empire; weights and measures; coinage; banking; patents; copyright; foreign trade; the German mercantile marine; the Press; everything relating to the right of forming corporations; police; sanitation; colonisation. The railways, as a result of the defeat of Bismarck's plan to imperialise them, remain subject to State legislation; but the Constitution (Art. 42) requires that they shall be administered as a homogeneous network, and this aim, as regards, rates, regulations, rolling-stock, etc., has to a large extent been achieved. The movement to imperialise the railways still exists, but makes little progress. A majority of the Federal Council and Reichstag is necessary, and also sufficient, for the validity of a law. The laws of the Empire take precedence of the laws of the Federated States within the scope of the Constitution of the Empire; they are compulsory on all Governments of the Empire.

The German Empire has a total area of 208,780 square miles, and consists of the following 26 States:—Prussia (including Lauenburg and —since 1890—Heligoland); Bavaria; Saxony; Württemberg; Baden; Hesse; Mecklenburg-Schwerin; Saxe-Weimar; Mecklenburg-Strelitz; Oldenburg; Brunswick; Saxe-Meiningen; Saxe-Altenburg; Saxe-Coburg-Gotha; Anhalt; Schwarzburg-Sondershausen; Schwarzburg-Rudolstadt; Waldeck; Reuss (elder line); Reuss (younger line); Schaumburg-Lippe; Lippe-Detmold; Reichsland (Alsace-Lorraine); Lübeck; Bremen; Hamburg.

The census of 1910 shows a total population of 64,925,993, of whom 32,031,967 are males and 32,871,456 females.

The religious confessions were divided in 1910 as follows:—39,991,421 Protestants, 23,821,453 Roman Catholics, 283,946 Christians of other categories, 615,021 Jews, and 214,152 adherents of other religions, or unknown.

There were in 1900 4,231,129 persons residing within the limits of the Empire who spoke a non-German language, viz.:—80,361 Dutch, 20,677 Frisians, 141,061 Danish (and Norwegians), 8,998 Swedish, 20,217 English, 211,679 French, 11,841 Walloons, 65,961 Italians, 2,059 Spanish, 479 Portuguese, 3,086,489 Poles, 142,049 Massurians, 100,213 Kassubians, 93,032 Wends, 64,382 Moravians, 43,016 Czechs, 9,617 Russians, 106,305 Lithuanians, 8,158 Hungarians, 14,535 not above specified.

There are 48 large towns with over 100,000 inhabitants, and of these 33 are in Prussia, 4 in Saxony, 3 in Bavaria, 2 in Baden, and 1 each in Württemberg, Hesse, Reichsland, and Brunswick, while two of the three Hanse Towns also exceed 100,000.

The educational system is remarkable for the ease with which it meets the requirements of every social class. Its efficiency is best exemplified by the annual military recruiting statistics, which in 1910 disclosed a proportion of only ·02 p.c. of illiterate recruits. It is, moreover, practically homogeneous in all branches throughout the empire. The Prussian administration may be cited as typical, comprising (i.) a general control by the Minister of Public Instruction over all educational establishments, public or private, save those special schools dependent on other ministries, (ii.) a provincial organisation charged with management of public elementary schools, and (iii.) Special Provincial Boards charged with the management of Secondary and Normal Schools, their curricula, appointment of teachers, and leaving examinations. (i.) *Primary: Comp.* and *free*, age 6–14. Average attendance, 94 p.c. Maintained by local taxation, with State grants. (ii.) *Secondary:* Evening continuation schools for children of working classes; city intermediate schools in two grades; gymnasia (some State-maintained) preparing for university and learned professions with a 9-yrs. course. The standard to qualify for military service as a 1 yr. volunteer is that for advancement from the lower to the upper second class of a State gymnasium; progymnasia, similar, but lacking the highest class of the gymnasia; Real gymnasia confining classical instruction to Latin; Real progymnasia similar, but lacking higher classes of the foregoing; Oberrealschulen and Realschulen making a special feature of modern languages; Lehrer-Seminarien and Fachschulen supplying specialised instruction. Private institutions are comparatively few. For girls, special Töchterschulen (high schools). Here private establishments predominate. (iii.) *Special Schools* are very numerous throughout the empire, special attention being devoted to agriculture, commerce, mining, forestry and music. *Polytechnica* grant degrees in engineering, &c. *Secondary Education* generally is neither free nor comp., but abatement or remission of charges is discretionary. (iv.) *Universities*, State-maintained and administered, are: Berlin, Bonn, Breslau, Erlangen, Freiburg, Giessen, Göttingen, Greifswald, Halle, Heidelberg, Jena, Kiel, Königsberg, Leipzig, Marburg, München, Münster, Rostock, Strassburg, Tübingen, and Würtzburg.

EMIGRATION.—At the commencement of the nineteenth century few Germans emigrated, but about fifty years afterwards there was a strong desire to leave the Mother Country. Out of thirty millions of emigrants from Europe in the nineteenth century Germany contributed about five millions, or one-sixth of the whole number. The highest figure attained in one year was that of 1881 (220,902), but the numbers of oversea emigrants are now seldom above 30,000, the figure for 1913 being 25,843.

PRODUCTION AND INDUSTRY. — Germany is becoming more and more a manufacturing country. In 1907, 32·6 per cent. of the popu-

lation were supported by agriculture, 37 per cent. by industry and mining, 11·5 per cent. by trade and traffic. Of the total area in 1907, 78,632,140 acres were under cultivation, and 34,272,141 acres were woods and forests. Germany supports about nine-tenths of her population by her own produce. The mineral produce was valued in 1912 at £592,250,000, and included 190,109,440 tons of coal, 87,233,084 of lignite, and 28,607,903 of iron ore; rock-salt, lead-ore, gold and silver ore, graphite, asphalt, petroleum, Epsom-salts, boracite, tin-ore, quicksilver-ore, antimony-ore, cobalt-ore, nickel-ore, arsenic-ore, manganese-ore, bismuth-ore, uranium-ore, wolfram-ore, pyrites, vitriolic-ore, and alum-ore are also worked. Crefeld, Elberfeld-Barmen, Mühlhausen, Chemnitz, and the provinces of Westphalia and Silesia are the great centres of the textile industries.

MERCANTILE MARINE.—On January 1st, 1913, the Mercantile Marine consisted of 2,098 seagoing steamers of 17·65 register tons and upwards (4,380,348 tons gross register), and of 2,420 sailing vessels (447,870 tons gross register). The number of seamen in the German Mercantile Marine on January 1st, 1913, was 77,746 (January 1st, 1912, 75,130). Germany now ranks second in the list of maritime countries. There were completed in 1912 at German yards for German firms, 659 sea-going ships of 383,090 tons gross, and at German yards for foreign firms, 124 seagoing ships of 31,238 tons gross.

COMMUNICATIONS.—The total length of the *Railroads* in the Empire in 1913 was 37,823 miles, of which about 92 per cent. belong to the different States. There are 1,500 miles of inland canals and 1,600 miles of ship canals. The number of registered automobiles and motor cycles (January 1, 1913) was 77,789.

IMPERIAL POST (including Bavaria and Württemberg, 1911):—Length of telegraph lines, 228,600 kilometres (length of wires, 1,907,200 kilometres); telegrams handed in, 49,533,000; post offices, 41,415; telegraph offices, 50,013; wireless stations, 14; telephone call-stations, 37,970; letters delivered, 5,994,300,000; cash on delivery orders, £640,100,000; money orders, £4,628,500,000; telegrams despatched, 49,533,000; telegrams received, 49,643,000. The number of employés in the service of posts, telegraphs, and telephones was 310,363.

DEFENCE. — *The Army.* — The remarkable military activity of the German Empire in recent years culminated in the Law of 1913, of which the main principles were (1) to increase substantially the annual recruit quota; (2) to anticipate, complete, and enhance the operations of the Laws of 1912 and 1911; and thereby to increase largely the Peace Establishment of units, to diminish the reliance placed upon Reserve elements, to add some necessary formations, and to lower the average age of the mobilised Field Army. *By these processes the period necessary for mobilisation will be curtailed very materially, and the readiness of the Field Army for action will be perfected—results of deeper significance than the mere numerical increase. The War Chest* (cash immediately available for emergencies of mobilisation) is increased from £6,000,000 in gold to £12,000,000 in gold and £6,000,000 in silver. Recruits join either (1) Active Army, 2 or 3 yrs.; *then* Active Reserve, 5 or 4 yrs., 2 trgs., each 8 weeks; *then* Landwehr, 1st Ban, 5 or 3 yrs., 2 trgs., each 14 days (for dismtd. branches only); *then* Landwehr, 2nd Ban, to age 40; no trg. *Then* [Landsturm, 2nd Ban, to age 45]. *Or* (2), Ersatz Res., 12½ yrs., 3 trgs. of 10, 6, and 4 wks.; *then* [Landsturm, 1st Ban, to age 39, and, 2nd Ban, to age 45]. New Law provides for progressive increase of *Peace Establishment*, which, by the end of 1915, will be (*for Active Army only*) 30,000 offrs., 10,000 officials, 18,000 (or more) one-year volunteers, 771,000 others. *War Strength of Field Army, First Line*, may be 1,500,000; organised *Landwehr*, 750,000. In all, some 5,400,000 *fully-trained* men were available in 1915, and little or no reliance was placed upon partly-trained *personnel*. Ersatz Reserve training has probably been discontinued. About £60,000,000 was estimated for 1914.

The Navy.—46 battleships, 7 battle cruisers, 9 cruisers, 43 light cruisers (6 building), 133 destroyers (12 building), 80 torpedo boats, 24 submarines (14, or more, building).

OLD AGE AND INFIRMITY INSURANCE.—The German scheme of social legislation gives all subordinate bread-winners in the Empire a legal right to pecuniary subvention when unfitted for work through sickness, accident, premature infirmity, or old age. Insurance is compulsory. The National Insurance is based on mutual insurance and self-administration. The Infirmity Insurance Act came into force Jan. 1, 1900. The insured include all persons working for wages or salary as workpeople, artisans, journeymen, apprentices, domestic servants, laundresses, dressmakers, sempstresses, housekeepers, charwomen; overseers, foremen, engineers, assistants, clerks and apprentices in merchants' offices (excepting assistants and apprentices in chemists' shops), schoolmasters, schoolmistresses, tutors and governesses—in so far as the incomes do not exceed £100—including foreigners working in Germany under these categories. Pensions for premature infirmity are given to insured persons when unfit for work; old age pensions to all insured persons on attaining the age of 70, though still capable of work. A comprehensive project of reform of the State insurance legislation became law in 1911. The new law codifies previous legislation, establishes new Insurance Authorities, reduces working-class influence in the Accident Insurance organisations, provides pensions for widows and orphans, and makes other changes of importance. Another Bill extending Insurance benefits to private officials, clerical employés and others above the class of manual workers, became law in 1911.

GERMAN COLONIES.

The German Colonies, at the commencement of the war, had a total area of 1,134,239 sq. miles, with a population of about 14,890,000, of whom 24,170 (including garrison and police) were whites. Of these whites about 18,500 were settled Germans.

AFRICA.—*Togoland:* Area, 33,659 sq. miles; population about 1,000,000. Capital, Lome. Budget, 1912: Receipts, £152,000; expenditure, £176,000; trade (1910), imports, £573,300; exports, £361,100.—*Cameroon:* Area, 295,000 sq. miles; population, 3,500,000. Capital, Buea. Budget for 1912: Receipts, £361,500; expenditure, £882,500; trade (1912), imports, £1,712,100; exports, £1,165,000.—*German South-West Africa:* Area, 322,348 sq. miles; population, 120,000. Capital, Windhoek. Budget, 1912: Receipts, £860,500; expenditure, £2,250,000; trade (1912), imports, £2,265,000; exports, £1,425,000. On July 9, 1915, Gen. Botha accepted the unconditional surrender of all the German forces in South-West Africa.—*German East Africa:* Area, 384,079 sq. miles; population, 7,645,000. Capital, Dar-es-Salaam. Budget, 1912: Receipts, £624,000, of which State aid, £151,135; expenditure, £1,828,500; trade (1912), imports, £2,295,000; exports, £1,570,900.

PACIFIC.—*German New Guinea:* Total area, 90,000 sq. miles; population, 463,300. Capital, Rabaul. Trade (1910), imports, £194,500: exports, £181,250.—*Solomon, Caroline, Pellew, Marianne, and Marschall Islands:* Area, 5,160 sq. miles, population, 122,000. Capitals, Ponape and Yap. Budget, 1912: Receipts (with New Guinea), £78,000; expenditure (with New Guinea), £138,000; trade (1910), imports, £117,750; exports, £502,100.—*Samoa:* Area, 1,050 sq. miles; population, 35,000. Capital, Apia. Budget, 1912: Receipts, £43,500; expenditure, £47,500; trade (1910), imports, £173,100; exports, £176,700.

ASIA.—*Kiao-Chao* (capitulated to an Anglo-Japanese force in November, 1914): Leased for a period of 99 years from China in 1898. Area, 193 sq. miles; leased territory and sphere of interest, 2,750 sq. miles; population, 84,000. Chief seat of government, Tsingtau. Budget, 1912: Receipts, £312,000; expenditure, £732,000; trade (1910), imports, £2,500,000; exports, £2,500,000; the ocean shipping entered in 1913 being 936 vessels of 1,309,294 tons. The German garrison in Kiao-Chao consisted of 92 officers, 2,374 German non-commissioned officers and men, and one battalion of the East Asiatic Garrison brigade. It was further agreed that within a 50-kil. zone (31 English miles) from all points of the leased territory the Chinese Government should no longer, for the space of 99 years, be entitled to take any steps without previous authorisation from the German Government. Germany also received mining and railway concessions in the province of Shan-Tung, which is called "the sphere of influence," area about 2,750 English sq. miles, population 84,000. The leased territory, as it is called, comprises the bay up to high-water mark, its islands, and the north and south tongues of land at the mouth of the harbour.

Germany's share in the trade with her colonies in 1912 was about 36 per cent.

States of the German Empire.

KINGDOM OF PRUSSIA.

King, William II., German Emperor (*q.v.*).
President of the Ministry and Minister for Foreign Affairs, Dr. von Bethmann-Hollweg.
Interior, Herr von Dallwitz.
Finance, Dr. von Lentze.
War, Lt.-Gen. Wild von Hohenborn.
Public Works, Herr von Breitenbach.
Agriculture, Woods and Forests, Herr von Schorlemer-Liesser.
Trade and Commerce, Herr Sydow.
Instruction and Worship, Herr von Trott zu Solz.
Minister of Justice, Dr. Beseler.

Prussia comprises the larger portion of Germany, and consists of 13 provinces, with a total area of 134,558 English square miles and a population in 1910 of 40,165,219.

Of the total population 19,847,725 are males and 20,317 494 females. There are 33 towns with over 100,000 inhabitants.

Prussia possesses a large number of navigable rivers intersecting the country—viz., the Niemen, Pregel, Vistula, Oder, Elbe, Weser, and Rhine. The coasts of the Baltic and North Seas form a number of gulfs and bays. The principal mountains are the Harz and the Giant Mountains, the latter reaching an altitude of 5,255 feet. The forests are extensive, occupying an area of nearly 20,435,491 acres, chiefly consisting of fir. Minerals consist of iron, copper, lead, alum, nitre, zinc, cobalt, sulphur, nickel, arsenic, baryta, amber, agate, jasper, onyx, &c., and, to a small extent, silver. Salt (from the brine springs of Prussian Saxony) is abundant, also coal. Metallic ores, salt, precious stones belong partially, and amber totally, to the Crown. Agriculture and the rearing of cattle are the industries employing the largest number of persons, but Prussia has long ceased to be a mainly agricultural State. Wheat, rye, oats, barley, peas, millet, rape-seed, maize, linseed, flax, hemp, tobacco, hops, &c., are extensively cultivated. Prussia's manufactures comprise practically all branches. The cotton works are extensive, and there are numerous manufactories of silk, woollen, mixed cotton and linen fabrics, including shawls, carpets, &c., and woollens, with leather, earthenware, glass, paper, and tobacco manufactures, as well as metallurgical works of great importance and large output. Brewing is a business of great importance.

Revenue (Budget)	£187,248,000	£201,133,000
Expenditure do.	187,248,000	201,133,000
Total debt, 31 March	476,583,000	471,443,000

CAPITAL, Berlin. Population (1910), 2,070,695.

KINGDOM OF BAVARIA.

King, Ludwig III., *born* 7 Jan., 1845; *proclaimed* King, 5 Nov., 1913; *married*, 1868, the Archduchess Maria Theresa, of Austria-Este.
Heir Apparent, Crown Prince Rupprecht, *born* 18 May, 1869; *married*, 1900, Marie Gabriella, Duchess in Bavaria, and has issue, two sons.
Ministers of State—President and Minister of Foreign Affairs, Dr. Freiherr von Hertling; *Justice*, Dr. von Thelemann; *Interior*, Dr. Freiherr von Soden-Fraunhofen; *Instruction*, Dr. von Knilling; *Finance*, Dr. von Breunig; *Communications*, von Seidlein; *War*, Gen. Freiherr Kress von Kressenstein.

The second Kingdom in size and population of the German Empire. It is divided into two unequal parts. The eastern portion, comprising eleven-twelfths of the whole, is situated between 47° 16′—50° 34′ N. lat. and 9° 01′—13° 50′ E. long.; the western part, forming the Palatinate, on the left bank of the Rhine. Bavaria is divided into eight circles (Upper Bavaria, Lower Bavaria, Palatinate, Upper Palatinate, Upper, Middle, and Lower Franconia, and Swabia), comprising an area of 29,286 square miles, and a population (in 1910) of 6,887,291. The capital (596,467) and Nuremberg (333,142) are the largest towns. Bavaria contributes three *corps d'armée* to the forces of the German Empire; their strength is fixed at 69,143 men on a peace footing. The rivers are the Danube, Rhine, Main, Lech, Isar, and Inn. Its forests are extensive, covering nearly a third of the country; the soil is highly productive, wheat, rye, oats, and barley being the chief products; buckwheat and maize are also grown, and tobacco is one of the staple articles. Wine is produced in the Palatinate, in Lower Franconia, and in Middle Franconia. The hop-plant is most extensively cultivated. The chief minerals are salt, coal, iron, copper, and pyrites; manganese is found in some places. Many important manufactures are carried on. The brewing of beer is carried to great perfection. The chief imports are sugar, coffee, woollens, silks, stuffs, drugs, hemp, cotton, tobacco, and flax; the chief exports are timber, grain, wine, hops, beer, leather, glass, jewellery, &c.

Budget, 1912–1913 ..... £33,810,590
Public debt, 1 Jan., 1914 (including railway debt, £97,033,260) 123,931,980
CAPITAL, Munich. Population (1910), 596,467.

KINGDOM OF SAXONY.

King, Frederic Augustus III., *born* 25 May, 1865; *suc.* 15 Oct., 1904.
Heir Apparent, his son, Crown Prince George, *b.* 15 Jan., 1893.
Ministers of State, Freiherr von Hausen, Dr. Beck, Graf Vitzthum von Eckstädt, R. von Seydewitz, Dr. Nagel.

A Kingdom of Germany, the third in importance and population of the German Empire, comprising an area of 5,856 English square miles, with a population (1910) of 4,806,661. More than one-half of the surface is arable, and has always been in a high state of cultivation, producing the usual cereals and leguminous plants, with rape, buckwheat, flax, and fruits. The forests supply timber of excellent quality; minerals are rich and abundant (coal, silver, tin, bismuth, cobalt, iron, zinc, lead, nickel, arsenic, &c., besides marble, porcelain, earth, and various gems); special manufactures of Saxony are:—Machinery, cottons, worsted yarns, soft wool tissues, carriages, furs, clothing, jute, furniture stuffs, hosiery, gloves, and other knitted goods, laces, embroideries, curtains, paper, wood and straw pulp, bottle glass, musical instruments, chocolates, sweets, cigars, and Meissen porcelain. The imports are chiefly corn, wine, salt, cotton, silk, flax, hemp, wool, coffee, tea, &c. Its chief towns are Dresden (pop. 551,697), Leipzig (pop. 587,635), the great book-market, with, next to those of Berlin and Munich, the most frequented University of Germany (having 5,925 matriculated students in 1912–13); Freiberg (pop. 36,237), in the mining district; Plauen (pop. 121,272); Zwickau (pop. 73,542), and Chemnitz (pop. 287,807), the Manchester of Saxony.

Revenue and expenditure, 1912-13 ... £22,661,133
Debt (railways), 1912 43,055,495
CAPITAL, Dresden. Pop. (1910), 551,697.

KINGDOM OF WÜRTTEMBERG.

King, William II., *born* 25 Feb., 1848; *succeeded* 6 Oct., 1891; *mar.* (1) Princess Marie of Waldeck (*died* 30 April, 1882); (2) Princess Charlotte of Schaumburg-Lippe.
Heir Presumptive, Duke Albrecht.
President of Ministry, Dr. von Weizsäcker.

A Kingdom of South Germany, with an area of 7,534 English square miles, and a population (in 1910) of 2,437,574, of whom 30 per cent. are Roman Catholics. Württemberg furnishes the 13th Corps to the German Army, consisting of 24,523 men on a peace footing. It possesses rich cultivated fields, orchards, gardens, and hills covered with vines; the forest, grain, and pasture-land being nearly equally distributed throughout. Spelt, wheat, rye, oats, barley, hemp, hops, potatoes, beans, maize, and turnips are the principal agricultural products. The minerals, consisting chiefly of salt, iron, granite, limestone, ironstone, fireclay, &c., abound in the kingdom; mineral springs are also numerous. The principal rivers are the Neckar and the Danube. The manufactures generally are linen, woollen and cotton fabrics, carpets, paper, leather, gunpowder, firearms, tobacco, iron and steel goods, pianos, clocks, pottery, cabinet work, &c. There are also many oil mills, breweries, and brandy distilleries. The principal exports are grain, cattle, wood, gunpowder, firearms, pianos, clocks, salt, oil, leather, woollen, hosiery, cotton and linen fabrics, stays, beer, wine, &c.

	1912.	1913.

Grand Duchies.

BADEN, Grand Duchy of.

Grand Duke, Frederick II., *born* 9 July, 1857; *m.*, 20 Sept., 1885, Princess Hilda of Nassau, *born* 5 Nov., 1864; *Grand Duke*, 28 Sept., 1907.
Heir Presumptive, Max, *b.* 10 July, 1867.
President of Ministry, Dr. Freiherr von Dusch.

A State of the German Empire, situate in the south-western part. The Rhine forms its southern and western boundary, separating it from Switzerland and Alsace. A great part of the surface is mountainous, and includes the

Black Forest and Odenwald. It comprises an area of 5,888 square miles (3,238 cultivated—corn, wine, fruit, potatoes, tobacco, hemp, hops, and chicory being the chief produce—and 2,283 forests). The population in 1910 was 2,143,000, nearly two-thirds of whom were Catholics, more than one-third Protestants, and 25,896 Jews. Mannheim (193,902), Karlsruhe (134,313), Freiburg (83,324), Pforzheim (69,082), and Heidelberg (56,016) have over 50,000 inhabitants. Principal industries are agriculture and manufactures (cigars, cotton and silk stuffs, straw hats, brushes, trinkets, clocks, chemicals, paper, and machinery). There are 1,262 miles of railway, of which 1,002 miles belong to the State, constructed at a total cost of £40,466,000.

Budget, 1913 (including railways).....£12,707,000
Debt, Jan. 1, 1913 (only railways).....£ 27,600,000

CAPITAL, Karlsruhe. Population (1911), 134,313.

HESSE, Grand Duchy of.

Grand Duke, Ernest Louis, *born* 25 Nov., 1868; *suc.* 13 Mar., 1892; *m.*, 2 Feb., 1905, Princess Eleonore zu Solms-Hohensolms-Lich, *b.* 17 Sept., 1871.
Heir Apparent, George, *b.* 8 Nov., 1906.
President of Ministry, Dr. K. Ewald.

A central State in the west of Germany, comprising two disconnected territories, nearly equal in size, containing an area of 2,966 square miles, and a population (1910) of 1,282,051, of whom two-thirds were Protestants. The surface of the eastern portion of both parts is mountainous. The country is fertile, and agriculture is in a flourishing condition. Fruit is abundant, and the vine highly cultivated. Darmstadt, Mainz, and Offenbach have over 50,000 inhabitants.

Budget, 1913 ..... £4,321,774
Public debt, 1913 (mostly for railways) 21,976,705

CAPITAL, Darmstadt. Population (1910), 87,089.

MECKLENBURG-SCHWERIN, Grand Duchy of.

Grand Duke, Frederick Francis IV., *b.* 9 April, 1882; *suc.* 10 April, 1897; *mar.*, 7 June, 1904, Princess Alexandra of Brunswick and Luneburg, *born* 29 Sept., 1882.
Heir Apparent, Friedrich Franz, *born* 22 April, 1910.
Minister of State, K. H. L. Graf von Bassewitz-Levetzow.

Comprises an area of 5,135 square miles on the Baltic, with a population of 639,958. The Legislative power is vested in representatives of the towns, and of the Knights' estates. Revenue (1912–13), £2,429,430; exp., £2,402,135; debt (1912), £6,776,950. Capital, Schwerin; pop. 42,510.

MECKLENBURG-STRELITZ, Grand Duchy of.

Grand Duke, Adolphus Friedrich II., *b.* 17 June, 1882.
Heir Presumptive, Charles Michael, *born* 17 June, 1863.

Consists of two detached parts, separated by Mecklenburg-Schwerin. Area, 1,131 square miles; population, 106,442. No proper budget. Finances in good condition. Capital, Neu-Strelitz; pop. 11,993.

OLDENBURG, Grand Duchy of.

Grand Duke, Frederic Augustus, *b.* 16 Nov., 1852; *suc.* 13 June, 1900; *married* (1), Feb. 18, 1878, to the late Princess Elizabeth (second daughter of the late Prince Frederick Charles of Prussia), who *died* 28 August, 1895; and (2) to Princess Elizabeth of Mecklenburg-Schwerin, *born* 10 August, 1869.
Heir Apparent, Nicholas, *b.* 10 August, 1897.

Situate on the North Sea and the Weser. Area, 2,482 square miles; pop. 438,856; rev. (1910), £697,670; exp., £654,792; debt, £3,692,361. Capital, Oldenburg; pop. 28,565.

SAXE-WEIMAR EISENACH, Grand Duchy of.

Grand Duke, William Ernest, *b.* 10 June, 1876; *suc.* 25 January, 1901; *married*, 4 Jan., 1910, Theodora, Duchess of Saxe-Meiningen.
Heir Apparent, William Ernest, *b.* 28 July, 1912.
Minister of State, Dr. Rothe.

Area, 1,397 sq. miles; pop. (1910), 417,149; rev. and exp. (1911–13), £612,769. There is a British and American church at the capital. Capital, Weimar; pop. (1910), 34,582.

Duchies.

ANHALT, Duchy of.

Duke, Friedrich II., *born* 19 August, 1856; *succeeded* 24 Jan., 1904; *married*, 2 July, 1889, Princess Marie of Baden; *born* 26 July, 1865.
Heir Presumptive, Prince Edward, *born* 18 April, 1861; *married*, 6 Feb., 1885, Princess Louise of Saxe-Altenburg.

A Duchy of Central Germany, in two principal portions, surrounded by Prussian Saxony, containing 906 square miles and a population of 331,128. Budget, 1913–14, £862,745.
Capital, Dessau. Population, 56,605.

BRUNSWICK, Duchy of.

Duke, Ernest Augustus, *born* 17 Nov., 1887; *mar.*, 25 May, 1913, H.R.H. Princess Victoria Louise, daughter of the German Emperor; *proclaimed* 3 Nov., 1913.

A State of Northern Germany, consisting chiefly of three detached parts, comprising an area of 1,418 English square miles, and a population (1910) of 494,339, of whom 464,175 were Protestants, 25,888 Roman Catholics, and 1,757 Jews. Budget, 1913–1914: Income, £768,440; expenditure, £744,980; debt, £2,019,735; reserve fund, £2,081,224.
Capital, Brunswick; population (1910), 143,552.

SAXE-ALTENBURG, Duchy of.

Duke, Ernest, *b.* 31 Aug., 1871; *suc.* 7 Feb., 1908; *mar.*, 17 Feb., 1898, Princess Adelheid of Schaumburg-Lippe, *b.* 22 Sept., 1875.
Heir Presumptive, Geo. Moritz, *b.* 13 May, 1900.

Area, 512 square miles; population (1910), 216,128, of whom over 210,500 are Protestants; revenue and expenditure (1911–13), £259,945; debt (1912), £44,372; reserve fund, £286,647. Capital, Altenburg; pop. (1910) 39,976.

SAXE-COBURG-GOTHA, Duchies of.

Duke, Charles Edward (H.R.H. Duke of Albany), *born* 19 July, 1884; *mar.*, 11 Oct., 1905, Prss. Victoria Adelaide of Schleswig-Holstein-Sonderburg-Glücksburg, and has issue 2 sons and a daughter; *suc.* 30 July, 1900; assumed government 19 July, 1905.
Heir Apparent, H.R.H. Prince Johann Leopold, *born* 2 Aug., 1906.
Minister of State, Herr Dr. von Richter.

A State consisting of two principal and several smaller detached portions, with an area of 763 English sq. miles, and a population (1910) of 257,177, of whom 250,454 were Protestants.

Capital, Gotha (pop. 39,553). Coburg (the other capital) has 23,789 inhabitants. The common state revenue is set down at £55,216; the state and domain revenues at £240,145 for Gotha and £92,172 for Coburg. At Gotha there is an English church.

SAXE-MEININGEN, Duchy of.

Duke, Bernhard II., *b.* 1 April, 1851; *suc.* Aug., 1914; *mar.*, 1878, Princess Charlotte of Prussia.
Heir Presumptive, Ernest, *b.* 1859; *m.*, 1892, morganatically, Catherine, Baroness von Saalfeld.

Area, 945 sq. miles; pop. (1910), 278,792; rev. and exp. (1912–14), £527,316; debt (1910), £310,950. Capital, Meiningen; pop. (1910), 17,131.

Principalities.

LIPPE, Principality of.

Prince, Leopold IV., *b.* 30 May, 1871; *m.* Bertha, of Hesse-Philippshalt.
Heir Apparent, Ernest Leopold.

Area, 470 sq. miles; population (1910), 150,937; rev. (1913–14), £142,649; exp., £130,814; debt, £67,799. Capital, Detmold; pop. (1910), 14,295.

REUSS, Elder Line.

Prince, Henry XXIV., *born* 20 March, 1878; *suc.* 19 April, 1902.
Prince Regent, Henry XXVII., *b.* 10 Nov. 1858.

Area, 120 square miles; population (1910), 72,769; revenue and expenditure (1913), £94,000. No debt. Capital, Greiz; pop. (1910), 13,245.

REUSS, Younger Line.

Reigning Prince, Henry XXVII., *b.* 10 Nov., 1858; *suc.* 29 March, 1913; *mar.* Princess Elise of Hohenlohe-Langenburg.
Heir Apparent and Regent, Henry XLV.

Area, 320 sq. miles; pop. (1910), 152,752; rev. (1911–13), £138,965; exp. £138,965; debt (1911), £52,027. Capital, Gera; pop. (1910), 49,276.

SCHAUMBURG-LIPPE, Principality of.

Reigning Prince, Adolphus, *b.* 23 Feb., 1883; *suc.* 30 April, 1911.
Heir Presumptive, Maurice.

Area, 130 sq. miles; pop. (1910), 46,626; rev. and exp. (1910–11), £42,692; debt (1910), £16,516. Capital, Buckeburg; pop. (1910), 5,745.

SCHWARZBURG-RUDOLSTADT, Principality of.

Prince, Gunther, *b.* 21 August, 1852; *suc.* 19 Jan., 1890; *mar.* Princess Anna Louise of Schönburg-Waldenburg.
Heir Presumptive, Günther-Sizzo.

Area, 363 sq. miles; pop. (1910), 100,702; rev. and exp. (1912–14), £168,885; debt (1912), £230,150. Capital, Rudolstadt; pop. (1910), 21,937.

SCHWARZBURG-SONDERSHAUSEN, Principality of.

Prince, Gunther (*see* Schwarzburg-Rudolstadt *above*).

Area, 333 sq. miles; pop. (1910), 89,917; rev. and exp. (1912), £170,887; debt (1913), £306,220 (£115,000 for railways). Capital, Sondershausen; pop. (1910), 7,759.

WALDECK.

Prince, Frederick, Prince of Waldeck-Pyrmont, Count of Rappolstein, Seigneur of Hohenack and Geroldseck, Wasziegen, &c., *born* 20 Jan., 1865; *suc.* 12 May, 1893; *mar.*, 9 Aug., 1895, Princess Bathildis of Schaumburg-Lippe, and has issue 4 children.
Heir-Apparent, Josias George William, *b.* 13 May, 1896.

Area, 438 sq. miles; pop. (1910) 61,707; income and exp. (1913), £75,175; debt, £70,920. Capital, Arolsen; pop. 2,793.

Hanse Towns.

The Free Hanse Towns comprise the three cities of Lübeck, Bremen, and Hamburg, each with a small rural territory, retaining their sovereignty and local self-government, like the other States of the Empire, and are situated in the North of Germany, on the Trave, Weser, and Elbe respectively. Lübeck is situate near the Baltic, and is connected with the Elbe by the Elbe-Trave Canal; its commerce is principally with Denmark, Norway, Sweden, and Russia. Bremen is small, but very prosperous, and only second in commercial importance to Hamburg. It is connected by railway with the outport of Bremerhaven, 35 miles distant, and carries on a very extensive American trade. Hamburg is the great emporium of Germany, and is 65 miles from Cuxhaven, to which port it is connected by railway.

LÜBECK, area 115 sq. miles, pop. 116,599.

Reichsland.

ALSACE-LORRAINE.

Statthalter, Count Carl von Wedel (1907.
Minister of State, Baron Zorn von Bulach.

The "Reichsland" of Alsace-Lorraine (Elsass-Lothringen), which was annexed by France from

the old German Empire between 1648 and 1697, and restored to Germany in 1871, embraces the fertile plain between the Rhine and the Vosges, and stretches beyond these mountains as far as Luxemburg. Wine, tobacco, hops, iron, and coal are among its leading productions, and the cotton industry is most flourishing. There is a Landtag of two chambers, of which the first consists of representatives of the churches, university towns and professional classes, and the second of 60 members elected by secret ballot. The area is 5,605 square miles, divided for administrative purposes into three districts, Ober- and Unter-Elsass and Lothringen. The population in Dec., 1910, was 1,874,014, of whom 965,625 were males and 908,389 females; while 1,428,343 were Catholics, 408,274 Protestants, and 30,483 Jews. French was spoken by about 200,000 persons. Principal towns, Strassburg (pop. 178,891), Mülhausen, and Metz.

Revenue and Expenditure (1912-13)...	£3,508,600
Debt (1912).....(Rentes £65,588)	2,186,300

GREECE.

King of the Hellenes, Constantine, *born* 21 July (3 Aug.), 1868; *succeeded to the throne* 5 (18) March, 1913; *married*, 15 (28) Oct., 1889, to the Princess Sophia, sister of the German Emperor.

Heir Apparent, George, *born* 7 (20) July, 1890.

Prime Minister and Minister of Foreign Affairs (Nov., 1915), M. Skuloudis.

Finance, M. Dragoumis.

Interior, M. Gounaris.

War, Gen. Yanakitsas.

Justice and Communications, M. Rallis.

Education and Religion, J. Tsirimokos.

National Economy and Public Instruction, M. Theotokis.

Marine, Admiral Coundouriotis.

Envoy Extraordinary and Minister Plenipotentiary in London, J. Genadius, 14 De Vere Gardens, Kensington Palace, W.

Secretary, A. Ranagabes.

Cons.-Gen., T. Stavridis, 40 Old Broad St., E.C.

A maritime Kingdom in the south-east of Europe, situate in lat. 35° 50′—41° N. and long. 19° 20′—26° 15′ E., comprising an area (in 1912) of 24,822 square miles, with a population (in 1907) of 2,631,952, and enlarged by the addition of portions of Macedonia, Albania, and Thrace, and by the capture of many of the Turkish islands (in the war of 1912-13), to an estimated area of 43,522 square miles, with a population of close on 5,000,000. The country is composed of a continental portion (the southern part of the Balkan Peninsula), and of islands in the Ægean, Mediterranean, and Ionian Seas. The surface is nearly all mountainous; the coasts are elevated, irregular, and deeply indented. The most important of the fruit trees are the olive, the vine, orange, lemon, fig, almond, citron, pomegranate, and currant-grape. The imports are cotton and other manufactures, coru, timber, cattle, hides, sugar, salt fish, and coal. Its exports consist of currants, figs, olive oil, wine, cognac, tobacco, hides, lead, iron ore, magnesium, emery, marble, and sponges.

Defence.—Service in the Army is universal and compulsory between the ages of 21 and 57. Both the land and sea forces are now in process of reorganisation. The Navy, consisted (July, 1913) of 4 ironclads, 1 modern cruiser, 14 destroyers, 4 corvettes, 13 torpedo-boats, and 2 submarines. In 1912-13 Greece, with the other members of the *Balkan League* (Bulgaria, Montenegro, and Servia), waged a successful war against Turkey, and during the progress of hostilities the island of Crete (*q.v.*) was annexed. Certain islands in the Ægean were occupied by Greek troops, and Salonica and other centres were captured. In 1913 a second war of Bulgaria against the remaining members of the League (and the threat of an invasion by Rumania) ended in a division of the conquered territories that proved to be very favourable to Greece, whose boundaries now extend northwards to those of Albania and Serbia.

Education is free and compulsory, maintained by local taxation supplemented by State grants. Secondary education is somewhat backward, particularly in the country districts. The University at Athens is of some repute.

Communications.—There are 993 miles of railroad open for traffic, and a line of about 70 miles in length is under construction in order to link up with the European system. There is a ship canal cutting through the Isthmus of Corinth, but it is rarely used by foreign vessels. The post offices number 1,150, dealing with 36,000,000 postal packets; telegraphs, 4,951 miles. The mercantile marine consists of 110 sailing vessels above 100 tons capacity, and 298 steamers (449,184 tons).

Guatemala, the most northerly of the Republican States of Central America, is situated in N. lat. from 13° 40′ to 17° 40′, and in W. Long. from 88° 15′ to 92° 30′, and comprises an area of 47,424 square miles, and a population in 1910 of 2,000,000. The Republic is divided into 23 departments, and is traversed from W. to E. by an elevated mountain chain, containing several volcanic summits rising to 13,000 feet above the sea: earthquakes are frequent. The country is well watered by numerous rivers; the climate is hot and unhealthy near the coast, but more temperate and salubrious in the higher regions. About 430 miles of railway were open for traffic in 1911. There were 5,954 kilometres of telegraph and 619 of telephones working in 1908. The chief ports are San José de Guatemala and Champerico on the Pacific, and Livingston and Puerto Barrios on the Atlantic side. The principal export is coffee, other articles being sugar, rubber, hides, bananas, and timber.

The Republic of Haiti is the western or French portion of the island of San Domingo, which, next to Cuba, is the largest of the West India Islands. The area of the republic is 10,200 square miles, with a population estimated at 2,029,700. The mountains are richly and heavily timbered, and susceptible of cultivation nearly to their summits; it is probably the most fertile spot in the West Indies, whilst its harbours, especially Port-au-Prince, offer considerable facilities to foreign trade. The principal productions are coffee, logwood, cocoa, cotton, hides, sugar, honey, gums, these being the chief exports. It is said to contain mines of gold, silver, copper, tin, and iron. Its commercial prosperity has been almost annihilated by repeated revolutions. The principal foreign trade is carried on with the United States, Great and Greater Britain, France, and Germany.

Distance 5,930 miles; transit, 18 to 20 days.

HUNGARY. (*See* p. 704.)

ICELAND (*Danish Dependency*).

Minister for Iceland (*Resident*), Sigurdur Eggerz.
Presidents of Al-thing, Olafur Briem; Stefan Stefenson.

Iceland is a large, volcanic, and treeless island in the North Atlantic Ocean, extending from 63° 23′ to 66° 33′ N. lat., and from 13° 22′ to 24° 35′ W. long., with an estimated area of 40,497 square miles, or greater than that of Ireland. The population was estimated in 1914 at 86,500.

The present constitution was granted in 1904, and the assembly (Al-thing) is more or less controlled by the Government at Copenhagen. The principal products of the island are sheep, cattle, ponies, and fish, and the imports consist of almost all the necessaries of life, the chief items being grain and meal, sugar, coffee, salt, cotton goods, tobacco, spirits, hardware, and timber. Total imports (1913): £928,763; exports, £1,062,677. Iceland is now in direct telegraphic communication with the United Kingdom.

CAPITAL, Reykjavik. Population, about 13,000. Other towns are Isafjorður, Akureyri, and Seydisfjord.

Reykjavik—Consul, A. G. Coates, M.V.O. (resides at Thorshavn, Faroë Islands), £600.
,, *Acting Consul*, E. G. Cable.
,, *Vice-Consul*, Asgeir Sigurdsson.
Seydisfjord—Vice-Consul, Kristjan Kristjansson.
Westmann Islands—V.-Cons., Gisli J. Johnsen.
Transit, 5 days.

ITALY.

King, Victor Emmanuel, *born* 11 November, 1869; *married*, 24 Oct., 1896, Princess Helen of Montenegro; *succeeded to the throne* July 29, 1900.
Heir Apparent, H.R.H. Humbert, Prince of Piedmont, *born* 15 Sept., 1904.
Premier and Interior (1915), Signor Salandra.
Foreign Affairs, Baron Sonnino.
Justice, Signor Orlando.
War, General Zuppelli.
Marine, Vice-Admiral Camillo Corsi.
Public Instruction, Signor Grippo.
Treasury, Signor Carcano.
Finance, Signor Daneo.
Agriculture, Industry, and Commerce, Signor Cavacola.
Public Works, Signor Ciuffelli.
Posts and Telegraphs, Signor Riccio.
Colonies, Signor Martini.
Without Portfolio, Signor Barzilai.

Foreign Ambassadors.

Ambassador to France, Signor Tittoni; *Russia*, Marchese Carlotti; *U.S.A.*, Conte Maschi-Cellere; *Spain*, Conte Bonin.

Ambassador in London, Marquis Imperiali di Francavilla, 20 Grosvenor Square, W.
Councillor, Prince Livio Borghese di Cellere.
1st Secretary, Signor G. E. Cora.
2nd Secretary,
3rd Secretary, Barone P. Arone di Valentino.
Attachés, Signor Raffaele Quariglia; Lieut. Renzo Brusati; Lieut. Marchese V. Doria-Lamba.
Military Attaché, Major Conte E. Greppi, C.B.
Naval Attaché, Count Rey di Villarey, C.B.
Archivist, Cavaliere Catani.
Consul, Marchese Faa di Bruno.
Vice-Consul, Cavaliere P. Righetti.

A Kingdom in the South of Europe, consisting of a peninsula, the large islands of Sicily and Sardinia, the island of Elba, and about 66 minor islands.* It is situate between lat. 36° 38′ 30″—46° 40′ 30″ N. and long. 6° 30′—18° 30′ E., and comprises a total area of 110,623 square miles (91,277 mainland, 19,346 islands), with a population (1911 census) of 34,686,683. The peninsula is traversed throughout its length by the chain of the Apennines; the Alps form its northern limits, dividing it from France. The chief rivers are the Po, the Adige, the Tiber, and the Arno. The principal towns are Rome (579,285), Naples (723,208), Milan (599,200), Turin (427,733), Palermo (341,656), Genoa (272,077), Florence (232,860), Bologna (172,639), Venice (160,727), Catania (211,699), Leghorn (105,322), and Bari (103,522). Its wines are numerous and celebrated, and olives and olive-oil are furnished by Tuscany, Liguria, and the province of Bari; while fruit abounds and is largely exported. The cultivation of silk forms an important agricultural industry. Among the principal minerals are iron, lead, zinc, copper, manganese, and antimony ores, sulphur, gypsum, amianthus, alum, and boracic acid. Silver is found in Sardinia, and some gold in the Alps. Salt is a Government monopoly. In 1914 there were 11,165 miles of railway open for traffic, and 33,451 miles of telegraph line. The sea-going commercial marine (1913) consisted of 839 steamers (762,274 tons) and 4,693 sailing vessels (374,835 tons). The imports chiefly consist of cotton, wheat, coal, coke, chemicals, colonial produce, yarns, jute and manufactured goods, woollens, raw silk, silkworms' eggs and cocoons,

* Italy is also in temporary occupation of a group of Turkish islands lying between Crete and Asia Minor (Rhodes, Carpathos, Cos, Astropalia, &c.) until such time as the Ottoman troops have been removed from Tripoli and Benghazi.

machinery, iron and steel in bars, plates and rails, hardware, raw hides, horses and cows, fixed oils, salt fish, dye-stuffs, tobacco, earthenware, &c. The principal exports are olive-oil, wine, candied citron, sienna earths, pastes, coral, rags, boracic acid, raw and thrown silk, hemp, cattle, straw hats, rice, iron, zinc and copper ores, sulphur, marble, fruit, vegetables, fresh and prepared meats, poultry, chemical products, woods, roots, &c., for dyeing and tanning, artistic works, &c.

In 1914 the produce of the vines amounted to 947,612,000 gallons, and that of the olive crop to 236,324,000 gallons.

The manufactures are woollen, cotton, silk, hemp, and linen yarns and tissues, leathers, straw and felt hats, furniture, chemical products, paper, agricultural and other machinery, prepared meats, artistic works (such as mosaics, pottery, Venetian glass, alabaster ornaments), &c. Sugar is extracted from beet in large quantities for home consumption. There is a large settled and floating population of Americans and English, with churches (one costing £40,000) and chapels belonging to Methodists, Baptists, and others.

Defence.—The *Army* is organised in 12 corps, each of 2 divisions, the first line consisting of 310,000 men; there is, in addition, a considerable active reserve, and a mobile militia of 250,000. In consequence of the outbreak of the war, the effective strength of the Army has been greatly increased. The *Navy* in 1914 included 9 battleships (5 building), 9 armoured cruisers, 11 light cruisers (3 building), 3 scouts, 25 destroyers (10 building), 76 torpedo-boats (24 building), and 12 submarines (8 building). Spezia, the chief naval and military port of the kingdom, is securely fortified.

Education is free and compulsory, and evening continuation classes are also compulsory for military recruits. It is maintained by local taxation and State grants. Secondary education is generally State-maintained, and schools are increasing in number. Several of the Universities are of very ancient foundation.

In 1913, 163,673 Italian and 13,385 foreign vessels (total tonnage 56,928,130) entered and 163,683 Italian and 13,370 foreign vessels (56,909,631 tons) cleared at Italian ports.

COLONIES.—The total area of Italian Colonies and possessions is 1,113,020 square miles, with an estimated population of 1,600,000, made up as follows: *Eritrea*, 60,000 square miles (pop. 280,000); *Somaliland*, 131,000 square miles (pop. 300,000); *Tientsin Concession*, 20 square miles (pop. 17,000); *Tripoli and Cyrenaica*, 922,000 square miles (pop. 1,000,000). In *Africa* Italy obtained in 1912 the territories of Tripoli and Cyrenaica by conquest and cession from the Ottoman Empire, and possesses the colony of Eritrea, and a protectorate over part of the Somali coast, extending from Cape Guardafui to the Juba river, on which they have a station; an annual rent is paid to the Sultan of Zanzibar for the Benadir ports leased by him to Italy. The Colony of Eritrea includes also the Dahlar Archipelago. The protectorate includes Aussa and the Danakil country, the Somali countries of the Sultans of Miguertini and of Obbia, as well as the Benadir, which is now a colony. By new conventions signed with the Emperor Menelek in May, 1908, Italy obtains a slight extension of frontiers, and obtains the country between Dolo and Bardera. The commencement of Italian influence was made in 1880, when the district of Assab was transferred from a trading company to the Government. The tract of land now known as Eritrea ("Red Sea") consists of a triangular portion of barren and sandy lowland between 12° and 18° N., containing in all a coast-line along the Red Sea of about 700 miles, with a total area of 60,000 square miles, and a population of about 280,000, of whom about 3,000 are Europeans. The capital is Asmara, Massowa being the chief port, where there is a good harbour, and the principal product, salt, of great value as being the monetary currency of Southern Abyssinia.

For TRIPOLI, *see* p. 765.

In *China* Italy obtained in 1902 a concession of land fronting the Peiho river, with a total area of 20 square miles and a population of about 17,000 natives.

JAPAN.

Emperor, Yoshihito, *born* 31 Aug., 1879; *succeeded* 29 July, 1912; *accession ceremony*, 10 Nov., 1915; *mar.* Princess Sadako, 10 May, 1900, and has issue 3 sons.
Heir Apparent, Prince Hirohito, *born* 29 April, 1901.
Prime Minister and Minister of Foreign Affairs (16 April, 1914), Count Okuma.

Consul at Glasgow, A. S. Younger.
,, *at Liverpool*, P. E. J. Hemelryk.
,, *at Manchester*, D. Ford Smith.
,, *at Middlesbrough*, Waynman Dixon.

This ancient and extensive Empire consists of four large and many small islands, said to comprise in all above 4,223, the principal of which are Hondō (the name of the Empire being Nippon), Shikoku, Kiū-shū, Hokkaidō or Yezo, situate to the north of the main island, from which it is separated by the Tsugaru Straits, and Formosa, called by the Japanese, Taiwan. The Ainu, an uncivilised but harmless tribe, who in ancient times occupied the greater part of the country, are still found in Yezo. The Kurile Islands have belonged to Japan since 1875, and in 1876 she incorporated the Luchu (Riu-kiu) Islands under the name of "Prefecture of Okinawa." The empire, with its dependencies, comprises an area of 235,886 square miles, with a population (1908) of 67,142,798. The islands are eminently volcanic, and 18 of the summits are still active; the chief of these, Fuji-san, or Fuji-yama, the loftiest and most sacred mountain of Japan, about sixty miles from Tokio, is 12,370 ft. high, and has been dormant since 1707. Japan is also liable to frequent, and occasionally disastrous, earthquakes. The country is very mountainous, and not more than one-sixth of its area is available for cultivation. It possesses numerous fine harbours. The soil is productive, teeming with every variety of agricultural produce. Copper, iron, sulphur, lead, antimony, and zinc abound, whilst agate, cornelian, and rock crystal are also found. Gold is found in the island of Sado, and silver mining is prosecuted on a small scale; while there is a good supply of middling coal. Petroleum is also being produced in large quantities, especially in the Province of Echigo. Among the vegetable productions may be noted the camphor-tree, paper mulberry, vegetable wax-tree, and a lacquer-tree, which furnishes the celebrated "lacquer" of Japan. The principal timber trees are the Cryptomeria japonica, Pinus Massoniana, and Zelkowa Keaki; the Paulownia imperialis is largely used for fancy boxes and works of art; the maple is merely for ornament. Chestnut, oak, beech, and elm are comparatively rare and little used. The tobacco-plant, tea-shrub, potato, rice, wheat and other cereals are all cultivated; agriculture, upon which the Japanese bestow great care, being their chief occupation. The coasts are extremely rich in fish. The floral kingdom is rich, beautiful, and varied, though scented flowers are comparatively few. Fruit, for the most part of inferior quality, is abundant; English fruits, such as apples, strawberries, pears, grapes, figs, and peaches are being produced.

Commerce and Industry.—The chief manufactures are silk and cotton, cotton yarn, matches, paper, glass, lacquer ware, porcelain

and bronze, and shipbuilding is an important industry in the yards. The chief imports are raw cotton from India, U.S., Egypt, and China; flour from the U.S.; and piece goods, metals, manures, woollens, wool, drugs, rails, locomotives, and machinery from Europe and the U.S.A. Sugar is largely imported from the Dutch East Indies and Formosa; indigo from Germany and British India; kerosene oil from U.S. and the Dutch Indies; beans, peas, and pulse from China and Korea; and rice, principally from British India, French India, Korea, Siam, and China. The chief exports are silk, cotton yarns, rice, tea, fish, copper, matches, coal, camphor, straw plaits, porcelain, earthenware, lacquer ware, and marine products.

Communications.—There were 5,985 miles of railroad open in 1914, in addition to 836 miles open in Korea, while the South Manchurian Railway (China) is under Japanese control. The mercantile marine consisted in 1913 of 1,666 steamers above 20 tons (406 of them over 1,000 tons), and 1,446 sailing vessels over 100 tons. The total tonnage entered and cleared at open ports in 1914 was 47,192,489 (19,565 vessels), of which Japanese shipping accounted for 25,646,964 tons, British 13,217,187, German 2,561,171, and French 662,169. In 1913 there were 7,268 post offices dealing with 1,677,000,000 postal packets and 24,945 miles of telegraph line carrying 33,758,301 messages.

Defence.—Service in the *Army* is universal and compulsory between the ages of 17 and 40. The peace effective is 240,000 of all ranks. The war strength is: First line, field army, about 450,000; second line, fully trained, about 300,000. The *Navy*, in 1914, included 17 battleships (1 building), 4 battle cruisers (building), 13 armoured cruisers, 23 other cruisers, 59 destroyers, 50 torpedo boats and 13 submarines (2 building).

Education is in the lower grades free and compulsory. Secondary schools are State-aided, and prepare for a 3 years' course at the Universities, which is largely devoted to the study of European languages. There are high schools for girls, and the technical and special schools are well attended. There are three State Universities, at Tokio, Kyoto, and Tohoku.

Estimated Revenue:—

	1914-15.	1914-15.
Ordinary	*Yen534,065,202	Yen524,348,820
Extraordinary	120,216,971	63,022,890

Estimated Expenditure:—

Ordinary	Yen414,682,071	Yen399,991,470
Extraordinary	145,077,527	171,697,480
Total Debt (31 March, 1913)	(£250,000,000)	
	$2,493,970,000	

	1913.	1914.
Imports	£74,462,813	£60,814,688
Exports	64,563,647	60,341,600

The imports of British produce and manufacture in 1914 were valued at £14,530,432:—

Arms & Ammunition	£269,389	Machinery	£1,246,484
Chemicals	434,940	Manures	1,085,882
Cotton	626,854	Electrical Apparatus	130,967
Cycles, Motor, etc.	91,713	Wool Tops	451,943
Iron and Steel	1,246,484	Woollens	920,312

* The local exchange value of the *yen* is about 2*s.* 0¼*d.* or $9·76 = £1 sterling.

The exports to the United Kingdom in 1914 were valued at £4,387,606:—

Copper, unwrought	£361,812	Rice, Corn & Grain	£103,908
Oil, Fish and Seed	463,554	Silk & Manuf.	1,109,454
Soya Beans	12,562	Straw plaits	440,257
Buttons & Studs	59,821		

Formosa.—The island of Formosa (Taiwan) was ceded by China to Japan (2 June, 1895) in accordance with the Treaty of Peace. Its total area is 13,500 square miles, with about 3,400,000 inhabitants (1908). Imports, £5,401,490; exports, £5,994,380 yen, in 1914. The colony has been self-supporting since 1906.

CAPITAL, Taihoku. Population, 96,500.

Saghalin (Karafuto).—The southern half of this island was ceded by Russia at the close of the war. The ceded territory has a total area of 9,824 sq. miles with a population (1910) of 25,000. The Japanese Government is encouraging the settlement of agriculturists, and there is a large fishing industry.

The *Kwantung Peninsula* (capital, Dairen, formerly Dalny), which had been leased to Russia by China, was similarly leased to Japan after the Russo-Japanese war. Area, 1,220 sq. miles; population, 522,489. Dairen provides Japan with a mainland port, ice free all the year round, and the peninsula is fertile. Imports (1914), £4,744,786; exports, £6,456,984. Revenue and expenditure (1913), 4,444,000 yen.

CAPITAL, Dairen. Population, 69,468.

The *Pescadores* (Hokoto) consists of about 14 islands, with a total area of 85 square miles, and a population of 55,000.

Korea (Cho-sen).—By a treaty of 23 Aug., 1910, Korea was annexed to Japan and became part of the Japanese Empire, and General Count Terauchi was appointed *Governor-General*.

Korea is situated between 122° and 128° E. long., and between 34° and 43° N. lat., and the coast is fringed with innumerable islands, of which the largest is Quelpart. Total length, 600 miles from north to south, and greatest breadth 135 miles from east to west, with an area of some 71,000 square miles. Population estimated at about 15,478,489 (Dec. 1913); there are about 291,217 (Dec. 1914) Japanese in the country. The soil is fertile, but mountainous except in the river valleys. About 4,500,000 acres are under cultivation, the staple agricultural products being rice and other cereals, beans, cotton, tobacco, and hemp; the other natural products are chiefly gold and hides. Ginseng, a medicinal root much affected by the Chinese, is largely grown under Government supervision in the province of Pyeng-An, and, being a Government monopoly, forms a rich source of revenue. Gold, copper, coal, iron, and other minerals are distributed throughout the country. The principal exports are beans, rice, livestock, cowhides, ginseng, wheat, barley, iron ores, and raw cotton. Manufactures are as yet in a primitive condition, the principal being hemp cloth, brass ware, and an excellent quality of paper resembling the Japanese article, but stouter. About 80 per cent. of the sea-borne trade is carried in Japanese bottoms. Considerable progress is being made in the direction of the proper lighting of the

coast. The total railway mileage open to traffic is 1,006 miles.

Revenue, 1915–16	Yen 58,523,125
Expenditure, 1914–15	58,456,118
Imports, 1914	£6,454,878
Exports, 1914	3,510,522

CAPITAL OF THE JAPANESE EMPIRE, Tôkiô, formerly called Yedo, the residence of the Emperor; population (1914), 2,033,320. Envoy Extraordinary and Minister Plenipotentiary in London, J. P. Crommelin, 13 Eaton Place, S.W.
Consul-General in London (vacant).
Consul, J. T. Grein, 27 Mincing Lane, E.C.

An independent Negro Republic of Western Africa, occupying that part of the coast of North Guinea which is between the river Cavalla, S.E., and Manna, N.W., a distance of about 350 miles, with an area of about 40,000 square miles, and extending to the interior to latitude 8° 50′, a distance of 150 miles from the seaboard. It was founded by the American Colonization Society in 1820, and has been recognised by the United States and the European powers since 1847 as an independent State. The population is estimated at 2,050,000, including about 10,000 Americo-Liberians. The principal exports are coffee, cocoa, palm-kernels, palm-oil, ivory, piassava, rubber, and camwood. The chief imports are cottons, haberdashery, salt, rice, provisions, arms and ammunition, tobacco, hardware, glass and earthenware, rum, gin, timber, and beads. The executive power is vested in a President elected for four years, assisted by a ministry; there are two houses of Legislature, the Senate, with eight members elected for six years, and the House of Representatives with fourteen members elected for four years. There is no regular army, but there is an enlisted frontier force of about 600 men under native officers. The organisation of the customs is being carried out by officers lent by the British and French Governments, with successful results. There are 15 ports of entry along the 350 miles of coast, viz.: Robertsport, Monrovia, Marshall, Grand Bassa, River Cess, Greensville, Nanna Kroo, Harper Half Cavalla, Jenne, Webo, Grand Cess, Garraway, Niffoo and Batoo. In 1913, 592 vessels (1,230,058 net tons) entered and cleared at Monrovia.

Revenue, Customs (1914)	*$335,327
Expenditure (1912)	470,000
External Debt (1914)	1,638,800
Imports (1912)	1,025,000
Exports (1912)	975,000
Imports from U.K. (1914)	£89,246
Exports to U.K. (1914)	53,450

CHIEF TOWN, Monrovia. Population, 6,000.

British Cons.-Gen. R.C.F. Maugham £950 to 1,050
Vice-Consul, Montague Y. H. Parks.

Monrovia, 3,650 miles distant; transit, by fortnightly English steamer from Liverpool, 12 days.

LIECHTENSTEIN.

Prince, Johann II., *b.* 5 Oct., 1840; *suc.* 12 Nov., 1858.

A Principality on the Upper Rhine, between the Austrian province of Vorarlberg and Switzerland; area 59·6 square miles, pop. (1909) 9,854. The main industries are agriculture (chief products being corn, wine and turf), textiles and embroidery. Revenue (1912), 860,526 *kronen*; expenditure 796,036 *kronen* (24 *kronen* = £1); no debt. CAPITAL, Vaduz. Pop. 1,376.

LUXEMBURG.

Grand Duchess, H.R.H. Marie Adelaide, *b.* 14 June, 1894; *suc.* 26 Feb., 1912.
Minister of State, M. Eyschen.

Occupied, 1914, in defiance of treaty guarantee, by Germany.

A Grand Duchy in Central Europe, bounded by Germany, Belgium, and France; it formed part of the Germanic Confederation, 1815–66, and is still included in the German "Zollverein." In 1867 the Treaty of London declared it a neutral territory under the sovereignty of the King of the Netherlands, on whose decease, 23 Nov., 1890, it passed to the Duke of Nassau. The territory was invaded and overrun by the Germans at the commencement of the war in 1914 and is still in their occupation. The area is 999 square miles; the population (1910) 259,889, nearly all Roman Catholics. The principality is rich in iron-ore. The revenue in 1912 was estimated at 18,696,137 francs, expenditure 20,629,710 francs; debt (Jan. 1, 1912) 12,000,000 francs. There are 328 miles of

* $4·82 = £1.

railway. The army numbers about 300 men. The capital, Luxemburg (population 20,848), is a dismantled fortress.

British Envoy, Hon. Sir A. Johnstone, G.C.V.O. (The Hague).
Consul, N. le Gallais.

MEXICO, Federal Republic of.

There is at present no recognised Administration, Government having been suspended in Sept. 1914.

Consul in London, Adolfo Bülle, Broad Street House, E.C.
Consul-Gen.—Liverpool, Louis G. Pardo.

A country in the southern part of the continent of North America, with an extensive seaboard to both the Atlantic and Pacific Oceans, extending from 15° to 32° 30′ N. lat. and 87° to 117° W. long., and comprising one of the richest and most varied zones in the world, but from various causes her resources have never been fairly developed. It comprises 27 states, 3 territories, and the federal district of Mexico, making in all 31 political divisions, comprehending an area of 768,883 square miles, with a population of (1910) 15,063,207. The surface consists of an elevated plateau, commencing at a few miles from the coast, and containing several volcanic summits, the highest of which, Ixtaccihuatl and Popocatepetl, rise to 17,879 and 19,784 feet above the sea. Acapulco, Manzanillo, Mazatlan, Salina Cruz, and Guaymas are the chief ports on the Pacific; and Vera Cruz, Tampico, Progreso, and Puerto Mexico on the Atlantic or Gulf of Mexico. There were 15,804 miles of railroad open on 16 Sept., 1912, and 40,687 miles of telegraph. The railroads have in a large measure been built by American and English companies. The principal crops are maize, wheat, barley, Chile-pepper, sugar, coffee, cotton, tobacco, vanilla, flax, grapes, and all kinds of tropical fruit. The maguey, or Mexican aloe, yields a favourite beverage, "pulque"; other species of the same plant supply pita-flax and sisal-hemp (henequen). The forests abound in mahogany, rosewood, ebony, and caoutchouc trees. The mineral wealth is very great; silver and gold, copper, lead, and quicksilver, iron and coal, are the leading products of the mines. Woollen and cotton spinning and weaving, and other branches of industry, are encouraged by high protective duties. The imports, nevertheless, consist very largely of textile manufactures. Of the exports 45 per cent. consist of silver and gold; sizal hemp (henequen), coffee, hides and skins, timber, logwood, vanilla, tobacco, dyestuffs, sugar, and drugs ranking next in importance.

The finances are at present in a chaotic condition owing to the prolonged civil hostilities which have occupied the various factions for the past twelve months. Affairs are, however, promising to again adjust themselves shortly. In September, 1915, the value of the *peso* had fluctuated between 3*d*. and 4*d*. in Mexico City and from 1*d*. upwards elsewhere. The extent of the public debt is unknown, and no reliable figures can be given for trade and revenue.

Imports from U.K. (1914)	£748,954
Exports to U.K. (1914)	1,849,304

CAPITAL, Mexico City. Pop. (1910), 470,659.

MONACO.

Sovereign Prince, Albert, *born* 13 Nov., 1848; *suc.* 10 Sept., 1889; *mar.*, 1869, (1) Lady Mary Douglas-Hamilton, daughter of 11th Duke of Hamilton; (2) Oct., 1889, the Duchesse de Richelieu, *born* 10 February, 1858.
Heir, Prince Louis, *born* 12 July, 1870.
Minister of State, Emile Flach.

Consul-General in London, Theodore Lumley, 37 Conduit Street, Bond Street, W.
Vice-Consul, Paul Crémieu-Javal, J.P., 39 Ennismore Gardens, W.

A miniature Principality on the Mediterranean, between France and Italy, consisting of the old town of Monaco, La Condamine, and Monte Carlo, where is the famous casino, and comprising a narrow strip of country extending from the Monaco Cemetery on the west to St. Roman on the east; it is about 3 miles long and 1½ miles broad, with (1913) 22,990 inhabitants, and a yearly average of over 1,500,000 visitors. The whole available ground is built over, so that there is no cultivation. There is a local police force of 200 men.

British Consul, J. W. Keogh (Nice).
British Vice-Consul, C. J. Sim.

MONTENEGRO.

King Nicholas, *born* 25 Sept. (8 Oct.), 1841; *suc.* his uncle, Prince Danilo, 14 Aug., 1860; *proclaimed King* 14 Aug., 1910; *m.*, 1860, Milena, daughter of Voyevod Peter Vukotich, *b.* 4 May, 1847; issue 3 sons, 6 daughters.

Heir Apparent, Danilo Alexander, *born* 29 June, 1871; *m.* 1899, Princess Jutta of Mecklenburg-Strelitz.

Premier and Minister of War, General Janko Vukotitch.

Consul-General, Col. Sir J. Roper Parkington, J.P., D.L., 21 Mincing Lane, E.C.

A Principality until 1910, in which year it was proclaimed a Kingdom by virtue of a resolution of the National Skupshtina, on the 50th anniversary of the accession of Prince Nicholas. It was formerly a province of the old Servian Empire which came to an end after the battle of Kossovo in 1389, since which date it has always claimed to be independent, and recognised to be so by the Treaty of Berlin (1878). It has an area of 5,800 square miles (including the territory acquired from Turkey in 1913) and a population estimated at 500,000. The surface forms a series of elevated ridges with lofty mountain-peaks, many of which are covered with forests. Chief products are maize, potatoes, sumac, cattle, castradina (smoked mutton), hides, and tobacco, which has been created a monopoly, and conceded for 25 years to an Italian company. The only manufactures are coarse woolens. Agriculture is the principal occupation. The ports are Antivari and Dulcigno. There is a railway from Antivari to Lake Scutari. A representative parliament was granted in 1905. In 1912 Montenegro joined with Bulgaria, Servia and Greece in a war against Turkey, the successful outcome of which resulted in an extension of Montenegrin territory at the expense of Turkey. At the present time, she has joined forces with Serbia against the Central European Powers.

	1912.	1914.

British Minister, Count de Salis, K.C.M.G., C.V.O. £1,500

Distant about 1,100 miles; transit, average 4 days.

MOROCCO (French Protectorate).

Sultan, Moulai Yusef, *acceded* 1912.

The largest of the Barbary States, situate in the N.W. of Africa, between 27°—36° N. lat. and 1°—11° 40′ W. long., with a total area of about 314,000 square miles, and an estimated population of 4 to 5 millions. In 1912 a Franco-Spanish agreement fixed the boundaries between the French and Spanish zones, and the principal part of Morocco now forms a French protectorate, while Tangier is to be internationalised. Among the chief products of the country are wheat, barley, maize, beans, peas, oil, esparto, and hemp; among fruits, the fig, almond, pomegranate, lemon, olive, orange, and date are common; but agriculture is greatly neglected. Morocco is said to be rich in mineral treasures: antimony, iron, coal, copper, lead, tin—the last three in considerable quantities. Gold and silver also are found, and wool is plentiful. There are no railways, except the narrow gauge strategic lines of the military service. All the principal towns are now connected by wire and wireless telegraph systems, and from Tangier there are submarine cables to Europe and Algeria. The trade is principally with France (and Algeria), U.K. (and Malta), Germany, and Spain.

Imports from U.K. (1914)	£1,454,923
Exports to U.K. (1914)	408,292

CAPITAL, Fez. Population, 120,000.

Consul-Gen., H. S. J. Maas, 12 Blomfield St., E.C.
Agricultural Commissioner, Dr. J. J. L. van Rijn, 50 Mount Park Road, Ealing, W.

A maritime Kingdom of Central Europe, situate on the North Sea, in lat. 50° 46′—53° 34′ N. and long. 3° 22′—7° 14′ E., consisting of 11 provinces, and containing a total area of 12,761 square miles, with a population, on 31 Dec., 1912, of 6,102,399. The majority, about three-fifths, belong to the several Reformed Churches; and the remainder are Roman Catholics, with about 107,000 Jews. The land is generally flat and low, intersected by numerous canals and connecting rivers—in fact, a network of water courses. The principal rivers are the Rhine, Maas, and Yssel, with the mouths of the Schelde. The chief native products are herrings and other fish, cattle, horses, swine, sheep, poultry, eggs, seeds, potatoes, oats, rye, wheat, barley, beans, peas, buckwheat, beetroot, chicory, flax, hemp, tobacco, and dairy produce. The principal manufactures are shipping, bricks, margarine, cocoa, chocolate, linen, rich damasks, cottons, woollens, cigars and other manufactured tobacco, candles, confectionery, earthenware and pottery, glass bottles and ware, chemical and pharmaceutical products, matches, perfumery, sugar, bicycles and automobiles, boots and shoes, starch, potato flour, engines, metal substances, works of art in gold and silver, incandescent lamps, machinery, motors, paper, printing, oils, beer, "geneva" and other liqueurs. Diamond-cutting employs numerous hands in Amsterdam.

Communications.—There are 3,190 kilometres of railroad open (31 Dec., 1911), and 7,609 kilometres of telegraph line. The mercantile marine, on the 31st Dec., 1911, consisted of 347 steamers, tonnage 1,480,943 cubic metres, and 428 sailing vessels (119,744 cubic metres), employing 10,476 men on 31 Dec., 1909.

Defence.—The Home Forces consist of a modified *militia*, purely defensive, recruited by voluntary enlistment supplemented by conscription. Military service is unpopular. The numbers on a peace footing of the army are 22,000. The first and second lines can be raised to a war strength of 200,000. The royal Navy consisted, on 1 July, 1911, of 106 vessels (9 of them ironclads, 6 protected cruisers, 13 coast and harbor defence vessels, 3 river gunboats, 2 torpedo-boat destroyers (for the colonies), 39 torpedo-boats (9 for the colonies), 3 mine-layers (1 for the colonies), 1 submarine, 20 special service vessels and 10 for special service in the colonies.

Education.—Private State-aided primary instruction is encouraged rather than public, though the latter is provided if required, by local taxation. The average attendance at primary schools is 95 per cent. Secondary schools for working classes are numerous, well equipped and attended. The principal Universities are at Amsterdam, Groningen, Leiden, Utrecht.

Trade and Commerce.—The Netherlands figure largely in the trade returns of the United Kingdom. The following are the figures for imports of British produce and manufacture in the year 1914. Total, £20,671,723:—

Apparel	£162,220	Leather	£119,717
Carriages, Motors	296,672	Machinery	701,565
Chemical products	237,793	Metals (Iron, &c.)	1,277,859

NETHERLANDS' COLONIES.

TOTAL AREA, 832,473 square miles.

POPULATION, 37,861,513.

The possessions of the Kingdom of the Netherlands in the EAST INDIES (Administrative Capital *Batavia*, pop. about 130,000) are very considerable, comprising the whole of the SUNDA ISLANDS and MOLUCCAS: *Sumatra* (area, 162,000 sq. miles), *Java* and *Madura* (51,000 sq. miles), *Netherlands Borneo* (115,000 sq. miles), *Celebes Island* (50,000 sq. miles), *Moluccas* (44,000 sq. miles), *Timor Islands* (18,000 sq. miles); with the exception of a portion of Borneo and Eastern Timor, together with WESTERN NEW GUINEA, with a total area of 738,000 square miles, and a population (1905) of 37,717,377, of whom as many as 30,098,000 live in the islands of Java and Madura. JAVA and MADURA (customs receipts, 1910, £1,675,960) produce a sufficient supply of food for a dense population, besides furnishing sugar, tobacco, tea, coffee, and other products for exportation to Europe. The "outlying" islands are frequently administered by their own princes, subject to the directions of a Netherlands Resident. There is (1913) a colonial army of 1,548 officers and 32,477 men. The colonial revenue for 1915 was estimated at 309,429,094 guilders, and was largely derived from the sale of coffee, salt, bark, and tin; whilst the estimated expenditure was 338,440,625 guilders. The exports, for private account, amounted in 1913, for Java, Madura, and the other outlying islands, to 677,734,494 florins, while the imports for the same year amounted to 464,964,620 florins.

In South America the colony of SURINAM, or Dutch Guiana (imports, 1910, £618,725; exports, £695,454), embraces 49,845 square miles and contains (1913) 96,618 inhabitants; and in the West Indies, CURAÇAO (imports, £263,525; exports, £77,115; population 32,585) and five other small islands belong to the Netherlands, having an area of 436 square miles, with a population of 21,884 (imports, £33,788; exports, £65,958).

Minister in London, Benjamin Vogt.
Offices of Legation, 25 The Boltons, S.W.
Secretary of Legation, Johann Wilhelm Michelet.
Consul-General, H. A. W. Eckell, 22 Great St. Helen's, E.C.
Vice-Consul, H. L. Bråkstad.

Norway, an independent kingdom, founded in 872 (fundamental law of 17 May, 1814), was united with Sweden under the same King from 4 Nov., 1814, to 7 June, 1905, when the union was dissolved. The Parliament of 123 members is called the "Storthing," which is divided into two sections, chosen by itself to discuss projected Bills, called "Odelsting" and "Lagting." Norway, the western and northern portion of the Scandinavian peninsula, is about 1,100 miles in length, its greatest width about 250 miles. It is divided into 20 provinces, or amts, and comprises an area of 124,130 sq. miles with a population (1910) of 2,391,782. The coast-line is extensive, deeply indented with numerous fiords, and fringed with an immense number of rocky islands. The surface is mountainous, consisting of elevated and barren table-

* In May, 1909, the Nicaraguan Government obtained a foreign loan of £1,250,000, issuing Gold Bonds with interest at 6 per cent. Of the product of the sale of these Gold Bonds, they were to pay off the English Loan of 1886 of about £245,000 and the American Loan of 1904 of £200,000. The sum of £430,000 was to be set aside for the construction of the new railroad from the Lake of Granada to Monkey Point on the Atlantic seaboard, about 120 miles. The Government of 1911 entered into negotiations for a $20,000,000 gold loan in the U.S. In June, 1912, the Government defaulted in the payment of the interest on the 6 per cent. Bonds.

lands, separated by deep and narrow valleys. The cultivated area is about one-thirtieth part of the country; forests cover nearly one-fourth; the rest consists of highland pastures or uninhabitable mountains.

Agriculture, though pursued with some vigour of late, is unable to furnish sufficient produce for home consumption; hence it has been necessary to import considerable quantities of corn, meat, and pork. The fisheries give employment to a large part of the population throughout the year. The most important are cod and herring; the exports of these with other sea-products and fish-oil were valued at 103,788,000 kroner* in 1912. The mineral products are of late increasing. Timber-dressing, mechanical engineering, textile manufactures, ship-building, and pulp-making are the principal departments of Norwegian industry. The exports of produce of the forests were valued at 85,000,000 kroner in 1912. The imports consist chiefly of the necessary articles of consumption. The chief exports consist of timber, matches, fish, oil, and other products of the fisheries, pulp, paper, skins and furs, nails, minerals, stone, ice, calcium carbide, condensed milk, butter, margarine, tinned goods, &c.

Defence.—Service in the National Militia is universal and compulsory. The war effective is about 110,000 of all ranks. In time of war all males between the ages of 15 and 55 are liable for service. The Navy consists of 4 ironclads, 2 coast defence monitors, 37 torpedo-boats, 3 gunboats, 3 destroyers, 1 submarine, and a few smaller vessels, with 1 destroyer, 1 torpedo-boat, and 3 submarines building.

Education is compulsory and free between the ages of 7 and 14, schools being maintained by local taxation with State grants in aid. The attendance is high. Secondary schools are provided by the State, by local authorities, and privately. There are 10 special schools and industrial and technical institutes. The University of Christiania was attended in 1913 by 1,500 students.

Communications.—The total length of railways open in 1914 was 1,967 miles, of which 282 miles were private lines. The length of telegraphs and telephones belonging to the State in June, 1913, was 13,535 miles. The mercantile marine, 1 Jan., 1914, consisted of 3,293 vessels, of 1,767,874 tons.

OMAN.

Sultan, or Sovereign, Seyyid Taimar bin Faisal, *born* 1886, *suc.* 1913.

Omān (area 81,000 sq. miles, estimated pop. 500,000) is a Mohammedan State in S.E. Arabia with a coast-line of about 1,500 miles along the Persian Gulf, the Gulf of Omān, and the Arabian Sea from El-Katar to Ras Sair. The country, much of which is arid and desert, attains in Jebel Akhdar an elevation of 10,000 feet. The population is chiefly Arab, but includes also a considerable foreign element—Indians, Persians, Baluchis and Swahili negroes. The Sultan is in treaty relations with, and subsidised by, the Government of India, who have a political agent at his court. The Sultan is pledged not to cede territory to any Power but the British Government. Muscat has a considerable trade, amounting in 1914–15 to £602,551. Dates, the staple food product, are the chief export, and rice, arms, wheat, coffee, cotton and silk goods the chief imports.

CAPITAL, Muscat. Population, 25,000.

British Consul and Political Agent, Lt.-Col. R. A. E. Benn, C.I.E. .....*per mensem* Rs. 2,150

PAPACY, The.

The office of the ecclesiastical head of the Roman Catholic Church is vested in the Pope of Rome, who is the sovereign pontiff of the western church, and claims temporal power over the Papal States which were incorporated with Italy from 1860 to 1870, the territory of the papacy now being confined to the palaces of the Vatican and the Lateran and the Villa of Castel-Gandolfo, which are guaranteed to the Pope (with a yearly indemnity of 3,250,000 lire) by the Italian Government.

Sovereign Pontiff, His Holiness Benedict XV. (Della Chiesa), *born* 21 Nov., 1854, *elected* Pope 4 Sept., 1914.

PARAGUAY, Republic of.

President (1912–1916), Eduardo Schaerer.
Consul-General in London, Alfred James, 18 Eldon Street, E.C.

An inland State of South America, situate between 20°—30° S. lat. and 54°—62° W. long. Its area, exclusive of the Chaco territory, claimed by both Paraguay and Bolivia, is computed at 65,000 square miles, and contains a population of about 800,000. The chief products are tobacco, yerba maté, oranges, timber, quebracho extract, hides and cassava (manioca), maize, rice, sugar-cane, ground-nuts, and other tropical and sub-tropical plants. The forests contain many varieties of timber, but only cedar and a few of the best known hardwoods find a market abroad. Stock-raising is the chief industry. The chief articles of export are hides, timber, yerba maté, tobacco, quebracho extract, cattle and meat products, oranges, and petit grain oil. The army numbers 2,000 to 3,000 men. A railway, 232 miles in length, which belongs to an English company, connects Paraguay with the Argentine railway system. The journey from Asuncion to Buenos Aires (985 miles) occupies 53 hours. Train ferries enable the run to be accomplished without break of bulk.

Consul-General, Harry Seymour Foster.
Do. for Scotland, A. C. C. Schultz.

Persia—called by the natives Irán—comprises an area of 630,000 sq. ms., with a population estimated at 10,000,000. By the Anglo-Russian Convention of Aug., 1907, Great Britain and Russia mutually engaged to respect the integrity and independence of Persia, while marking out certain regions in S.E. and N.W. Persia respectively in which each had, for geographical and economic reasons, special interests.

Persia is mostly an arid table-land, encircled, except on the east, by mountains, those in the north rising to 18,700 ft. The central and eastern portion is a vast salt desert. The only navigable river is the Karun, which was opened to foreign navigation from Mohammerah to Ahwaz in 1888. There are only 8 miles of railway open, and travelling is mostly by caravans, and transport by pack-animals. The cost of carriage is, therefore, very heavy. The chief products are cereals, cotton, gums, dried fruits, silk, tobacco, and opium. The minerals (little worked) are salt, iron, coal, copper, lead, sulphur, &c., with turquoises. Oilfields in Southern Persia have been successfully worked by an English company since 1902. The only important manufacture is that of woollen carpets (mostly a domestic industry), but shawls, silks, and cotton fabrics are also produced. There are extensive forests in the north and west. Sheep and goats

are numerous, and good wool is produced. The principal towns are Tehran (pop. 210,000), Tabriz (180,000), Ispahan (80,000), Meshed (80,000), Kerman (50,000), Yezd (60,000), and Shiraz (60,000). The Persians are mostly Shiah Muhammadans; but there are many adherents of Babiism and Armenian Christians. The laws and popular education are based on the precepts of the Koran. Persia is divided into provinces, of which the principal are under Governors or Governors-General.

Owing to increasing popular discontent with a corrupt and incompetent administration and an extravagant Court, a nationalist movement began in Dec., 1905. In Aug., 1906, the Shah, admitting the need for reforms, granted a Constitution, but after much vacillation he was deposed by the National Council, and his son, aged eleven years, appointed to succeed him. In 1911 the ex-Shah, Mohamed Ali Mirza, invaded Persia from Russian territory, but was defeated and driven out. His followers have continued the struggle.

The revenue (£2,700,000 in 1910–11) is derived from land tax, Crown lands, customs, opium, salt, and lease of monopolies. The foreign debt of Persia amounted (31 Dec., 1911) to £6,700,000. The total imports of merchandise into Persia in 1910–11 amounted to £9,700,000, and the exports to £7,520,000. Russia had about half of the imports and nearly three-fourths of the exports; the British Empire 35 per cent. of the imports and 8½ per cent. of the exports. Turkey and France were the other chief participators. The sea-borne trade of Persia passes chiefly through the ports of Bushire, Bunder Abbas, and Mohammerah, and *viâ* Baghdad. The shipping of the Persian Gulf is principally British. Persia's chief imports are cotton piece-goods (mainly from England, India, and Russia) and sugar (from Russia and France), with tea, cotton yarn, metal wares, gold and silver, petroleum, and indigo. The principal exports are dried fruits, raw cotton, pearls, opium, rice, wool, fish, hides and skins, carpets, and silk cocoons. The customs (as also the post-office) have, since 1900, been managed by European officials.

	1911–12.	1913–14.

Peru is a maritime Republic of South America, situated between 1° 31′ 29″ and 19° 13′ S. latitude and between 62° 6′ and 81° 20′ 45″ W. The territory between 17° 47′ S. and 19° 13′ S. is still occupied by Chile. The area of the Republic is estimated at 680,026 square miles, and the population at 3,530,000. It is bounded on the north by the republics of Ecuador and Colombia, as the latter claims a territory in the Amazonian basin; on the east by the Brazils and Bolivia, and on the south by Chile and Bolivia. The country is traversed throughout its length by the Andes, running parallel to the Pacific coast. The coast region is sandy desert, except where watered by transverse mountain streams, but capable of cultivation in the highest degree by irrigation. The valleys running to the coast are very fertile, and the mountains are rich in minerals, among which silver,

quicksilver, copper, and coal (of inferior quality) are conspicuous; while in the department of Tumbes, along the coast, there are important beds of petroleum. Gold is found in many districts, but especially in the province of Carabaya, where mining on an important scale is carried on. The eastern provinces are of vast extent and fertility, with a tropical climate. The medicinal productions of that region are of great value, comprising cinchona, or Peruvian bark (of which little is now exported), sarsaparilla, copaiba, &c. India-rubber is an important product of the country. Coca, cocoa, and coffee are grown on a small scale. Sugar is the staple agricultural article of the country. The Lobos and other islands on the Pacific coast provide guano. The principal imports are coal, cotton, woollen, linen, and silk goods, drugs, earthen and stone wares, machinery, explosives, metals and manufactures thereof, oils, stationery, paper manufactures, timber, and wheat. The chief exports are sugar, copper and other ores, guano, gold, silver, cotton, llama and alpaca wool, rubber, and cocaine. A small quantity of coffee is also exported.

The total length of the railways open (1912) was 1,656 miles. There is also steam navigation on Lake Titiaca and the River Desaguadero. The eastern rivers are also navigated to some extent by steam craft. Wireless telegraphy stations have been established in many places, and several are contemplated in the near future.

Defence.—The Army is recruited by voluntary enlistment, supplemented by conscription, and numbers about 5,000 of all ranks; the Navy includes two swift cruisers built at Barrow, an armored cruiser bought from the French Government, 2 submarines, and certain auxiliary cruisers.

1st Secretary, Pedro de Tovar.
2nd Secretary, Cesar de Sousa Mendes.
Commercial Attaché & Consul-General, Demetrio Cinatti.
Vice-Consul, Maj. M. C. V. Hertz, 34 Clement's Lane, Lombard Street, E.C.

Portugal lies in 37°—42° 8′ N. lat. and 6° 15′—9° 30′ W. long., being 360 miles in length from N. to S., and averaging about 100 in breadth from E. to W. Continental Portugal contains an area of 35,500 square miles, with a population in 1911 of 5,960,056, and the Portuguese Colonies a total area of 804,841 square miles, with a population estimated at 9,675,000. The Azores and Madeira form an integral part of the Kingdom. The chief products are wheat, barley, oats, maize, flax, hemp, and the vine in elevated tracts; in the lowlands, rice, olives, oranges, lemons, citrons, figs, and almonds. There are extensive forests of oak, chestnut, sea-pine, and cork, the cultivation of the vine and the olive being among the chief branches of industry; the rich red wine known to us as "port" is shipped from Oporto. Its mineral products are important—copper, lead, tin, antimony, coal, manganese, iron, slate, and bay-salt, which last, from its hardness and purity, is in demand. Its manufactures consist of gloves, silk, woollen, linen, and cotton fabrics, metal and earthenware goods, tobacco, cigars, &c. The exports consist to the extent of 50 per cent. of wine, which is the chief industrial product of the country; others are cork, cattle, copper-ore, fruits, oil, sardines, and salt. The imports are manufactured goods—hardware, cotton and woollen stuffs, machinery, wheat, sugar, dried fish, coal, &c. The commercial marine (1912) numbered 75 steam and 106 sailing vessels, with a tonnage of 108,336. In 1912, 11,134 vessels, of 23,196,767 tons, entered the ports of the Republic. Railways 1,760 miles in extent were open for traffic in 1909, and there were 6,267 miles of telegraph line in 1907. For many years the national income has been considerably less than the expenditure; this deficiency has added to the national debt.

Defence.—Service in the militia is universal and compulsory. The peace effective is about 32,000: War strength, about 150,000. The Navy consists of 1 coast-defence ship, 4 protected cruisers, some old pattern gunboats, 4 destroyers, and 1 submarine, manned by about 4,898 sailors.

Education is free and nominally compulsory between the ages of 7 and 15, but is not strictly enforced, and over 75 per cent. of the population above 7 years old are illiterate. Secondary education is conducted in State lyceums. There are also military, naval and other special schools. The University of Coimbra (1291) had 1,100 matriculated students in 1910.

	1911–1912.	1912–1913.

PORTUGUESE COLONIES.

PORTUGUESE INDIA has a total area of 1,470 square miles, with a population of 605,000, and includes Goa, Damaun, and Diu. Revenue, 1909–10, £223,000; imports, £1,316,000; exports, £220,000.

MACAO, in China, on the Canton River, has an area of 3 square miles and a population of 80,000. Revenue, 1909–10, £127,300; imports, £1,520,000; exports, £1,700,000.

PORTUGUESE TIMOR (the northern portion of the island), in the Malay Archipelago, has an area of 7,450 square miles, with a population of 300,000. Revenue, 1910–11, £40,000; imports, £80,000; exports, £64,000.

CAPE VERDE ISLANDS, off the west coast of Africa, have an area of 1,475 square miles and a population of 150,000. Revenue, 1909–10, £90,000; exports, £70,000; imports, £320,000.

PORTUGUESE GUINEA, on the west coast of Africa, has an area of 14,000 square miles and a population of 400,000. Revenue, 1909–10, £62,000; exports, £90,000; imports, 180,000.

SAO THOMÉ and PRINCIPÉ ISLANDS, in the Gulf of Guinea (area 442 square miles, population 45,000). Revenue, 1909–10, £186,500; imports, £520,000; exports, £650,000.

PORTUGUESE WEST AFRICA (Angola and Kabinda) has a total area of 480,000 square miles, with a population of 5,000,000. Revenue, 1909–10, £460,000; exports, £700,000; imports, £1,150,000.

PORTUGUESE EAST AFRICA (Delagoa Bay, Gazaland, Inhambane, Mozambique, Nyasa, Quilimane and Tete) has a total area of 300,000 square miles, with a population of 3,200,000. Revenue, 1909–10, £1,100,000; total trade (imports and exports), £6,000,000.

Trade of Colonies with U.K.

Consul-General, Lt.-Col. Sir A. K. Rollit, LL.D., 3 Mincing Lane, E.C.
Vice-Consul, N. Gulesian, Moscow Court, Moscow Road, W.

The Kingdom of Rumania contains an area of about 53,000 square miles, with a population (1899) of 5,956,690, (1913) 7,200,000. The dominating religion is that of the Greek Church. The soil is among the richest in Europe, and, but for the fearful summer droughts, would be also the most productive. The climate is extreme, for summer heats and winter colds are intense. The agricultural produce consists of wheat, maize, millet, barley, rye, beans, and peas. Vines and fruits are abundant. The forests are of great extent and importance, but the riches of the country consist mainly in its cattle and sheep. Minerals and precious metals are said to be abundant, but only salt and petroleum are obtained. The imports are chiefly the manufactured goods of Western Europe; the exports consist principally of wheat, barley, maize, petroleum (1,500,000 metric tons in 1910), rock-salt, spirits, hides, wood, and cattle. The total length of railways is 2,230 miles (1910). An extensive scheme of railway construction has been undertaken at a proposed outlay of over £17,000,000. The work will be spread over a period of seven years, and there are 3,127 telegraph offices with 9,915 miles of wire.

An International Commission, exercising sovereign powers over the navigation of the Danube, has its seat at Galatz.

Defence.—Service in the *Army* is universal and compulsory. On a war footing the Field Army numbers 250,000, and with reserves Rumania can put at the utmost limit 700,000 men under arms. There is a small navy on the Black Sea (30 vessels) and on the Danube, and 4 destroyers are building in Italy.

Education is free and nominally compulsory, but owing to inadequate provision over 60 per cent. of those above 7 years of age are illiterate. Secondary education is relatively better, and the schools are well attended. There are also special schools and Universities at Bucharest and Jassy. A Government High School of Commerce was opened in 1913.

Rumania is not a Balkan State, and took no part in the operations of the *Balkan League* (Bulgaria, Servia, Montenegro, and Greece) against the Ottoman Empire in 1912–13; but during the second war (1913), when Bulgaria was in opposition to the remaining members of the League, Rumania was able to exact terms from Bulgaria at the Treaty of Bucharest, by which a "quadrilateral" of Bulgarian territory, amounting to 7,609 square kilos, with a population of 285,000, was surrendered to Rumania. Principal towns, Silistria and Dobritzi.

	1912-13.	1913-14.
Revenue	£23,519,330	£22,357,600

Agriculture and Crown Domains, A. W. Krivosheyn.

Foreign Ambassadors.

Ambassador to France, M. Iswolsky; *Italy*, Baron de Giers; *U.S.A.*, M. Bakhmetiev.

Ambassador in London, Count Benckendorff, Chesham House, S.W.
Councillor, M. C. Nabokoff.
1st Secretary, Baron A. d'Uxkull-Gyllenband.
2nd Secretaries, M. B. de Siebert; M. G. Wolkow.
Military Attaché, General Yermoloff, K.C.B.
Naval Attaché, Capt. Walkoff, A.D.C.
Agent of Ministry of Commerce, M. Rowkowsky.
Consul-General, Baron A. de Heyking, 30 Bedford Square, London, W.C.

An Empire comprising one-sixth of the territorial surface of the globe, stretching over a large portion of its northern regions, and approaching very nearly in extent to the dominions under British rule.

	English Sq. Miles.	Population 1/14 Jan., 1912.
European Russia:		
Russia Proper	1,862,524	122,550,700
Poland	49,018	12,776,100
Finland	144,178	3,140,100
Asiatic Russia:		
Caucasia	180,703	12,288,100
Central Asia	1,325,530	10,727,000
Siberia	4,786,730	9,577,900
Dependencies:		
Khiva	26,028	800,000
Bokhara	78,524	1,500,000
Inland Lakes	317,468	...
	8,770,703	173,359,900

The largest towns in European Russia are Petrograd (2,018,596), Moscow (1,173,427), Warsaw (756,426), Riga (500,000), Odessa (449,673), Lodz (351,570), Kieff (329,000), Kharkoff (197,405), Vilna (162,633), Saratov (143,431), Kazañ (143,707), Ekaterinoslav (135,552), Rostoff (119,889), Astrakhan (121,580), Tula (109,279), and Kishineff (125,787); whilst Nijni Novgorod, Nikolaieff, Samara, and Minsk have populations between 90,000 and 95,000. In Asiatic Russia the Caucasus contains two towns with over 100,000 inhabitants, Baku (179,133) and Tiflis (160,645); Turkestan contains five large towns, Tashkend (156,000), Namangan, Samarkand, and Andijan; in Siberia Tomsk, Irkutsk, and Ekaterinburg have each about 50,000 inhabitants. Nijni Novgorod, though small, is a station on the Trans-Siberian Railway, and has annually the largest fair in the world.

Nationalities (1905).—The various nationalities were represented about as follows:—Russ, two-thirds of the whole population, or 65·5%; Poles, 6·2%; Lithuanians, 2·4%; Germans, 1·6%; Armenians, 0·9%; Jews, 3·9%; Caucasians, 0·9%; Finns, 4·5%; Turco-Tartars, 10·6%; Mongols, 0·4%; various, 2·0%.

Religions (1905).—The established religion of the empire is the Russo-Greek Church, officially called the Orthodox Catholic Faith. According to religions there were:—Orthodox, 69·9%; Mussulman, 10·83%; Roman Catholics, 8·91%; Protestants, 4·85%; Jews, 4·05%; other Christian beliefs, 0·96%; other non-Christian beliefs, 0·50%.

European Russia consists mainly of an immense plain; the Valdai hills in the west rise only to about 1,000 ft., and the Lublin hills in the south-west to about 1,500 ft. On the right bank of Lake Imandra, in the Kola peninsula, is an elevation of 3,300 ft. The Timanski range, in the province of Archangel, rises to about 3,000 ft., and Mount Lujaur-Ort in Finland to about 3,400 ft. In the Crimea and Caucasus various heights are over 4,500 ft., and the Obdorsk and Ural Mountains, which form the borderland between Europe and Asia, rise in many places to between 4,000 and 5,000 ft. In Siberia the principal ranges are the Altai, Sayansk, Baikal, Yablonoi, and Verkhoiansk mountains, with a volcanic chain in Kamtchatka. In Russian Turkestan are portions of the Thian Shan range, and in Bokhara are the Pamirs, the "Roof of the World," and in all these ranges are heights of over 5,000 ft. The principal rivers are the Volga, Ural, Dnieper, Dniester, Don, Dvina, Duna, and Neva. The Volga is the largest river in Europe, and is navigable almost to its source. In Siberia, the Ob, Yenisei, Lena, and Amur are each larger than the Volga, with many important tributaries. The river Amur, dividing Manchuria from Eastern Siberia, is navigable from its mouth to Chita, in the Trans-Baikal province, by shallow draught steamers, and is of importance, together with the Trans-Siberian Railway, in spreading Russian influence in the outlying portions of the Chinese Empire.

Agriculture.—A great portion of Russia is unfit for cultivation; in the north the *tundras* are almost constantly frozen, but in a short summer provide good pasture and certain berries fit for human food; in the south, round the head of the Caspian Sea, is an immense sandy desert steppe; whilst some of the interior provinces (to the extent of about 460,000,000 acres) and nearly the whole of Siberia are clothed with forests, in which the fir, pine, birch, oak, lime, maple, and ash predominate. The country between the Baltic and Black Sea, however, is eminently fertile, producing abundance of grain. The total area under cereals, potatoes, &c., in 1912 was 361,045,636 acres, of which 78,137,333 acres were under wheat, 72,245,482 under rye, 46,903,878 under oats, and 29,899,754 acres under barley. The harvest of cereals for 1912 is officially stated to be as follows:—wheat (spring and winter sown), 21,478,312 tons; rye (spring and winter) 25,842,956 tons; barley, 10,321,593 tons; oats, 15,569,348 tons; millet, 2,354,006 tons; maize, 2,861,106 tons. Hemp and flax are extensively cultivated, and of late years potatoes (37,399,474 tons in 1912) and tobacco (7,716,926 poods of 62 lb. in 1911).

The *Live Stock* in 1912 included 48,896,000 cattle, 74,066,000 sheep, lambs and goats, 13,508,000 pigs, and 33,169,000 horses.

Minerals.—The Obdorsk and Ural Mountains contain very great mineral riches, and, with the Altai range, are the principal seat of mining and metallic industry, producing gold, platinum, copper, iron of very superior quality, rock-salt, marble, and kaolin, or china-clay. Silver, gold, and lead are also obtained in large quantities from the mines in the Altai Mountains. Russia is now the largest producer of petroleum in the world, the output amounting to 565,300,000 poods (of 36 lb.) in 1912, and to 560,000,000 in 1913. An immense bed of coal, both steam and anthracite, and apparently inexhaustible, has been discovered in the basin of the Donetz (between the rivers Donetz and Dnieper). The coal output for the whole of Russia in 1911 was 1,739,100,000 poods (of 36 lb.), and in 1912 1,904,400,000 poods; other mineral products in 1910 were gold-ore (schlich), producing 2,916 poods of pure gold; platinum, 337 poods; pig iron (256,264,000 poods in 1912); steel and rails (1912, 274,946,000 poods), copper, 2,046,780 poods in 1912 (in 1913, 2,095,289), quicksilver (2,900 poods in 1908), salt (122,940,000 poods in 1911), and lead (75,585 poods in 1911).

Ports.—The principal ports are Petrograd the naval depôt and fortress Kronstadt, Narva, Riga, Libau, Pernau and Vindau (Baltic), Hango (Gulf of Bothnia), Revel, Helsingförs and Wiborg (Gulf of Finland), Archangel and Ekaterinsk (Arctic and White Seas), Odessa, Nicolaieff, Sevastopol, Nova-Rossiisk, Berdiansk, and Batoum, Taganrog, Mariupol, Rostoff and Kertch (Black Sea and Sea of Azov), Astrakhan, Derbent and Baku (Caspian Sea), and Nicolaieffsk, Vladivostok, and Petropaulovsk in Kamtchatka (Pacific).

Defence.—Service in the *Army* is universal and compulsory, except in the Grand Duchy of Finland and for the native races of Asia. Service lasts generally from the 21st to the 45th year. Infantry and foot artillery: 3 years in active army, 15 years in the reserve, and 5 years in the territorial army. Cavalry, mounted artillery, engineers, etc.: 4 years in active army, 13 in the reserve, and 6 in the territorials. The Cossacks serve one year in the preparatory class, 12 in active army, and 5 in the reserve. The *Navy* consists of the Baltic Fleet, the Caspian flotilla, and the Black Sea Fleet, the number of vessels being: Battleships, 9 (7 building), battle cruisers (4 building), armoured cruisers 6, protected cruisers 6 (6 building), other cruisers 4, destroyers 96 (45 building), torpedo-boats 26, submarines 29 (19 building).

Education.—With the exception of Finland, education is very backward, especially in country districts. Probably not more than 10 per cent.

of the population have received instruction of any kind. The control and maintenance of primary schools is divided between the Ministry of Public Instruction and the Holy Synod. Conditions are, however, improving. Secondary institutions comprise gymnasia and good schools, but numbers and attendances are small. Special schools are increasing in number, especially in the European cities. There are universities at Kazan, Kiev, Kharkov, Moscow, Odessa, Petrograd, Saratov, Tomsk, Yuriev and Warsaw.

Communications.—The total length of lines open for regular traffic on January 1, 1913, was 46,839 miles, inclusive of 2,347 miles in Finland, and 1,079 miles of the Eastern China Railway. New lines under construction in 1913 extended to 4,991 miles, of which 2,823 were Government lines; projected lines authorized (1 Jan., 1914) totalled 4,205 miles. In 1912 the gross revenue amounted to £113,419,600. The number of passengers carried was 235,179,382, and goods traffic amounted to 229,283,479 tons.

There were (1911), excluding Finland, 15,261 post-offices, carrying 2,044,146,319 letters, &c. Of telegraphs there were (1910) 8,423 offices, with 440,415 miles of wire, and 15 wireless stations.

The sea-going commercial marine consisted in 1913 of 716 steamers, with a total tonnage of 790,075, and 500 sailing vessels of 184,103 net tons. In 1911 the total estimated value of the steam fleet was £15,300,000 and of the sailing vessels £1,700,000. The steam fleet was manned by 17,157 persons and the sailing ships by 12,333 persons; the ocean shipping of the Russian Empire is comparatively insignificant, but the internal (lake and river) shipping is considerable.

Budget Revenue :—

	1913. *Roubles.*	1914. *Roubles.*
Ordinary	3,240,599,006	3,521,097,282
Extraordinary	10,000,000	13,400,000
Budget Expenditure :—		
Ordinary	3,012,264,284	3,302,675,714
Extraordinary	288,294,722	255,585,785

National Debt.—The National Debt amounted on 1 (14) January, 1914, to £931,600,000 (8,811,380,000 *roubles*). The total of gold in the State Bank at 1 (14) November, 1914, was 1,832,742,908 *roubles*.

Trade and Commerce.—The chief imports are cotton, tea, and other colonial produce, iron and machinery, wool, wine, fruits and vegetables; the principal exports are wheat and other cereals, raw and dressed flax, linseed, timber, hides and skins, hemp, tallow, wool, spirits, tow, and bristles.

CAPITAL OF THE RUSSIAN EMPIRE, Petrograd.† Population (1913), 2,018,596.

THE GRAND DUCHY OF FINLAND.

Grand Duke, The Emperor of Russia.
Governor-General, General Seyn.

A Grand Duchy on the gulfs of Finland and Bothnia, which was conquered by Russia from Sweden, and finally annexed in 1808. The area is 144,254 square miles, with a population of about 3,000,000 in 1907, of whom about 2,600,000 are Finns, 400,000 Swedes, 19,000 Russians, 3,000 Germans, and 2,000 Laps, leading a nomadic life in the north. Nearly all the inhabitants are Lutherans. There is a university at Helsingfors, with 2,512 students, of whom 518 are women. The leading crops are rye, barley, oats, potatoes. Saw mills and paper manufacture provide the chief industry, and the forests are a great source of wealth, immense quantities of timber being prepared for export; dairy produce is also exported. There are 2,582 miles of railroad; and a merchant fleet of 3,120 vessels (mostly small), of which 399 are steamers.

The country was formerly governed by the Imperial Finnish Senate, of 22 members, with a Diet of 4 estates elected by the people. This form of government gave way on 1 Jan., 1907, to a new Constitution involving a single Chamber elected by universal suffrage of both sexes. Women are likewise eligible for election to the Chamber. Finland is thus the first country to concede woman suffrage and representation, and it is noteworthy that it has been gained without agitation. The Finnish troops only exist in name, the Diet having voted £400,000 per annum to the Russian Treasury in lieu of furnishing Finnish recruits to the army or navy, and Finland has been made part of the Petersburg Military District. The estimated revenue in 1909 is £3,109,000, and the estimated expenditure £3,318,000; the debt amounts to £5,556,410. The imports in 1912 were £18,638,288 (of which 60 per cent. was timber), and the exports £13,392,857. The capital is Helsingfors; population, 160,000 (including Russian garrison).

BOKHARA.

Emir of Bokhara, H.H. Said Mir Alim Khan, *b.* 1880, *succeeded* 1911.

Bokhara is a vassal State of the Russian Empire in Central Asia, and has an estimated area of 85,000 square miles, with a population of 1,250,000, the majority being Muhammadan Uzbegs. The capital (Bokhara) is a station on the Trans-Caspian Railway, and has a population of about 60,000. The principal products are rice, wheat, fruit, hemp, cotton, and silk. Exports (mainly to Russia) are agricultural products and silk and cotton manufactures; imports are principally manufactured goods and sugar.

KHIVA.

Khan, H.H. Said Asfendiar, *b.* 1871, *succeeded* 1910.

Khiva lies between Bokhara and Russian Trans-Caspia, and has a total area of about 26,000 square miles, with a population of 800,000, of whom about half are nomads. The country occupies the fertile delta of the Oxus, and is highly productive. The capital (Khiva) has about 10,000 inhabitants.

† The name, St. Petersburg, was changed by Imperial Order, 1 Sept., 1914.

Petrograd, *viâ* Calais, is 1,709 miles from London; transit, 3 days.

SALVADOR, Republic of.

President (acting until 1 March, 1919), Señor Carlos Melendez.
Foreign Affairs, Señor F. Martínez Suarez.

Chargé d'Affaires and Consul-General in London, Dr. Arturo R. Avila, 7, Union Court, Old Broad Street, E.C.

Salvador extends along the Pacific coast for 170 miles, with a general breadth of 43 miles, and contains an estimated area of 7,225 square miles, with a population estimated at 1,284,000. It is divided into 14 departments, and has four ports, Acajutla, La Libertad, La Union, and El Triumfo. The principal exports are coffee, indigo, tobacco, sugar, silver, balsam (known as balsam of Peru), rice, hides, cedar, and fustic. A British railway nearly 100 miles in length connects Acajutla with the capital and Santa Ana, the coffee centre, and another line (40 miles) runs from the port of La Union to San Miguel. Earthquakes are frequent, and the capital (now rebuilt) was entirely destroyed by one in 1873; but the country has of late years suffered comparative immunity. There are 120 post-offices and 203 telegraph offices, with 2,841 miles of wire.

	1912–13.	1913–14.

SAN MARINO.

A small Republic in the hills near Rimini, on the Adriatic, founded, it is stated, by a pious mason of Dalmatia in the 4th century, and governed by a Council of 60, of whom two are elected as Regents for six months (1 April and 1 October), being thereafter ineligible for office for three years. The area is 33 square miles, the population 12,000. There is an army of about 1,000. The city of San Marino (pop. 1,500) occupies the slope of Mount Titan, and has an impregnable castle, where King Berengar of Lombardy took refuge in 950 A.D., a fine church and Government palace, and a theatre. Agriculture and viticulture flourish.

British Consul-General for San Marino, M. Carmichael (Florence).
Consul-General for San Marino in Great Britain, Commendatore Arthur Serena, J.P., F.R.G.S., 34 Leadenhall Street, E.C.

SERBIA.

King Peter I. (Kara Georgevitch), *b.* 1844, elected 15 June, 1903, *married*, 1883, the late Princess Zorka of Montenegro.
Heir Apparent, Prince Alexander, *b.* 1888.
Premier and Foreign Affairs (12 Sept., 1912), M. Nikolas Pashitch.

Finance, M.
Public Works, M. Yovan P. Yovanovitch.

Minister in London, M. Boschkovitch.
Legation, 40 Pont Street, S.W.
Secretary, Alexandre V. Georgevitch.

A Kingdom of Eastern Europe, separated from Hungary by the Danube and Save, and bounded on the east by Bulgaria, on the west by Albania and Montenegro and on the south by Greece. By the constitution of 1889 a "Skupstchina," a parliament elected by ballot, represented the people; this constitution was re-established by the present king. By the Berlin Treaty, 1878, it received a large accession of territory, and in 1912 it had an area estimated at 18,757 square miles, with a population in 1910 of 2,911,701. In 1913 Serbia, as a member of the *Balkan League* (Bulgaria, Greece, Serbia, and Montenegro), waged a successful war against Turkey. In August, 1913, Serbia and Greece were attacked by Bulgaria, their former ally, owing to disputes concerning the division of the spoils. The second war collapsed in a few weeks through the threatened intervention of Rumania, and ended in the Treaty of Bucharest. Serbia also became involved with the Austro-Hungarian Monarchy on a question of the Albanian frontier, where desultory fighting had taken place for some months, but eventually the smaller Power withdrew from the disputed area. The outcome of the military operations was the inclusion of the whole of "Old Serbia" (the greater parts of the vilayets of Macedonia) within the Serbian boundaries, which thus embrace an area (1914) of close on 34,000 square miles, with a population estimated at 5,000,000. The cost of the wars to Serbia exceeded £18,000,000. The assassination of the Austrian Heir Presumptive, in June, 1914, brought about an invasion of Serbia by the forces of Austria-Hungary, and started the pan-European war that is now in progress. The surface of the country is mountainous, containing the remains of formerly extensive forests and uncultivated heaths. Agriculture is carried on in a somewhat primitive fashion. The principal crops are maize for home consumption, and wheat for export; flax, hemp, and tobacco are also grown, and silk-culture is carried on to a limited extent. The imports consist mainly of cottons, sugar, and colonial goods, hardware, woollens, &c.; the export, of dried prunes (11·6 per cent.), pigs, and wool, besides wheat, wine, hides, cattle, and horses. The bulk of the trade is with Austria. There were (1911) 580 miles of railway, and (1908) 2,200 miles of telegraph, with 1,460 post offices and 1,100 miles of telephone.

The Army on a peace footing consists of 30,000 officers and men, the war strength being about 250,000.

Education.—Primary education is free and nominally compulsory, but the attendance does not exceed 25 per cent. of the young. The State also maintains Secondary and Girls' High Schools. The University is at Belgrade.

SIAM.

King, Somdetch Phra Paramendr Maha Vajiravudh Mongkut Klao, *born* 1 January, 1880; *succeeded* 23 October, 1910.
Foreign Minister, H.R.H. Prince Dewawongse.
Envoy Extr. and Min. Plen. in London, Phya Sudham Maitri, 23 Ashburn Place, S.W.
Consul-General, Sir John Anderson, 5 Whittington Avenue, E.C.

The Kingdom of Siam, or Muong T'ai (area about 220,000 square miles; population, 1909, 6,230,000), is a buffer State between British Burma and French Indo-China, and its integrity is guaranteed by the British and French Governments by the Anglo-French Agreement of April, 1904. The upper part of Siam is mountainous, the lower flat. Siam contains many Chinese (largely engaged in trade and industry), besides Shans, Laos, Malays, Burmese, and Cambodians, and over 1,600 Europeans. The principal religion is Buddhism, and education is mostly conducted by the Buddhist monks. Bangkok is the only much-frequented port. Over two-thirds of Siamese sea-borne trade, which centres at Bangkok, is with the British Empire, and is largely in the hands of British firms or of Chinese trading from Singapore and Hong Kong. German shipping, which has held the lead in tonnage for many years past, has ceased to visit Bangkok since August, 1914, and, as a consequence, there has been a large increase in Norwegian and British shipping. The chief products of Siam are rice and teak. The area under rice has been much enlarged by irrigation. There is a large number of rice mills, mostly in or near Bangkok. The teak industry in the great forests of N. Siam is mainly in English hands. In 1914–15 rice constituted 84 per cent. and teak 4½ per cent. of the exports; while hides and marine products are also exported in considerable quantities. Among imports are treasure, cotton goods and yarn, silk goods, provisions, gunny bags, kerosene, sugar, opium, metals and metal wares, machinery, &c. The general tariff rate is 3 per cent. *ad valorem*. Burma imports teak and cattle overland from Siam, and exports thither cotton and silk goods, &c. Except tin, wolfram, rubies and sapphires, there are no important mineral products. The King is an absolute monarch, and appoints his successor. There is

an Executive Council of Ministers and a European general adviser, and, since 1895, a Legislative Council of State, consisting of the Ministers, eight royal princes, and over twenty members appointed by the King, who has an absolute power of veto. A number of English, French, Germans, Italians, Danes, and Japanese are employed in the various State departments. Siam has an army of about 20,000 men, and a few small gunboats; compulsory military service has been introduced. About 950 miles of railroads (mostly State-owned) are now open for traffic. Railways from Bangkok run to Korat (165 miles N.E.), Ban Piu (352 miles N. of Bangkok), Petriu (4 miles E.), and Koh Lak (190 miles S.W.); while the northern line is being extended to Chiengmai, and the southern line is under construction along the whole of its length to the frontier of the Malay States. Good roads are few. There are 3,000 miles of telegraph lines.

The currency is the silver tical, worth about 1*s.* 6*d.* The Mint was closed to the free coinage of silver in Nov., 1902. In N.W. Siam the Indian rupee is more or less current. The Government issues notes.

	1910–11.	1911–12.
Total Revenue	£4,625,800	£4,793,900

Vice-Consul, Don José Prieto del Rio.

A Kingdom situate in the south-west of Europe, between 36°—43° 45′ N. lat. and 4° 25′ E.—9° 20′ W. long., bounded on the south and east by the Mediterranean, on the west by the Atlantic and Portugal, and on the north by the Bay of Biscay and France, from which it is separated by the Pyrenees; and occupying the larger portion of the great Iberian Peninsula. Its coast-line extends 1,317 miles—712 formed by the Mediterranean and 605 by the Atlantic—and it comprises a total area of 196,700 English square miles, and a population (1910) of 19,588,688. The interior of the peninsula consists of an elevated tableland, surrounded and traversed by mountain ranges —the Pyrenees, the Cantabrian Mountains, the Sierra Guadarrama, S. Morena, S. Nevada, Montes de Toledo, &c. The principal rivers are the Douro, the Tagus, the Guadiana, the Guadalquiver, the Ebro, and the Minho. The Constitution upon which the present Government is formed is dated 30 June, 1876. The principal towns are Madrid (pop., 597,573), Barcelona (587,219), Valencia (233,348), Seville (155,366), Malaga (136,192), Murcia (125,380), Saragossa (111,701), Carthagena (96,983), Bilbao (93,536), and San Sebastian (92,514); and there are also twelve towns with over 50,000 inhabitants. Spain is rich in iron, copper, and lead; its mineral resources are only partially exploited, and principally by foreign capital under foreign direction. The country is generally fertile, and well adapted to agriculture and the cultivation of heat-loving fruits—as olives, oranges, lemons, almonds, pomegranates, and dates. The agricultural products comprise wheat, barley, maize, oats, rice, with hemp and flax of the best quality. The vine is cultivated in every province; in the south-west, Jerez, the well-known sherry and tent wines are made; in the south-east, the Malaga and Alicante. The principal articles imported are raw cotton, spirits, fish, wheat and flour, sugar, coal, timber, woollen manufactures, machinery and railway materials, hides, &c. The principal exports are wine, copper and copper ores, lead, iron ores, olive oil, raisins, oranges, cork, esparto grass, wool, salt, quicksilver, grapes, &c. Trade was for many years mostly confined to France and Great Britain, but Germany has now become a serious competitor, while the United States and Belgium share an increasing proportion of Spanish trade. Home manufacture is rigidly protected by high customs duties.

In 1912 there were 9,161 miles of railway open, and 23,102 miles of telegraph line. The seagoing mercantile marine on Jan. 1, 1910, consisted of 550 steamers and 305 sailing vessels over 50 tons, of a total tonnage of 745,521. In 1910, 21,645 vessels of 21,488,654 tons entered and 18,341 vessels of 20,122,319 tons cleared at Spanish ports.

Defence.—The authorised peace establishment, including forces in North Africa, was, in 1914, 13,500 officers and 122,000 men. War strength: Field Army, first line, 230,000. Second line, 120,000.

The Navy is being rebuilt and reorganised, and consists of 3 (15,700-ton) battleships and 3 modern cruisers, with 1 old battleship and 4 old cruisers; there are also 7 torpedo-boat destroyers, 24 torpedo-boats and 10 gunboats.

Education, Primary, is nominally compulsory and mainly free and is State-aided, the public schools being maintained by local taxation. Many private schools are under clerical control, and supervision is lacking. *Secondary* High Schools are in each province, but the curriculum is defective. *Universities* at Barcelona, Granada, Madrid, Salamanca, Santiago, Saragossa, Seville, Valencia, and Valladolid.

The BALEARIC ISLES are an archipelago of 15 islands in the Mediterranean, the largest being Majorca, Minorca, Iviza, and Formentara; the total area is 1,935 square miles, with a population (1910) of 325,703. The archipelago forms a province of Spain, the capital being Palma in Majorca.

CEUTA, which forms part of the Province of Cadiz, is a fortified post on the Moroccan coast, opposite Gibraltar. The total area is 5 miles, with a population of about 13,000.

The CANARY ISLANDS are an archipelago in the Atlantic, off the African coast, consisting of 7 islands and 6 uninhabited islets. The total area is 2,807 square miles, with a population of 419,809. The Canary Islands form a Province of Spain, the capital being Santa Cruz in the island of Teneriffe.

SPANISH COLONIES.

The Spanish Colonies (exclusive of Ceuta and the Canary Islands, which form an integral part of the kingdom) consist of certain settlements and islands of Western Africa, with a total area of close on 82,400 square miles, and a population exceeding 275,000.

Fernando Po.

FERNANDO PO (*Fenando Póo*) lies in the Bight of Biafra in 3° 12′ N. lat. and 8° 48′ E. long., about 20 miles distant from the west coast of Africa, and is a mountainous island (Pico de Santa Isabel, 10,800 feet), with forests of oil palm, ebony, mahogany, and oak, and sugar cane,

cotton, and indigo. Cocoa, coffee, sugar, tobacco, vanilla, and kola nut are cultivated, and large quantities of cocoa and other products are exported. The capital is Basile, and the largest town Port Clarence (1,500 inhabitants). Dependencies of the island of Fernando Po are :—

Annobon Island (*Anno Bom*), in the Gulf of Guinea, in 1° 24′ S. lat. and 5° 35′ E. long. The roadstead at the capital (San Antonio de Baia) is much frequented by passing vessels, which also obtain water and vegetables from the islanders.

Corisco Islands, consisting of Corisco, Bana, Elobey Grando, and Elobey Chico, lie in Corisco Bay, and export ebony, logwood, and other forest produce.

Rio de Oro and Rio Muni.

RIO DE ORO is a possession on the north-west coast of Africa, between Cape Bogador and Cape Blanco, or approximately between 21° 20′–26° N. lat., and extending eastwards to about 13° W. long. The territory is part of the waterless Sahara, with a sparse population of wandering Muhammadan Arabs. There are valuable fisheries off the coast, and cattle, sheep, and camels are bred where vegetation permits.

Rio Muni (or *Spanish Guinea*) is a coastal settlement of West Africa between German Cameroon and French Congo (1° N.—2° 10′ N. lat.), extending about 125 miles inland. The inhabitants are Bantu tribes, and the principal settlements are at the mouths of the Muni, Benito, and Campa rivers, and at Bata on the coast. Cocoa, coffee, and bananas are cultivated, and rubber, palm oil, palm kernels, and other forest produce are exported.

Spanish Morocco.

On the Moroccan seaboard are certain Spanish *presidios*, formerly used as convict settlements.

Melilla is a town on a rocky promontory of the Riff coast, connected with the mainland by a narrow isthmus. The population is about 9,000, and the settlement exports goatskins, eggs, and beeswax, and imports cotton goods and provisions.

Alhucemas is a settlement on the bay of that name, and includes six islands.

Peñon de la Gomera (or *Peñon de Velez*) is a fortified, rocky islet about 40 miles west of Alhucemas Bay.

The Chaffarinas (or Zaffarines) are a group of three islands near the Algerian frontier, about 2 miles north of Cape del Agua ; population about 1,000.

Ifni, on the Atlantic coast of Morocco, about 100 miles south of Agadir, affords access to the interior of south-west Morocco, but has no great trade at present.

Vice-Consul, C. W. Espersson.
Swedish Church, Harcourt Street, Marylebone Road, W.

Sweden comprises the eastern half of the Scandinavian peninsula, and comprises the capital and 24 governments, "Län," with an area of 172,876 square miles, and a population, 31 Dec., 1910, of 5,521,943, nearly all Protestant. This area includes the great lakes of Hjälmaren, Mälaren, Vänern, and Vättern. Nearly 49 per cent. of the population are devoted to agriculture, about 298,000 being owners and 50,000 tenants of the land they cultivate. The country for the most part is flat, with pleasant undulations, rising in the north-west to the Kölen Mountains, which separate Sweden from Norway ; and may be divided into three separate districts—the northern, forest ; central, mining ; the southern, agricultural. The climate in the south is favourable for producing grain. The principal articles of cultivation are the various cereals—oats, rye, barley, wheat—and potatoes. The forests are very extensive, covering one-half of the surface of the country, and consisting of pine, birch, fir ; these are of great importance, supplying timber, pitch, and tar, and also the chief fuel. The mineral products are extremely rich : iron of excellent quality, that known as the Dannemora iron being converted into the finest steel ; gold and silver in small proportions ; copper, lead, nickel, zinc, cobalt, alum, sulphur, porphyry, and marble. There is a railroad opening up the rich iron-ore districts of Lapland, and mineral trains run from Gellivare and Kiruna to Lulea on the Gulf of Bothnia and to Narvik on the Atlantic. Considerable mines of coal are being worked in Scania. The chief imports are coffee, wine, tobacco, and other ordinary colonial produce, coal, cloth, yarn, wool, cotton, skins, manure, iron, fish, oils, wheat, rye, pork, and machinery. The chief articles of export are timber, butter, iron, steel, wood pulp, paper, matches, stone, iron and zinc ores, &c.

Commercial travellers in Sweden are compelled to take out a licence, costing 100 crowns a month, or they incur the risk of being fined.

Railroads 8,594 miles in length (of which 2,746 are the property of the State) were open at the end of 1913 ; and 20,009 miles of telegraph wires (exclusive of 17,199 railroad telegraph wires), 177 stations, and 1,729 railroad and 940 other telegraph stations (1912). There were at the same date 245,750 miles of telephone wires.

Defence,—Service in the *Army* is universal and compulsory. The peace effective is about 80,000 trained men. The first line can be raised to war strength of about 110,000; second line, 85,000. The *Navy* consists of 92 fighting vessels (438 guns), 23 being ironclads, with submarines, submersibles, and some training ships, &c.

Education.—Primary: Compulsory and free. Illiteracy rare. Maintained by local taxation, with State grants. Attendance good. (ii.) *Secondary:* Well-developed, schools numerous and efficient. (iii.) *Special schools* make a feature of technics and navigation. (iv.) *Universities:* Lund, Upsala, and a few private faculties.

The Helvetia of the Romans, a Federal Republic of Central Europe, situated between 45° 50′—47° 48′ N. lat. and 5° 58′—10° 30′ E. long. It is composed of 22 Cantons, of very dissimilar size, united under a Constitution dated 29 May, 1874, and comprises a total area of 15,950 square miles, with a population of 3,877,210 in 1913, who are divided between Roman Catholics, 40 per cent., and Protestants, 59 per cent., Jews numbering 7,400 and others 11,000. The population is formed by three nationalities, distinct by their language, as German 71 per cent., French 21 per cent., Italian 6 per cent., and Romanshe (in the Grisons), 1½ per cent. The most important cities are Zurich, pop. (1915) 203,265, Bale 137,155, Geneva 138,688, Berne 85,650, and Lausanne 66,125. It is the most mountainous country in Europe, having the Alps, covered with perennial snow and glaciers, rising from 5,000 to 15,213 feet in height, not only along its southern and eastern frontiers, but throughout the chief part of its interior; and the Jura mountains in the north-west. Agriculture is followed chiefly in the valleys, where wheat, oats, maize, barley, flax, hemp, and tobacco are produced, and nearly all English fruits and vegetables are grown. The forests cover about one-sixth of the whole surface. The manufactures consist chiefly of silks, cottons, linen, lace, thread, woollens, &c.; clocks and watches have long been the staple products of Geneva and Neufchâtel, while leather, gloves, pottery, tobacco and snuff, cheese, &c., are made. Being an inland country, the direct trade with the United Kingdom is comparatively small. In

* The President is elected in December, and remains in office from 1 Jan.—31 Dec.; he is *generally* succeeded by the Vice-President.

1914 there were 3,530 miles of railway in working order, 17,333 miles of telegraph line, 317,403 miles of telephone line, and 2,099 post offices.

The legislative power is vested in a Parliament, consisting of two Chambers, a National Council of 189 members, and a Council of States of 44 members; both Chambers united are called the Federal Assembly, and the members of the National Council are elected for three years, an election taking place in October. The executive power is in the hands of a Federal Council of 7 members, elected by the Federal Assembly, presided over by the President of the Confederation. The President has a salary of 20,000 francs; the Vice-President and other members of the Federal Council 18,000 francs each. The members of the Federal Council are elected for three years; each year the Federal Assembly elects from this council the President and the Vice-President; they are elected for one year, the five other members for three years. Not more than one of the same canton may be elected member of the Federal Council.

Defence: Militia. Active Army, 12 yrs.; initial trg., 65–90 days. Subsequently 11 days per ann.; *then* Landwehr, 8 yrs.; 1 trg., 11 dys. for dismtd. branches only; *then* [Landsturm to age 48]. *War Strength*, 140,600; Landwehr, 65,000; Landsturm, 57,000.

Education.—Control by cantonal and communal authorities. No central organ. Illiteracy rare in Protestant cantons. (i.) *Primary:* Free and nominally compulsory, but attendance is not strictly enforced in the essentially Roman Catholic cantons. School age varies. (ii.) *Secondary:* Age 12–15 for boys. Schools numerous and well-attended, and there are many private institutions. (iii.) *Special schools* make a feature of commercial and technical instruction. (iv.) *Universities:* Bâle, Berne, Fribourg, Geneva, Lausanne, Zurich, and Neuchâtel.

TRIPOLI (Italian Colony).

This Vilayet of the Ottoman Empire, on the northern coast of Africa, was occupied by Italy in 1911–12, and under the Treaty of Ouchy (Oct., 1912) the sovereignty of the province was transferred to the King of Italy, the spiritual headship over the Muhammadan population being retained by the Sultan. Tripoli is the most easterly of the Barbary States, extending from the frontiers of Tunis to those of Egypt, a distance along the coast-line of nearly 1,100 miles, and inland to the south a distance of about 800 miles. The transferred territory comprises the four sub-provinces or Mutessarifiks of Tripoli, Khoms, Jabel-el-Gharb, and Fezzan, and also of Benghazi or Cyrenaica, a total area of 410,000 square miles, with a population of over 1,000,000. There are no rivers in the country, and, the rainfall being precarious, a good harvest can only be reckoned on every four or five years. Barley, dates, olives, oranges, lemons, and vegetables are produced, and the principal imports are metals, British and other European manufactures, tea, beads, wine and spirits, besides a number of articles for barter in Wadai, Bornu, and the Western Sudan, whither caravans proceed from Tripoli. The principal articles of exports are ostrich feathers, ivory, skins, sponges, hides, esparto grass, cattle, and horses. The ancient ruins in Cyrenaica, *i.e.*, at Cyrene, Ptolemais, and Apollonia, are interesting to explorers, as well as those at Leptis Magna, which is close to Khoms, or 70 miles from the city of Tripoli; agricultural colonies of Cretan Moslem refugees are being formed in the neighbourhood of Cyrene and Apollonia (Marsa Susa). The town of Benghazi has a population of about 21,000, consisting of Arabs, Greeks, Maltese, and a few Levantines. The commerce in cereals, wool, cattle for Malta, and other agricultural produce, is considerable, when a sufficient rainfall causes good harvests.

CAPITAL, Tripoli. Population, about 40,000.
Consul-Gen., J. Bowring Spence £800
Vice-Consul, W. L. C. Knight .....£350 to 450

	Area (sq. miles).	Estimated Population.
Turkey in Europe	12,000	2,755,000
Turkey in Asia :—		
Anatolia	193,800	9,175,000
Armenia and Kurdistan	72,600	2,500,000
Mesopotamia and Syria	244,460	4,650,000
Turkish Arabia	172,000	1,100,000
Turkey in Africa :—		
Egypt	363,181	11,400,000
Total	1,058,041	31,580,000

Of the above totals only 700,000 square miles (with a population of 21,000,000) are directly under Turkish government.

Until the disastrous war of 1912–3 with the States of the *Balkan League* (Bulgaria, Greece, Servia, and Montenegro) the European dominions of Turkey extended westwards to the Adriatic and northwards to Bosnia-Herzegovina (Austria). Under the Treaty of London (30 May, 1913) the north-west portion of Turkey was a line drawn from Enos, in the Ægean, to Midia, in the Black Sea, thus excluding Adrianople, which had capitulated to the Bulgarians after a prolonged siege. During the second Balkan War (Bulgaria against the other members of the Balkan States) Turkey took advantage of the military difficulties of Bulgaria and reoccupied Adrianople, thus recovering a considerable portion of the vilayet of that name. In 1911–12 Turkey lost the remaining portion of her African possessions through the occupation by Italy of Tripoli and Cyrenaica, which were ceded under the Treaty of Ouchy (1912). Turkey joined forces with the Austro-Germans in November, 1914, and has attacked Russia and invaded Egyptian territory. Her doom as a European Power is now, in every probability, sealed.

EUROPEAN TURKEY consists of the Vilayets, or Provinces, of Adrianople and Constantinople, with the Mutessarifat of Chatalja, and is separated from Asia by the Bosporus at Constantinople and by the Dardanelles (Hellespont) —about 40 miles in length, with a width varying from 1 to 4 miles—the only political neighbour being Bulgaria, on the north-west. The principal towns of European Turkey are Constantinople, the capital, with a population of about 1,200,000, and Adrianople (100,000).

TURKEY IN ASIA comprises Anatolia, Armenia and Kurdistan, Mesopotamia and Syria, and Turkish Arabia :—

Anatolia, which is practically identical with Asia Minor, consists of the Vilayets of Adana, Angora, Archipelago, Broussa, Castamuni, Konia, Sivas, Smyrna, and Trebizond, with the Mutessarifats of Bigha (Dardanelles) and Ismid. Of the total population (9,175,000) about 5,000,000 belong to the Orthodox Greek Church, over 4,000,000 are Muhammadans, and the remainder principally Jews. The Archipelago Vilayet of Anatolia formerly comprised a number of islands with a total area of close on 3,000 square miles, and other islands were under Turkish suzerainty. In 1911–12 Italy occupied Rhodes, with the neighboring islands, and is to remain in possession until the Ottoman forces are removed from Tripoli; while in 1912–13 almost all the remaining islands of the vilayet, and Crete and Samos, were obtained by Greece. *Cyprus* (*see* p. 641) has been administered by Great Britain since 1878, and was formally annexed to the British Empire in 1914.

Armenia comprises the vilayets of Bitlis, Erzeroum, and Mamuret el Aziz, and *Kurdistan* those of Diarbekir and Van. Of the population (2,500,000) about 650,000 are Armenian Christians (the massacres of 1915 have, however, resulted in their practical extermination), 250,000 other Christians, and 1,600,000 Muhammadans. *Mesopotamia* (the land of the Tigris and Euphrates) includes the vilayets of Bagdad, Basra, and Mosul, and part of the vilayet of Zor. South of the city of Bagdad is Kerbela, the sacred centre of the Shiite Muhammadans.

Syria includes the vilayets of Aleppo, Beyrout, and Syria, and part of the vilayet of Zor, with the Mutessarifliks of Jerusalem and Lebanon. The Biblical district of *Palestine* now forms the Mutessarifliks of Jerusalem (El Kuds), Lebanon, Acre, and Nablus. The total area of this cradle of Christianity is about 11,000 square miles, its present population being about 700,000, of whom 150,000 are Jews, and the remaining principally Muhammadans.

The principal towns of Asiatic Turkey are Smyrna (260,000), Bagdad (150,000), Damascus (150,000), Aleppo (125,000), Beyrout (120,000), Scutari in Anatolia (80,000), and Broussa (80,000).

Defence.—Active Army, 3 or 4 yrs.; Active Reserve, 6 or 5 yrs.; 1 trg. of 6 wks.; *then*, Redif (*Landwehr*), 9 yrs.; 2 trgs., each 1 mo.; *then* Mustafiz (*Landsturm*), 2 yrs.; no trg. *Peace Establishment* (before war of 1912), abt. 220,000; *War Strength* (1913–14), *European and Anatolian Ordus*, abt. 180,000. *First Line*, 120,000. *Second Line: Hedjaz and Yemen*, 20,000. (In field in Thrace, Macedonia, and Albania, Dec., 1912, abt. 350,000 *First and Second Line* troops). Abt. £8,000,000 (1912). In 1910 the Navy consisted of 3 battleships (2 bought from Germany), 2 protected cruisers, 3 torpedo gunboats, 8 t.b.d. (4 bought from Germany), and about 14 torpedo-boats, manned by a total peace force of about 15,000 men. A 23,000-ton battleship building in England for the Turkish Fleet, at the outbreak of war, was acquired by Great Britain. Besides this, there is the Makhsussa Fleet of about 75 steamers of various sorts, worked by the Government and available as transports, storeships, and coast guard cruisers.

Communications.—In 1912 there were 4,230 miles of railway open, 1,230 miles in European and 3,000 miles in Asiatic Turkey. Of this total 1,000 miles (Hejaz line) are owned and worked by the Ottoman Government and 3,230 by foreign concessionaires (French 1,080, German 1,030, Austro-German 800, British 320). In 1912 there were 912 post offices, and 29,500 miles of telegraph line. Telephones have been installed in certain towns since the revolution of 1908–9. The sea-going mercantile marine of Turkey consisted in 1913 of 135 steam vessels (62,215 tons) and 137 sailing vessels (45,450 tons). In 1913 vessels of 17,397,888 tons entered Constantinople.

A Republic in South America, on the east coast of the Rio de la Plata, situate in lat. 30° –35° S. and long. 53° 25′–57° 42′ W., containing an area of 72,210 square miles, and a population of 1,094,688, of whom about 2,000 are British born. The Republic consists mainly of undulating grassy plains, there being no heights above 2,000 ft. The principal river is the Uruguay and its affluents, of which the Rio Negro is the chief. Wheat, barley, and maize are cultivated, but the wealth of the country is obtained from its pasturage, which supports large herds of horned cattle (9,000,000 in 1908) and sheep (26,000,000 in 1908), the wool of which is of excellent quality. Gold mines exist at Cuñapirú. The exports are almost entirely animal and agricultural products, and include wool, hides, horn, hair, tallow and jerked beef, and wheat and maize; the imports are principally machinery, textiles and clothing, food substances and beverages, coal, and bloodstock. The imports from the U.K. are numerous, the principal being woollen and cotton goods, hardware, and coals. There are 1,570 miles of railway open (1913), all in British hands, and 4,850 miles of telegraph in 1913, with 19,039 miles of telephones. There were 995 post-offices, dealing with 117,660,838 letters and packets.

The most northerly Confederation of South America, situated approximately between 1°40′ S. lat. and 12° 26′ N. lat. and 59° 52′–73° 15′ W. long. It consists of 20 States and 2 federal territories. The best authorities calculate the actual present area to be approximately 363,728 square miles. The census of 1891 gave the population as 2,323,527; it was estimated to be 2,796,448 at 31 July, 1914. The principal imports are cotton prints and cotton drill, mainly from the U.K. The principal articles of export are coffee (£2,957,613 in 1913–14); cacao (£903,136 in 1913–14); balata gum, goatskins, asphalte, and hides. The U.S. is the principal customer.

Geographical Progress and Territorial Changes, 1914–15.

In spite of the war, geographical work of some value has been done during the past year, not only on the part of neutrals, but also to some extent of belligerent countries. The following are some of the items most worthy of being placed on record. Territorial changes cannot, of course, be spoken of except in the few cases where they concern neutrals only.

Asia.—Once more the principal achievements in Asia must be credited to Sir Aurel Stein, who has added much to his previous record. During the summer of 1914 he and the Indian surveyors with him were busy in the Chinese province of Kansu, the Gobi Desert, and the Nanshan range, and new light was thrown on the ancient Chinese border defences and lines of communication in this region. While returning to Turkestan they continued their surveys in the Tien Shan range and Dzungaria, and, after taking up winter quarters in the Turfan oasis, in various directions from that centre also. The survey parties carried their triangulation through the Kuruk Tag or "Dry Mountains" to the Kuen Lun range in the south, afterwards linking it with the Tien Shan in the north, which was thus connected with the Indian triangulation system. All eventually made their way back by various routes to Kashgar, whence Sir Aurel started in July, 1915, with permission from the Russian authorities, for further work in the Pamirs and the mountainous tract north of the Oxus. He proposed to spend the winter in Seistan on the eastern borders of Persia.

The Italian expedition under Cavaliere de Filippi completed its extensive programme of scientific work in the Karakoram Himalayas before the end of 1914, the survey parties executing a survey of the whole upper basin of the Yarkand River, whence the expedition proceeded *vid* Yarkand to Kashgar and eventually to Tashkent, making gravity and other physical observations at each place, and so linking up the Russian and Indian systems. The leader visited England early in June, and gave a graphic account of the work of the expedition before the Royal Geographical Society.

A French expedition to Western China under the Comte de Voisins, Dr. Segalen, and Capt. Lartigue, was able to carry out some archæological and survey work on the borders of Sechuen and Yunnan before being stopped by the war.

Africa.—Dr. Cuthbert Christy, who for three years had been engaged in zoological collecting on behalf of the Belgian Congo Museum in the great forests of the north-eastern part of the Congo basin, reached Khartum on the completion of his work early in 1915. During journeys in many parts of the forest region, and also in the more open country to the north, he had made large collections of the fauna, including specimens of some of the rarest species. With the aid of the pygmy dwellers in the forest he achieved the rare feat of obtaining two specimens of the elusive okapi.

America.—Information on several important pieces of exploration and survey work in Canada has come to hand since our last summary. During expeditions extending over three successive seasons, Mr. R. J. Flaherty explored the eastern parts of Hudson Bay, and was eventually rewarded by the discovery of a chain of islands running parallel with the eastern coast of the bay, of which he had previously obtained some intelligence. The discovery was made during the last expedition (1913–14), for which a schooner was specially purchased and refitted. The winter was spent on the south coast of Baffin Land, and the search for the islands began in 1914. Their position corresponds in part with that of the small Belcher Islands of the Admiralty chart, and it seems probable that they were the islands sighted and mapped by Hudson in his fatal voyage of 1610, but not visited since. Their area is estimated at 4,000 square miles. Hydrographic work was also carried out in the bay in 1914 by a Government party under Mr. Anderson in the specially constructed survey vessel *Acadia*.

In the Canadian Rocky Mountains important work has been done in the hitherto almost unknown area north of Mount Robson, where a fine snowy peak had been for some time reported to exist. An American zoologist, Mr. S. P. Fay, carried his explorations very near this mountain (which he has tentatively named Mount Alexander) in 1912 and 1914, and in the latter year its lower slopes were ascended by a lady mountaineer, Miss M. L. Jobe, who has returned to the attack in 1915. Further north, surveys were carried out in 1913 and 1914 on behalf of the Canadian Survey Department, both east and west of the main range, by parties under Messrs. Swannell and Milligan, who explored a considerable area bordering on the Peace River and its tributary, the Finlay.

The important work of the United States Geological Survey in Alaska continues to be prosecuted with energy, no fewer than twelve parties being sent out in 1915 for the study of the topography, geology, and economic resources of various parts of the territory.

From South America it is reported that the Brazilian, Colonel Rondon, with whom Mr. Roosevelt made his journey down the "River of Doubt" (now known officially as the Rio Theodoro), has completed his task of linking the south-eastern provinces of Brazil by telegraph and road with the Madeira and Amazon across Matto Grosso. Further explorations of the rivers of this region have been undertaken under his orders by Lieut. Marques de Souza. Prof. Hiram Bingham has returned from his fifth expedition to Peru for geographical and archæological research.

The long-debated question of the boundary between Costa Rica and Colombia was finally settled in 1914 by the award of the arbitrator, Chief Justice White of the United States, after a thorough survey of the ground had been made by a mixed commission. The chief modification as compared with the award of President Loubet in 1900 is said to be the choice of the southern instead of the northern watershed of the Rio Sixola. Among the South American boundaries still unsettled is that between Bolivia and Paraguay, all negotiations with a view to an understanding on the subject having so far had no definite result, though in 1913 a protocol was signed affirming the necessity of a treaty of delimitation between the two countries.

Australasia.—The Fly River in New Guinea was ascended in 1914 almost to its source by a party headed by Sir Rupert Clark, Sir William Macgregor's turning-point having been passed, however, by a short distance only. Mount Donaldson, 2,200 feet high, was ascended. In

the Dutch part of the island exploration of the Great Mamberamo River and its branches has been continued, an expedition under Capt. Oppermann examining the main headstream from the east (known to the Dutch as Idenburg River), while another under Lieut. Stroeve explored a western branch (named the Rouffaer), and pushed on across a difficult country to the coast of Geelvink Bay. Lieut. Stroeve was unfortunately killed in an encounter with natives.

The name "Southern Ocean," recommended by the British Admiralty as the designation for the vast expanse of water lying between the Antarctic Continent and the southern parts of South America, Africa, Australia, and New Zealand, has been formally adopted by the Governments of the Australian Commonwealth, New Zealand, and the Union of South Africa.

The United States magnetic research vessel *Carnegie* has started on a new voyage in the waters of the Southern Hemisphere, to occupy two or three years.

Polar Regions.—The Canadian and American Arctic expeditions of Mr. Stefánsson and Prof. Macmillan have both achieved results of interest in the area north of America, if not quite to the extent that had been hoped. At the end of 1914 grave anxiety was felt for the safety of Mr. Stefánsson, who, with two companions, had gone north over the ice of the Beaufort Sea early in the year, and had not since been heard of. Only in September, 1915, was the anxiety allayed by his safe return. In 1914 he had made an adventurous journey, much hindered by "leads," thin ice, and contrary currents, but had finally struck the west coast of Banks Island, and after joining his supporting party in the *Mary Sachs* had established himself there for the winter. In 1915 he went north up the west coast of Banks Island and Prince Patrick Island, and discovered an extensive mountainous land to the north of the latter, tracing its coast for over 100 miles. The return was made by Melville Island and diagonally across Banks Island. After a short visit to the Canadian coast late in August he went north again, and has already begun a new journey of exploration to the north and north-west.

The first news for a year of Prof. Macmillan came about the end of 1914, to the effect that, leaving the winter quarters at Etah in February, and reaching the final starting-point at Cape Thomas Hubbard (Axel Heiberg Island) in March, the leader and Ensign F. Green had pushed north-west over the ice, with considerable difficulty and danger owing to thin ice, for 125 miles. Although for a time appearances of land were seen, on arrival at the position of Peary's supposed Crocker Land, they proved to have been fallacious, no trace of land being then visible. Cape Thomas Hubbard was reached once more, only just before the break-up of the ice, about the middle of May. The summer was spent in various researches, and it was planned to explore Grant Land and the islands further west in the spring of 1915.

North of the Old World, the most important achievement is the completion of the north-east passage—for the first time in an east to west direction—by the Russian ice-breakers under Capt. Vilkitski, who in his previous attempt had been stopped by ice near the northernmost point of Asia, but had been rewarded by the discovery of new land running north from that neighbourhood. During the new venture winter quarters were established in 1914 in about 100°E. (a new island having been discovered on the way), and the voyage completed in the summer of 1915. Unfortunately no success has attended the search for the lost Russian explorers, Russanof and Brussilof, Captain Sverdrup, who undertook the search on behalf of the Russian Government, having returned in 1915, after wintering in about 92° E., without having met with a trace of the missing parties.

In the Antarctic, the chief events needing mention are the final start southward of Sir E. Shackleton by way of the Weddell Sea, and of the auxiliary expedition from Hobart to the Ross Sea under Lieut. McIntosh. In his last message, sent from S. Georgia in January, 1915, Sir Ernest reported that his plans had been affected by the unfavourable state of the ice, and that there was little prospect of starting on the sledge expedition across the Antarctic Continent for another year. All the members of Sir Douglas Mawson's arduous expedition to the Antarctic Continent south of Australasia received from the King the well-deserved honour of the Polar Medal in February, 1915.

A tragic event, indirectly connected with this expedition, was the loss with all hands of the Australian Fisheries Investigation steamer *Endeavour* (Capt. G. W. C. Pim), which left Melbourne in November, 1914, to take relief to the meteorological observers left at Macquarie Island by Sir Douglas Mawson. The vessel started on her return voyage on December 3, having on board Mr. Dannivig, Director of Fisheries to the Commonwealth Government, and his staff, but was not afterwards heard of.

General.—A useful contribution to geography has been the compilation at the Royal Geographical Society, on behalf of the War Office, of a map of Europe and adjacent parts of Asia and Africa on the millionth scale. Many of the sheets are already on sale to the public.

EDWARD HEAWOOD.

The Visible Horizon.

The limit of vision at any given point varies with the height at which the spectator is placed. The greatest distance at which an object at sea-level (or on the surface of a plain) can be seen by a person whose eyes are at a height of 5 feet from the same level is 2¼ miles, and at 10 feet the distance is increased to 4 miles; at 20 feet to 5¼ miles. The radius of vision does not increase in the same proportion as the height, the increase between the visibility at 5 feet and 6 feet being half a mile, but between 19 and 20 feet only one-sixth of a mile. The following table shows the *approximate* range of vision at different heights:—

At a height of	5	feet	the radius is about	2¼	miles
,,	,,	10	,,	,,	,,	4	,,
,,	,,	20	,,	,,	,,	5½	,,
,,	,,	50	,,	,,	,,	8½	,,
,,	,,	100	,,	,,	,,	12¼	,,
,,	,,	500	,,	,,	,,	27½	,,
,,	,,	1000	,,	,,	,,	38¾	,,
,,		2000	,,	,,	,,	54¾	,,
,,	,,	3000	,,	,,	,,	67	,,
,,	,,	4000	,,	,,	,,	77½	,,
,,	,,	5000	,,	,,	,,	86½	,,
,,	,,	5280	feet (1 mile)		,,	89	,,

Objects which are themselves raised above the level are visible at proportionately increased distances, according to the height at which they stand.

Meteorological Summary (British Isles), 1914–1915.

THE results in the table below are for London (Westminster and South Kensington)—barometer above Mean Sea Level, 70 feet.

The Year's Weather (British Isles), 1914–1915.

1 NOVEMBER, 1914, TO 31 OCTOBER, 1915.

(1914) *November* was wet and rather rough. The most stormy period was from the 10th–16th. The highest gust-velocity was 81 miles per hour at Quilty on the 13th. From the 17th–24th it was cold but quiet. Temperature was above the average in most parts, and readings of 60° or above were recorded at many stations. The highest of the maxima was 63° at Killarney and at Guernsey. There was a cold spell about the middle of the month, when minima below 20° were recorded, the lowest being 12° at Braemar on the 18th. In the English Channel the lowest reading was 33°. Rainfall was, on the whole, in excess, in Scotland north and east by as much as 50 per cent. Falls of upwards of an inch in 24 hours were not very numerous, but on the 29th some very large amounts were recorded—3·17 in. at Princetown and 4·13 in. at Pen-y-gwryd. At Salisbury the total for the month was 7·4 in., and at Ambleside 16 in. Heavy snow was experienced about the 15th. Bright sunshine was above the average generally. The sunniest station was Worthing, with a daily average of 3½ hours. At Fort Augustus the daily average was less than ¾ hour. Aurora was observed at Aberdeen on the 11th.

December was windy and very wet. At Falmouth there were gales on 17 days. The highest gust-velocities recorded were 92 miles per hour at Quilty and 90 miles at Falmouth, both on the 4th. Temperature was above the average until the 18th, but between the 21st–25th there was severe frost, with minima down to 13° in Shropshire and to 7° at Braemar. On the 23rd–24th the temperature in many places remained below the freezing point all day. For the whole month the temperature over England was above normal, but in Scotland and Ireland it was below it. Rainfall was in excess in all districts, and at many stations the amounts collected constituted a record. Thus at Kew the amount, 6·37 in., was the highest for 59 years, and at Greenwich 5·96 in. was the highest December total for 100 years. Along the south coast of England the amounts were more than three times, and at Hawarden Bridge more than four times the average. Snow fell at times, but as a rule quickly disappeared. Towards the end of the month the Thames valley was extensively flooded. Sunshine was slightly in excess generally, but in England east and south-east there was a deficiency. Aurora was seen at Newton Rigg on the 26th. Thick fog was experienced in many places on the 24th.

(1915) *January* was windy and wet. The highest gust-velocity was 83 miles per hour at Falmouth on the 1st. On the 15th there was a gust of 78 miles at Quilty. Temperature for the first fortnight was mild, but later on it became cold, and for the week ended the 30th it was 7° colder than during that ended the 16th. The lowest reading was 13° at Braemar on the 10th, and at Matfield, Kent, on the 23rd. Rainfall was in excess generally, but in parts of Scotland and Ireland there was a deficiency. At Waterford the amount collected was less than half the average, while at various places in England, chiefly in the north and east, it was more than double the usual amount. The heaviest fall in 24 hours was 2·8 in. at Pen-y-gwryd on the 10th. The floods in the Thames valley were the highest since 1894. Sunshine was in defect in the eastern districts, but was more than usual in the extreme north and in the west. The sunniest station was Seskin, Carrick-on-Suir, with a daily average of nearly 3 hours. Aurora was seen at Gordon Castle on the 13th. Fog was occasionally reported, but was at no time very widespread.

February was very wet and stormy. At Falmouth high winds or gales were reported on 22 days. The strongest winds were on the 13th, when gusts of 78 miles per hour were experienced at Falmouth and Scilly. The mean temperature differed little from the normal. Severe frosts were rare, and at four stations the temperature did not fall to freezing point. The highest readings were 58° at Glasnevin and 56° at Inverness and other places, on the 3rd. The lowest reading was 11° at Kingussie and Wolfelee on the 24th. On the 25th Marlborough reported 15°. At no station in the United Kingdom was the daily maximum below 32°. Rainfall was again greatly above the average, and large areas

in southern England became flooded. Over England and Wales as a whole the rainfall was nearly twice as much as usual. At Dartmoor the total fall for the month was 16·9 in., the amount on the 16th being 3·9 in. There was not much snow. Sunshine was in excess except in the north-east and east of Great Britain. Worthing reported a daily average of over 3¾ hours, and Jersey nearly 4 hours. Fog was not very prevalent. Aurora was seen in Scotland on the 8th and 22nd.

March was quiet, cool, and dry. Gusts of wind of 67 miles per hour were recorded at Southport on the 1st and at Dover on the 19th, but gales were neither frequent nor widespread. Temperature, though below the average, on the whole was slightly in excess in the eastern districts. Maxima of 60° and upwards were reported from nearly all parts. The highest of the maxima were 65° in Scotland E. on the 14th, and at Matlock on the 24th. Severe frosts were experienced at times, and on the 20th at Balmoral the minimum was 11°, and at Wellington on the 28th 14°. Rainfall was less than the average in all districts, the defect being greatest in Ireland S., where it was only one-third of the usual amount. At Foynes, co. Limerick, the amount collected, 0·5 in., was less than one-sixth of the average. Bright sunshine was, on the whole, less than normal, and varied from 2·7 hours per day in Scotland N. to 4·2 hours per day in Scotland W. England S.E., usually one of the sunniest districts, had 3·2 hours per day. Perth was the sunniest station, with a daily average of 4·8 hours. Aurora was seen on the 7th and 8th. Fog was not very common.

April was dry, especially in the south. The winds as a rule were not high, but on the 8th–9th there was a westerly gale with gust-velocities up to 69 miles per hour. Temperature on the whole was slightly in excess of the normal. On the 13th the maximum at many stations did not exceed 45°, but from the 16th onwards readings of 60° were frequently observed, and during the last week maxima of 70° or upwards were recorded in nearly all districts. The highest reading was 74° at Woking on the 30th. In Guernsey, however, the highest reading was only 62°. The lowest of the minima was 21° at Leadhills (co. Lanark) on the 8th. Rainfall was in defect except in Scotland N. and W., and England N.W. At many stations in England the total for the month was less than half the average, and at some only one-third. Sunshine on the whole was not far from normal. The sunniest station was Dover, with a daily average of 6·8 hours. In the Shetlands the daily average was only 2·8 hours. Fog was rather common in the south and west at first, and a brownish haze was noted at Southport all through the month. Aurora was seen in Scotland on four days.

May was very dry in places, and with much easterly wind. Gales were rare; the strongest gust registered was 65 miles per hour at Falmouth on the 3rd. Temperature was below normal in most districts, but in the south it was a little warmer than usual. The highest readings were 82° at Camden Square, London, on the 26th, and 80° at Gordon Castle and Fort William on the 24th. Frost was experienced in all districts except the English Channel. The lowest reading reported was 20° at Braemar on the 14th. Over England the minimum was 22° at Garforth on the 3rd. Rainfall was much below the normal in Scotland and Ireland, but over England as a whole it was in excess, owing mainly to heavy falls on the 12th–13th and 17th. Snow was observed at Kentchurch, Hereford, on the 13th. The number of wet days was, however, small generally. At Southend the total fall was twice the average, but the rainy days were only five. The heaviest daily fall was 2·2 in. at Matfield. Sunshine was abundant except on the S.W. coasts. The sunniest stations were Castlebay, Hebrides, with a daily average of 9¾ hours, and Blackpool, 8½ hours. Much fog was observed, especially in the west and south-west.

June was very dry, with much easterly wind. There were no strong gales, the maximum gust-velocity being 49 miles per hour at Scilly on the 14th. Temperature was not far from the normal. Some very high maxima were, however, recorded between the 4th and 10th, when many stations reported readings of 85° and upwards, the highest being 90° at Cromer and Norwich on the 8th. During the latter part of the month the temperature was, as a rule, low for the time of year. The minima fell below freezing point in most districts, the lowest readings beings 28° at Garforth and 27° at Braemar on the 18th. Rainfall was greatly in defect in all parts. Some heavy falls were recorded, mostly in the west and north, but at only a few places was the total for the month as much as usual. The drought which began in the latter part of May continued, and at some stations there was no rain for periods up to 39 days. At Dover the total for the month was less than one-seventh the average. At many places the month was the driest June since 1889. Sunshine varied a good deal, but on the whole was in excess. In Scotland N. the duration was nearly 2 hours a day above normal, but in the English Channel it was 2¾ hours less. The sunniest stations were Blackpool and Leamington, with a daily average of 8½ hours. Fog was common in the west and south-west. Thunderstorms were general during the last week.

July was cool, with frequent thunderstorms. The highest wind-velocity was 60 miles per hour in gusts at Shoeburyness and Falmouth on the 7th. A widespread gale occurred on the 16th–17th, with excessive rain, but the maximum wind-force did not exceed 58 miles per hour. Temperature was below the normal. The highest reading was 87° at Greenwich on the 4th, but over a large part of the country the temperature did not touch 80°, and about the middle of the month there were several days when it did not reach 65°. The lowest minimum was 34°. In the English Channel the lowest reading was 50°. Rainfall was above normal in all districts, and several stations in the Midland Counties had more than twice as much as usual. Sunshine was less than normal except in Scotland W. and the English Channel. The sunniest station was Guernsey, with a daily average of 9 hours. Fog was general on the coast on the 2nd, 3rd and 22nd.

August was rainy at first, then cool and dry. There was little strong wind, and the highest velocity reported was 47 miles per hour at Dover on the 2nd. Temperature on the whole was slightly above normal. In England S.E. and the English Channel it was a little below. The highest reading was 79° at Raunds (Northants) on the 10th, and the lowest was 30° at Braemar and West Linton on the 21st. Rainfall for the month was below the average, except in England E., where it was slightly in excess. The deficiency varied from 0·08 in. in England N.W. to 2·28 in.

in Scotland W. At many stations the total was less than half the average. Some heavy falls were, however, reported, amongst them being 1·76 in. in one hour at Biggar (Peebleshire) on the 2nd, and 1·48 in. in 40 minutes at Warlingham (Surrey) on the 17th. Sunshine on the whole was below the average, but at many southern stations it was in excess. At Deerness (Orkney) the daily defect was nearly 2½ hours. The sunniest station was Guernsey, with a daily average of 8¼ hours. Fog was reported on several occasions during the first half of the month. Thunderstorms were unusually numerous. Aurora was seen in Stornoway on the 8th.

September was sunny and mild and, in most places, very dry. There was but little strong wind, and the maximum gust-velocity reported was only 51 miles per hour at Dover on the 29th. Temperature was above the average in all districts except England S.E. The highest reading, 80°, was recorded on the 17th at Camden Square, Tottenham, and Raunds. The week September 12th–18th was, in England and Ireland, warmer than any week in the previous July. There were cold spells, however, and readings of 32° or less were recorded in nearly all parts of the country, the lowest being 24° at Kilmarnock on the 29th and at Wellington on the 30th. Rainfall was less than the average over the country generally, but in the north-east of Scotland it was greatly in excess. In Scotland W. the total fall was only one-third of the average, and at some places in Lancashire it was less than one-sixth of the normal. On the Moray Firth, on the other hand, the rainfall was the greatest for many years, and very serious floods were caused. Sunshine was in excess in all parts, the percentage varying from 32 in Scotland N. to 55 in the English Channel. Fog was rather frequent on the western coasts from the 7th–24th. Aurora was seen on the 30th.

October was at first very cold and dry; the middle weeks were warm and very dry, but towards the close of the month it became cold and wet. There were no widespread gales, and the highest gust-velocity was 63 miles per hour at Aberdeen on the 28th. Temperature varied greatly, but the mean for the month was, in most districts, not far from the normal. The highest reading was 68°, which was observed in London and other places on the 12th, while the lowest reading was 21° at West Linton on the 30th. In Guernsey the lowest reading was 41°. Rainfall was in defect in all districts except England S.W. and Ireland S. There were heavy falls about the 7th and after the 20th, but the middle of the month was very dry in most places. The largest daily fall was 3·4 in. at Crathes on the 28th. At Glencarron the total for the month was less than one-fourth of the normal. Sunshine was in defect in all districts except Scotland N. and E. In Scotland N. the average daily duration was 3½ hours, while in the Midlands it was only 1½ hours. Fortrose was the sunniest station, with a daily average of 4·4 hours, while at Bolton (Lancs) the average was only 0·7 hour. Aurora was seen on the 14th, 15th, and 24th. Much fog was reported on the 29th and 30th, especially over the eastern half of the country.

THE YEAR'S WEATHER AND THE CROPS.

1 Nov., 1914, to 31 Oct., 1915.

(1914) *November* opened with good weather for field work, but later heavy rains came on, and then a spell of frost, which hindered farm work a good deal, especially in the northern districts. Good progress was, however, made on the whole, and by the end of the month about four-fifths of the area intended for wheat had been sown. This area showed an increase of 10 per cent. as compared with 1913. At the close of November the early sown wheat was strong and healthy and generally well forward; oats and beans, where above ground, were looking well; mangolds had practically all been lifted in good condition, and with a yield which, though still below the average, was better than in 1913. Little winter barley had, however, been sown. Roots generally were better in the western districts than on the eastern side.

The *Autumn* was warm, especially in the northern districts of England. Rainfall was considerably below the average, the defect being particularly marked in Scotland and Ireland. Sunshine, though not far from the normal on the whole, was above the average in the south-eastern and north-western districts of England, and slightly below the average in Ireland.

December was marked by heavy and continuous rains. As a result, field work was hindered, very little wheat could be sown, and the general position showed but little advance. At the end of December the crops as a rule looked well except on the heaviest lands, but late-sown wheat was not so flourishing as the early sown. Winter oats and beans were quite satisfactory. Seeds varied a good deal. In the eastern districts the fields were in many cases patchy, and some had to be ploughed up. On the western side the position was much better. Turnips and swedes were turning out fairly well, but the roots were small as a rule, and there were complaints of mildew. The wet weather was much against the flocks, but the ewes stood the trying conditions well, and lambing was fairly satisfactory. In Bedfordshire, however, the loss of both ewes and lambs was reported to be much above the average.

(1915) *January* opened with heavy rains, which stopped the work on the land, but operations were resumed in most parts during the drier weather of the last week. At the end of the month the winter-sown crops on the drier lands were looking well, but late-sown crops and crops on wet lands often appeared weak. The wet weather proved trying to the ewes, yet on the whole the lambing prospects were not far from the normal. Live stock generally had suffered from the rain, but in spite of this the cattle were, as a rule, healthy, and the outlook was satisfactory. The supply of keep was sufficient except in the eastern and south-eastern districts.

February was very wet and stormy, and in most parts of the country very little work could be done in the fields during the month. At the end of the month, however, in spite of the wet, the wheat on light soils, and where sown in good time, was looking well and healthy. Later sown wheat and that on heavy and low-lying ground had suffered, and in places was turning yellow. The spring sowing had scarcely begun. Oats and beans were looking well in all parts. Lambing was in full swing in the southern counties, but the condition of both ewes and lambs was not very satisfactory. In other districts the condition of the ewes was fairly good, and prospects were normal. Live stock had not made much progress.

The *Winter* was of average temperature over the country as a whole, but was rather warm in

the east and south-east of England, and cool in the south of Ireland. Rainfall was excessive generally, especially so in England, Ireland, and the English Channel. Sunshine was slightly below the normal, the defect being most marked in England East.

March was a dry, quiet month, and in consequence farmers in most parts of the country were able to make progress with work on the land. Towards the end of the month, however, there was cold weather, and sharp frosts again checked operations. Spring sowing was, as usual, more forward in the southern counties than further north, but in this respect the season was backward generally. Potato-planting was got on with in Lincoln and Norfolk, but as a rule little could be done in this respect. The fall of lambs was about the average, but the ewes were in poor condition, and in the northern districts there was considerable mortality both amongst ewes and lambs. At the end of the month some improvement in the health of the lambs was noted. The early sown wheat was looking well, as were also beans and oats. The later sown wheat was still in an unsatisfactory condition.

April, though unsettled at first, was dry for the most part, and farmers, therefore, were able to make good progress with their work on the land. The sowing of spring corn was got on with except on heavy lands, which proved too dry to work. Potato-planting got well advanced; the young plants made good progress, and by the end of the month the condition of farm work was about normal for the time of year. Seeds, however, were backward, and—like the pastures—were much in need of rain. Lambing on the whole had proved rather below the average, and live stock, while healthy, was rather backward in condition owing to the want of green food. Fruit trees were in good blossom, especially stone fruits, and the orchards appeared to have escaped serious injury from night frosts.

May was dry and cool, and in consequence, while outdoor work was got on with, the young plants did not make much progress. The area under barley was estimated at 6 per cent. less than in 1914, and that under oats at about 5 per cent. more. At the end of the month wheat generally was vigorous and healthy, though on some heavy lands it was rather discoloured. Barley and oats were backward, but peas and beans were looking well. Early potatoes were affected by frosts in some districts, but were mostly healthy. Nearly all the mangolds had been got in, but turnip-sowing was backward owing to the dry weather. Hops, though backward, promised well on the whole, and the fruit prospects were good. The pastures were in want of rain, but stock on the whole was doing well.

The *Spring* was of average temperature over all parts of the country. Rainfall was less than the normal generally, the defect being most marked in Ireland and in parts of Scotland. Sunshine was slightly above the average as a rule but in England N.W. it was decidedly in excess, while in the English Channel it was as decidedly deficient.

June was very dry till nearly the end of the month, when rains were general throughout the country. All the crops except wheat suffered from the drought, especially roots and pastures. Early potatoes suffered from frosts in the first part of the month, but the main crop escaped harm. In the north of England barley was a better crop than oats, but elsewhere there was not much difference. The hay harvest made good progress in the south, but the yield was 20 per cent. below average. Live stock did only fairly well. Hops were backward owing to the drought and to cold nights. Fruit blossom was abundant, but much fell prematurely. Expressing an average crop by 100, the prospect at the end of June is denoted as follows:—Wheat, 98; barley, 90; oats, 90; beans, 98; peas, 95; potatoes, 95; mangolds, 96; seeds hay, 89; meadow hay, 79; and hops, 86.

July was wet and cool, but the heavy rainfall was on the whole beneficial to the crops generally. Corn, roots, and pastures were all improved; on the other hand, a good deal of corn was laid by the storms, and meadow hay sustained damage. Potatoes, turnips, and swedes improved much during the month. The seeds hay was a light crop and was secured in good condition in most places, but the hay harvest as a whole was much protracted. Prospects for hops greatly deteriorated during June; cold nights hindered growth, and aphis were more troublesome than for thirty years past. Small fruits were about the average. By the end of the month pastures had improved, keep was plentiful in nearly all parts, and live stock was doing well.

August was unsettled at first, with frequent thunderstorms, but the latter half of the month was fine, and allowed of excellent progress in the harvest. At the end of the month the cutting of corn was general in all districts, but not much had been carried. The straw of both barley and oats was short. Beans suffered from blight during the month, and peas also deteriorated somewhat. Turnips and swedes were variable, but as a whole below normal. Hops improved during the month, especially in well-managed gardens where washing was continuous. All classes of stock did well, and by the end of the month the pastures were full of grass. The apple crop was a little below average, while pears were a little above, and plums much above normal. Expressing an average crop by 100, the condition at the end of August indicated probable yields as follows:—Wheat, 100; barley, 92; oats, 93; beans, 94; peas, 94; potatoes, 99; turnips and swedes, 92; mangolds, 98; and hops, 67.

The *Summer* temperature differed but little from the average except in the southern parts of England, where it was slightly cooler than usual. Rainfall over the whole country was a little below the normal, and sunshine was also somewhat deficient as compared with previous years.

September was very fine, and the cereal crops were all secured in good condition, though in hilly districts some corn was left outstanding. The fine weather arrested the progress of disease amongst the potatoes, but the roots were kept back by want of rain. Autumn cultivation was hindered in some parts by hard ground, and in other places by the late harvest; and by the end of the month very little wheat had been sown. The young seeds were, however, healthy, and though pastures were rather bare there was generally plenty of keep. Live stock did well.

October was favourable for work on the land, and the corn crops were, on the whole, secured in good condition. Wheat proved of good quality generally, and was the better crop. By the end of the month the bulk of the potatoes had been lifted, while the lifting of the mangolds was well advanced. Turnips and

swedes were still growing, and though small they were promising to be a sound crop. Seeds were looking well. In some parts a fair proportion of wheat had been sown, but in other places little had been done in this direction owing to the hardness of the ground. Live stock had done well, and there was still a fair amount of grass.

Storms and Floods in 1914–1915.

(1914) *December* 12. Land-slide on Panama Canal after heavy rains, stopping navigation. 18-24. Flood in Arizona, river 7 ft. above normal level. 28. Heavy gale on S.E. coast of England; much damage at Folkestone, Broadstairs, and other places; serious floods in Huntingdonshire and in the Thames valley.

(1915) *January* 1. Floods in Thames valley increasing, river risen 2 ft. in one week. 5. Flood at Salisbury; Cathedral flooded, for the first time in 60 years. 5 6. Very heavy rains at Pitoes, Brazil; 11 in. fell in 3 hours, and 5 in. on following day, causing serious land-slides, breaking water mains, and doing much damage. Wolf Rock Lighthouse relief delayed for five weeks owing to rough weather.

June 27. Storm in Midlands and South Wales, floods 7 ft. deep in places; much damage at Bristol. 30. Severe thunderstorms in Yorkshire, several deaths from lightning.

July 24. Thunderstorms with heavy rain and hail in London, Kent, and Essex; much damage done. Electric tramcar set on fire by lightning at Bedworth, Warwickshire. 27. Rainstorm in London, sewerman drowned in Kennington through sudden rush of water. 29. Snow fell at Kimberley, South Africa, to the great astonishment of natives.

August 3. Cloud-burst at Erie, Pennsylvania, 100 miles North of Pittsburg, followed by breaking of dams and inundation; water up to second story of houses, wreckage piled 15 ft. high; 2,000 persons rendered homeless, many deaths. Soldier killed by lightning at Ashford, Kent, while engaged in bayonet practice. Man killed by lightning at Chislehurst. 7. Heavy thunderstorms and rains; many parts of South London flooded, two sewermen drowned at Manchester, great damage to crops in Lincolnshire. 17. Terrific storm in Galveston, many lives lost and much damage done to property; Army transport ship *McClellan* left high and dry half a mile inland. Cyclone in Haiti, many lives lost.

September 24. Very severe floods in North-East Scotland; near Nairn the floods were the worst for 80 years.

October 1. Hurricane on Mississippi and Louisiana coasts; over 250 deaths, enormous damage.

DEATHS FROM STARVATION.—In 1912, in England and Wales, these numbered 94, of which 40 occurred in London, and 44 in the Provinces. In 15 cases death was due to starvation alone or in combination with disease, exposure, or neglect, accelerated by want. Seven were in receipt of Old Age Pensions. Three had been in receipt of outdoor relief previously. Two refused poor relief, and two refused until too late. In 92 cases no application had been made for relief, or it was only sought for in a dying condition. No cases were in receipt of poor-law relief at time of death. In 3 cases indoor relief had been offered but not accepted.

Regulations respecting Passports.

1. APPLICATIONS for Foreign Office Passports must be made in the form printed on the back of the Regulations (to be had on application), and inclosed in a cover addressed to "The Passport Department, Foreign Office, London, S.W." They must reach the Foreign Office before 4 p.m. on the day prior to that on which the Passport is to be issued.

2. The charge for a Passport is 5*s*. Passports are issued at the Foreign Office, between the hours of 10 and 4 *on the day following that on which the application for the Passport has been received*, except on Sundays and Public Holidays, when the Passport Office is closed. If the applicant does not reside in London, the Passport may be sent by post, and a Postal Order for 5*s*. should in that case accompany the application. *Postage stamps will not be received in payment.*

3. Foreign Office Passports are granted (1) to natural-born British subjects, *viz.*, persons born within His Majesty's dominions, and to persons born abroad who derive British nationality from a father or paternal grandfather born within His Majesty's dominions, and who, under the provisions of the Acts 4 George II., cap. 21, and 13 George III., cap. 21, are to be adjudged and taken to be natural-born British subjects; (2) to the wives and widows of such persons; and (3) to persons naturalised in the United Kingdom, in the British Colonies, or in India.

A married woman is deemed to be a subject of the State of which her husband is for the time being a subject.

4. Passports are granted (1) in the case of natural-born British subjects and persons naturalised in the United Kingdom, upon the production of a Declaration by the applicant in the form printed at the back of these Regulations, verified by a Declaration made by a member or official of any *Banking Firm* established in the United Kingdom, or by any *Mayor, Magistrate, Justice of the Peace, Minister of Religion, Barrister-at-law, Physician, Surgeon, Solicitor, or Notary*, resident in the United Kingdom; the applicant's Certificate of Birth and other evidence may also be required in certain cases; (2) in the case of children under the age of 16 years requiring a separate Passport, upon production of a Declaration made by the child's parent or guardian in a Form (B), to be obtained upon application to the Foreign Office; (3) in the case of persons naturalised in any of the British self-governing Colonies, upon production of a letter of recommendation from the High Commissioner or Agent-General in London of the State concerned; and in the case of natives of British India, and persons naturalised therein, upon production of a letter of recommendation from the India Office. Persons naturalised or ordinarily resident in any of the Crown Colonies must obtain a letter of recommendation from the Colonial Office.

5. If the applicant for a Passport be a Naturalised British Subject, his certificate of naturalisation must be forwarded to the Foreign Office with the Declaration or letter of recommendation. Naturalised British subjects, if resident in London or in the suburbs, must apply *personally* for their Passports at the Foreign Office; if resident in the country, the Passport will be sent, and the Certificate of Naturalisation returned, to the person who may have verified the declaration, for delivery to the applicant. Naturalised British subjects will be described as such in their Passports, which will be issued subject to the necessary qualifications.

6. Foreign Office Passports are not available beyond two years from the date of issue. They may be renewed for four further periods of two years each, after which fresh Passports must be obtained. The fee for each renewal is 2*s*.

7. A Passport cannot be issued by the Foreign Office, or by an Agent at an outport, on behalf of a person already abroad; such person should apply for one to the nearest British Mission or Consulate. Passports must not be sent out of the United Kingdom by post.

8. Travellers who intend to visit France, the Russian Empire, the Kingdom of Rumania, Persia, Colombia, Hayti, Italy, Tripoli, Eritrea, or Serbia, in the course of their travels, must not leave the United Kingdom without having had their Passports *visés* either at the French Consulate-General, 18 Bedford Square, W.C., the Russian Consulate-General, 30 Bedford Square, W.C.; the Rumanian Consulate-General, 3 Mincing Lane, E.C.; the Persian Consulate-General, 82 Victoria Street, S.W.; the Colombian Consulate-General, Sicilian Avenue, Southampton Row, W.C.; the Haytian Consulate, 32 Fenchurch Street, E.C.; the Italian Consulate-General (for Tripoli and Eritrea), 44 Finsbury Square, E.C., or the Serbian Legation, 195 Queen's Gate, S.W., respectively, or at one of the other Consulates of those States in the United Kingdom. Travellers about to proceed to any other country need not obtain the *visa* of the Diplomatic or Consular Agents of such country.

ILLEGITIMACY.—A man may be summoned to petty sessions on the application of the mother of a bastard child, or by the Guardians of the Poor where the child becomes chargeable to the Union or Parish; and the Justices, on his being proved to be the father of the child, may make an order requiring him to pay for its maintenance and education a sum not exceeding 5*s*. a week. The mother has the custody of her bastard children. No person is required as father of an illegitimate child to give information concerning the birth of such child, and the registrar is forbidden to enter in the register the name of any person as father of the child unless at the joint request of the mother and father. Such person is in that case required to sign the register, together with the mother. A domestic servant found to be *enceinte* may be peremptorily dismissed without notice; but any attempt to examine without her consent a servant supposed to be *enceinte* renders the employer liable to an action.

The Great War.

THE LAND OPERATIONS.

THE war, which few people doubted, in view of its intensity at the outset, would terminate within a twelvemonth, still drags on, and has indeed recently taken a new lease of life in the Balkans. Four nations are now leagued together as the Quadruple *Alliance*, while England, France, Russia and Italy are known as the Quadruple *Entente*—the latter being aided by Japan, Belgium, Serbia and Montenegro. The western line of battle has been prolonged, and now extends from the North Sea to the Adriatic, excluding Switzerland. The eastern line has been thrown back from the Vistula in Poland to the Dwina, the Styr, and the Sereth in West Russia and East Galicia. A new theatre of war is defined by the railway route from Belgrade to the Bosporus, which passes through Serbia in its northern section; and the aim of the Austro-German forces is to dispossess the Serbians of this section and so link up Constantinople with Vienna and Berlin by railway. On the peninsula of Gallipoli an Anglo-British force has endeavoured to seize the forts which command the straits of the Dardanelles and so reopen communication by water with the Black Sea. Another theatre of operations is found in the region of the Caucasus, where Turks and Russians contend in Armenia. Further east an expedition from India is making its way up the Valley of the Euphrates, opposed by the Bagdad corps of Turks. Operations also take place in the vicinity of Aden. East Africa, Rhodesia, and the Cameroons are also scenes of a species of guerilla war. South-West Africa has, however, been wrested from Germany by Union troops led by General Botha.

The operations of war take place, too, on three planes—that is, on the surface of land and sea, in the air and under water. Every variety of climate and season, every species of terrain have been experienced by the troops engaged; great rivers have been crossed; the strongest fortresses have been attacked; glaciers in the Alps and rocky heights in Gallipoli have been scaled; armed steamers have fought on African lakes; and naval guns have contributed to the efforts of soldiers operating on the sea coast. The losses in killed, wounded, and prisoners have been on a scale commensurate with the enormous armies employed. It is officially stated that 25,000 British troops are in captivity, 150,829 have been killed in action or have died of wounds, and 317,465 have passed through the hospitals up to October 9 last. The Prussians have admitted a loss of over 2,000,000 men; the other belligerent Governments have not disclosed their lists of casualties. The French theatre of operations is deemed the decisive one. That is to say, success in this quarter would probably herald the termination of the war, whereas victory in other theatres would only tend to embitter and prolong the struggle in France, which remains the centre of disturbance. Fighting goes on continuously of a character similar to that employed in siege warfare. Yet there is no fortress and no siege, since no single objective can be selected on a front some 500 miles in length, the assault of which would involve the whole of the defending army, as in the case of a fortress. Neither can the garrisons of field fortifications be starved into surrender by investment, since the rear is open to both armies, and supplies and munitions of war pour in without intermission. The belligerents are only engaged at the outworks, and the citadel or base is in each case out of reach. Such a situation is quite without precedent, and it is caused primarily by the number of troops being sufficient to hold the line though insufficient for a general assault throughout its length. There can be little doubt that the armies of 1914 have been placed *hors de combat* long ago, but gaps in the original units have been filled up by fresh drafts, and new formations have been created out of material which makes up in determination what may be lacking in skill. These renovated and improvised divisions of all arms have called to their aid all the resources of mechanical science. High explosive in all its forms is hurled by guns of prodigious size and power, or by catapults, or thrown by hand; the bayonet and the dagger have been used in underground encounters in the dark, sappers and miners ply their dangerous trade as in the sieges of the 18th century, advances have been obstructed with miles of barbed wire, and the use of sharpshooters has been revived under the name of snipers. Aircraft has become part of the apparatus of artillery for observing the results of its fire, and in several theatres it has supplanted cavalry for reconnaissance work and raiding expeditions. The cavalry, finding its occupation gone, has accordingly learned to fight as infantry. The work of the military engineer has increased to such an extent that in our new armies battalions of pioneers have been formed to relieve the sappers of such work as road making and draining, excavating and water supply. The machine-gun, which was regarded as the weapon of opportunity—a pair being attached to each infantry battalion and cavalry regiment—is now elevated to a separate service called the Machine-gun Corps. These changes in tactical methods have had the curious result of withdrawing from the ranks of combatants a large number of men whose technical skill as mechanics became indispensable in the workshop. Every country that has taken up arms is now beginning to realise that its male population is being redistributed into fighting men and their immediate followers; hospital patients and their attendants; factory hands employed in turning out the great variety of articles embraced in the term "munitions of war," and transport workers. In

countries where compulsory and gratuitous national service has been the rule of life and the law of the land for several generations, it is comparatively easy to exact this form of tribute from all classes, but in England, which is unaccustomed to State interference with personal liberty and freedom of contract, many and grave difficulties have been experienced. The setting up of Munition Tribunals has checked the tendency to "strike," but under Lord Derby our system of voluntary enlistment is on its trial; for we are under the necessity of increasing our contributions in men, materials and money to the partnership called the Quadruple Entente. Though we went into this great adventure as a second we have now become a principal, and the war, so far as the British Empire is concerned, seems only at its beginning. For the chronology of the war and details of daily occurrences the reader is referred to the ample Diary on pages 464–474; the present writer being responsible only for the treatment of the operations from a military point of view. And in this task he is still faced with the difficulty that dispatches are published only by the British Government, and these are often many months in arrear. At the time of going to press last year Sir John French had only accounted for his proceedings down to the Battle of the Aisne, and, therefore, our story to-day must begin with the October movements. The Belgian army printed a report of its work down to the end of December, but the French, Russian and Italian armies, have done no more than issue daily bulletins recording activities at different points by anonymous forces under anonymous leaders, and apparently directed to objects of purely local importance. They cannot therefore be represented with the fulness that is their due owing to the larger scope of their operations. With these preliminary observations we resume the narrative from page 782 in our last issue.

The circumstances in which the main army of the Allies in the west, composed of French and British troops, was driven from the French frontier to the east of Paris by the German army, after the latter had mastered the Belgian fortresses on the Meuse and compelled the Belgian army to take refuge at Antwerp, have been already narrated. It was shown that the pursuit came suddenly to an end in the second week of September, that General Joffre's army counter-attacked, and that the German army in turn retreated, covered by its rearguard, as far as the high ground astride the Aisne. So far the masses of troops had advanced and retired through the north-eastern departments of France, but at the end of September the French General attempted to manœuvre against the enemy's right flank. The plan was evidently discovered in time by the enemy, who retorted with a similar movement against the French left; both sides meanwhile holding their original fronts with a screen of troops. This reciprocal movement continued until, in October, the British army had reached a position facing east in front of St. Omer, which Sir John French made his headquarters. The British were now encadred by their Allies, who prolonged the line northward as far as the coast and southward as far as Compiègne, from which point the French line took an easterly bearing to the Argonne, whence it bent again southwards along the crest of the Vosges. We may say at once that substantially the same line exists to-day, in spite of all that has been done on each side to push the other back. After the retreat from Antwerp the Belgian army found itself reduced to 82,000 effectives with only 48,000 rifles. The French reinforced King Albert with a brigade of marines, and assigned him the mission of holding the line of the Yser from the sea to Boesinghe (N.E. of Ypres). For the first time the three allied armies are to act in unison. The Belgian front measured 36 kilometres, but a natural obstacle to a hostile attack existed in the dykes, canals and rivers which intersect the country hereabouts. Six of these waterways unite at Nieuport, where locks confine the land-water and allow the sea-water to enter at high tide. The Belgian army was placed in position fronting east to defend this section as follows: 2nd Division to cover Nieuport, from the sea through Lombartzyde and St. Georges to Mannekensvere; 1st Division to prolong to the right (southwards) as far as Schoorbakke, with an advanced post at Schoore; 4th Division to prolong to the right through Keyem to Beerst; the French marines with two regiments and two groups of artillery (from the 3rd Division) to cover Dixmude and protect the railway, which at this point crosses the Yser; the 5th Division to be posted in the environs of Noordschote west of the Dixmude-Ypres road; the 6th Division to prolong to the right (southwards) as far as Boesinghe, where it would join hands with the French army; the remainder of the 3rd Division, two brigades, to form a reserve at Lampernisse, west of Dixmude; the 1st Cavalry Division to cover the right of the Belgian army and co-operate with the French cavalry in reconnoitring towards Roulers; the 2nd Cavalry Division to form a reserve for the left wing of the army between Nieuport and Furnes. On October 16 contact is gained with the enemy at St. Pierre Cappelle and in front of Dixmude, and next day hostile artillery opens fire near the coast at Slype. The 5th Division is now marched towards Lampernisse to replace the reserve division which is moved to Avecappelle (west of Pervyse), and the 6th Division detaches a brigade to Noordschote to replace the 5th Division. On October 18 battle opens with the usual outpost affairs. The British fleet co-operates by bombarding the Lombartzyde–Middelkerke road near the coast. The Belgian 1st and 4th Divisions yield Schoore and Keyem and Beerst. Now, the 6th Division is moved up to Lampernisse, its place being taken by French troops; the 3rd Division is moved to Wulpen on the Furnes–Nieuport road; the 5th Division is advanced to Oostkerke on the Dixmude–Furnes railway. Later, the 6th Division occupies Pervyse to support the 4th Division, the 5th Division advances and, crossing the river at Dixmude, attacks the enemy at Vladsloo, while the French marines attack Beerst. Both places are captured and held by the Belgians until the approach of the enemy's main body, and are then evacuated. On October 20 the Germans take Lombartzyde near the coast and a farm in front of Nieuport. It is now ascertained that the Germans have deployed seven divisions as follows: 4th Division (ersatz) before Nieuport; 3rd Corps (reserve) prolongs to the left (southwards) to Keyem; 22nd and 23rd Corps continue the line as far as the south of Dixmude. The French staff now undertake to relieve the Belgian army by French troops at St. Jacques Cappelle (S.W. of Dixmude), and so reduce the Belgian line of defence to 20 kilometres. German guns shell the roads behind

the Yser in order to prevent the movement forward of reserves. German infantry capture the bridge at Tervate and establish themselves on the left bank (west) of the river in front of Pervyse. On October 23 the French 42nd Division arrived at Nieuport to deliver a counter-attack, but the Germans, favoured by a bend in the river, press their advantage at Tervaete and seize the bridge at Schoorbakke. The defenders of Dixmude are worn out. Then the French 42nd Division is brought south in aid of the Belgian centre, which had been driven back to the river Beverdijk between the railway and the Yser. On October 25 the attacks weakened, but the enemy resisted a counter-attack on the part of the 5th Division and a French brigade at Stuyvekenskerke in front of Pervyse. The Belgian army evacuated 9,145 wounded by train, while 1,000 remained in the field hospitals. It was now decided to inundate the ground between the railway embankment and the bank of the Yser. On October 26 it was discovered that many guns had become unserviceable and that only 100 rounds per piece are left. The line of the Beverdijk is abandoned and the railway is held *coûte que coûte*. Round Dixmude the tired defenders are aided by two battalions of Senegalese. The cavalry divisions have been withdrawn to the rear to hold the bridges over the canal between Furnes and Loo as lines of retreat. The reserve is reformed and, the engineers having now completed the preparations for flooding the terrain, the front of the 2nd Division is covered by an inundation on October 28, which slowly extends southwards. Ramscappelle (S. of Nieuport) is lost and won. The enemy at last abandons the ground to the west of the Yser before the rising flood, and the Battle of the Yser is thus ended. But the Belgian loss was great. 14,000 of all ranks have been killed or wounded, and the infantry is now reduced to 32,000 rifles. Half the artillery is *hors d'usage*. During November the Belgian advanced guards make attempts to re-establish themselves east of the Yser, and at Lombartzyde and Mannekensvere, assisted by the 81st (Territorial) French Division, but the inundation now impeded their advance to St. Georges, Schoorbakke and Tervaete. On November 10 the Germans captured Dixmude, which was now in ruins, but their attempts to cross the river were checked. German shells fell even at Furnes, 12 kilometres away. On December 28 the Belgians and French, after a fortnight's fighting round Lombartzyde, recaptured St. Georges in front of Nieuport, and the Germans then retained nothing on the left bank of the Yser, but listening posts and observation posts which were isolated among the floods. The Belgian army still retains this position. Meanwhile, General Foch had been placed in charge of the French operations north of Noyon, and having established his headquarters at Doullens he was visited on October 8 by General French, who concerted with him to place our four corps and the cavalry corps—now constituted of British and Indian regular divisions and a few Territorial units—astride the river Lys in order to advance on Armentières. The movement from the Aisne, to which reference was made in our last issue, had commenced on October 3, when Gough's 2nd Cavalry Division marched on Compiègne, *en route* for the new theatre of operations. A week later it came into contact with hostile cavalry to the north of the Béthune-Aire canal. On October 14 the 1st Cavalry Division joined the 2nd, and then the cavalry corps complete—under General Allenby—moved north towards the Belgian frontier to Berthen, south-west of Ypres. Our 2nd corps, under General Smith-Dorrien, reached the Aire-Béthune canal on October 11, and moved to the line Laventie-Lorgies in order to cover the left flank of the French army then engaged with the enemy. The French left was on the Béthune-La Bassée road, about Annequin. The intention of our 2nd corps (3rd and 5th divisions) was to wheel to the right and attack the enemy's right flank and rear, but only by desperate fighting could it reach the line Herlies-Aubers, and ultimately it fell back and entrenched, its right near Violanes, its left at Fauquissart. The enemy's position on the high ground south of La Bassée defied all efforts at capture by the French and British forces sent against it. On October 24 the 2nd Division was exhausted, and then the Lahore division of the Indian Army was moved up to Lacon in support. Our 3rd corps detrained at St. Omer on October 11, and advanced under General Pulteney through Hazebrouck to the line Armentières-Wytschaete. It was separated from the 2nd corps by General Conneau's French cavalry corps, but nevertheless Pulteney was to aid Smith-Dorrien if called upon. The 3rd corps found its march opposed at Meteren on October 13, but the enemy was driven back, and next day the corps occupied Bailleul and St. Jans Cappel, south-west of Ypres. The corps was now ordered to make a flank march and occupy the left bank of the Lys, between Sailly and Armentières; and meanwhile General French had ordered the cavalry corps to reconnoitre the banks of the Lys and secure the crossings, which, however, it was unable to accomplish. The 3rd corps eventually, on October 18, reached Armentières railway station with its reserve, having pushed parts of the 4th and 6th divisions across the Lys, astride the Armentières-Lille railway and fronting Lille; our cavalry was on its left and French cavalry on its right. The enemy was fronting west with his right on the Lys at Werwick and his left at Radinghem, covering Lille, and on this front he placed three or four cavalry divisions, the 19th Saxon corps and the 7th corps. Meanwhile our 4th corps (less one division) under Sir Henry Rawlinson, with Byng's cavalry division, had been co-operating with the Belgian forces retreating from Antwerp through Ghent, but it was brought under General French's command by telegraphic instructions from the Secretary of State for War about the middle of October, when Ypres was held by the 87th and 89th French Territorial divisions, and our 4th corps was covering Ypres to the east on the line Zandvoorde-Gheluvelt-Zonnebeke, having on its left four French cavalry divisions which drove back the enemy beyond the Forêt d'Houthulst, south-east of Dixmude. The Germans were now on the line Ostend-Thourout-Roulers-Menin-Lille-Lens-Arras. The British forces and Conneau's cavalry covered the line Ypres-Armentières. On October 18, General French ordered the 4th corps to advance eastward and seize Menin, midway between Roulers and Lille, the French cavalry having undertaken to cover the left of the advance about Roulers; but Sir Henry Rawlinson found the opposition too strong, and retired to his former position in front of Ypres on October 20. On this day our 1st corps arrived from the Aisne to St. Omer, and was directed to move north of Ypres, in

order to prolong our line and prevent an outflanking movement on the part of the enemy. Accordingly, Sir Douglas Haig advanced through Ypres, aided by our 3rd Cavalry Division on his right, and the French cavalry and Territorials, under General Bidon, on his left; he was also promised the co-operation of the 4th corps. On October 21 Haig was attacked on his right, while the French cavalry was withdrawn from his left, and so he halted south of the Forêt d'Houthulst, his left at Bixschoote, his right at Zonnebeke, covering Ypres. At this place, which was "congested with French troops," a conference was held between Generals French, Haig, Rawlinson, Bidon, and De Mitry, with the result that Mitry's cavalry and Bidon's Territorials moved out of the town to cover our left flank. Moreover, General Joffre had promised to send his 9th French corps to Ypres, and on October 23 one division arrived and relieved our 2nd division, and on the night of October 24–25 some French Territorials took the place of our 1st division. On October 25 our 2nd and 7th divisions, with the French 9th corps on their right, attacked, advancing north-east. After October 27 the 7th division and 3rd cavalry division were added to the 1st corps, when General Rawlinson and staff of the 4th corps returned to England to mobilise the 8th division. General Haig's command was disposed astride the Ypres-Menin road, with its centre in front of Gheluvelt, its right at Zandvoorde, its left on the Zonnebeke-Moorslede road, where it was attacked on October 29 in the centre. Next day the weight of the attack fell upon the right, the enemy capturing Zandvoorde Ridge, and driving back the 3rd cavalry division. The French 9th corps sent three battalions and a cavalry brigade to assist. The object of the Germans, as ascertained from captured documents, was to seize our line of retreat through Ypres by attacking our flank with the 13th, 15th, and 2nd Bavarian corps under General von Deimling. On October 31 a great effort was made to achieve this purpose. General Haig's 1st division was driven back under the eyes of General French, who was at the 1st corps' headquarters at Hooge. The headquarters of 1st and 2nd divisions were shelled, both commanders and six staff officers being killed or wounded. The 7th and 2nd divisions held on to the trenches, but Gheluvelt in the centre was stormed, and had to be recaptured with the bayonet after the 1st division had rallied. General Maud'huy's 10th army now stood on our right, and General Castelnau's army prolonged the defences southward, while the Belgian army and 8th French army was under General d'Urbal, the whole forming a group of armies controlled by General Foch. The opposing forces were commanded by the Crown Prince of Bavaria, von Fabec, von Deimling, and the Duke of Würtemburg. To resume the narrative of General French we must return to that area protected by Pulteney's 3rd corps and the cavalry corps under Allenby, which operated on the left bank of the Lys, and held the Ypres-Armentières road. The river Lys is here the frontier line, and so General Pulteney was protecting a corner of Belgium, being connected by his cavalry with the right of General Haig's command. Our three cavalry divisions held trenches like infantry, and were supported by the 7th Indian Brigade (less one battalion), and later on by four battalions from the 2nd corps and by a British Territorial battalion, so that General Allenby was reduced to the status of an infantry commander, except that he had his horse artillery, with which he supported the attacks of the French. The 3rd corps was on the right of the cavalry, and the artillery of the 4th division supported the attacks made by the French 16th corps. The 2nd Cavalry Division was relieved by General Conneau's French cavalry corps. Our cavalry had tried in vain to force the passages of the Lys, which were held by the enemy from Frelinghem down towards Menin. On October 20 the cavalry held the line St. Yves-Messines-Garde Dieu, and thence along the Wambeck to Houthem and Kortewilde; but the left and centre were thrown back to the Ypres-Armentières road at Wytschaete, St. Eloi, and Voormezeele. The 3rd corps lost and regained the village of La Gheir, the enemy's attacks being presumably based on Frelinghem across the river. On October 31 the 4th division took over the trenches of the 1st Cavalry Division. During the early part of November the Germans renewed their efforts against Ypres with the 15th and 27th and parts of the Bavarian 13th and 2nd corps, and about November 10 a division of the Prussian Guard corps was brought up from Arras to assist in the attacks upon General Haig's command, which was now reinforced by eleven battalions of the 2nd corps (all reduced in strength by serious losses), and the arrival of these enabled our exhausted 7th division to be sent to join the reserve. Later, two battalions of our Territorials and two yeomanry regiments were added to General Haig's command, the yeomanry being attached to General Byng's 3rd Cavalry Division. At this point we may state that the share of the British in the defence of Antwerp has been disclosed by the Report of Major-General Paris (Royal Marine Artillery), who commanded a brigade of Royal Marines and a newly-raised body of naval volunteers called the Naval Division. The marines (2,200 all ranks) lost 126 killed and wounded, and the naval volunteers 69 killed and wounded. In assisting the Belgians they delayed the enemy before Antwerp, and gained time for the destruction of war material. The marines reached Antwerp during the night of October 3–4, and occupied trenches facing Lierre, but the Germans crossed the Nethe on October 5. On this night the naval volunteers reached the front, and next day occupied the trenches between the forts on the second line of defence, the outer forts having already fallen. On October 8, General de Guise, the Belgian commander, assented to the withdrawal of the British troops; but already the enemy (about three German brigades) were in possession of their direct line of retreat, so that a detour of 15 miles to the north was made on roads blocked with fugitives from the city, Belgian troops and herds of cattle. Marching all night, the bulk were able to rejoin the commander and staff, who entrained with the marines at St. Gillies Waes on October 9. The immediate cause of 2,040 naval volunteers being compelled to take refuge in Holland is not stated. The rear-guard—one battalion of Royal Marines—entrained later, and on reaching Morbeke found the line cut. The engine being derailed the enemy opened fire and the battalion lost 388 men in the endeavour to cut its way through; the remainder

marched ten miles to Selzaate, where it again entrained. Colonel Seeley, the late War Minister, took part in this expedition, and Mr. Churchill, the First Lord of the Admiralty, was also present. Meanwhile our 7th division and 3rd Cavalry Brigade had landed at Ostend and Zeebrugge (October 6–8) and occupied the region of Bruges and Ghent. Too late to assist in the operations round Antwerp, they were pressed by the enemy so that their L. of C. troops had to re-embark and return to Dunkirk: commanded by Sir Henry Rawlinson as the 4th corps they retreated fighting from Ghent to Bruges, Thielt and Roulers, and thence to a position before Ypres, and here they made a stand until relieved by the arrival of the 1st corps on 21 October. As we have seen, the 4th corps was then attached to Sir Douglas Haig's command, and when General Capper's 7th division was finally withdrawn for rest and refitment only 44 officers were left out of 400, and only 2,336 out of 12,000 other ranks. Sir John French's third dispatch contained a list of 2,900 soldiers of all ranks who were recommended for various honours and rewards. Allusion was fittingly made to the visit of King George to his troops at the Front on November 30, and to the attachment to General Headquarters of the Prince of Wales. The medical arrangements are extolled, which have enabled a daily average of 11,000 patients to be treated on the line of communications. Only 500 cases of enteric had occurred. Twelve hospital trains were then plying between the front and the various bases, while rest depôts had been established near the fighting troops in order to reduce the wastage in men. Among other reinforcements there arrived the 27th and 28th divisions, principally composed of battalions that had been brought from India to England, but including a Canadian division under General Alderson. Mention is made of the Indian Cavalry Corps under General Rimington, which at its own particular request took its turn in the trenches, serving as infantry, as British cavalry have done. Yeomanry regiments have been attached to cavalry brigades and to infantry divisions, while a territorial battalion has been added to each infantry brigade. A certain territorial unit (the Artists' Rifle Volunteers) has been utilised as an Officers' Training Corps where men are schooled sufficiently to be turned into officers at the rate of a hundred a month. The British army was still encadred by General Foch's group of French armies, Maud'huy's 10th army being on our right, and D'Urbal's 8th army on our left. Sir John French's November dispatch showed us that he had four corps (less one division) under Generals Haig, Smith-Dorrien, Pulteney, and Rawlinson; three cavalry divisions (8 brigades) under General Allenby; also the Lahore and Meerut Indian divisions, and the Secunderabad cavalry brigade, Sir James Willcocks. These had all been fighting on the line Armentières-Ypres, aided by the following French troops: General Conneau's cavalry corps of four divisions, the 87th and 89th territorial divisions, and the 9th and 16th corps. The Belgian army, although shaken by its hasty retreat from Antwerp, gallantly manned the defences of the Yser river, and held the left of a long line extending from Belfort to the sea. The whole of these troops co-operated to preserve the fragment of Belgium of which Ypres is the centre. Until the arrival of the French the British line was so attenuated that General Pulteney's 3rd corps was at one time holding thirteen miles with six brigades of infantry and 152 guns, although the following formations of the enemy had been located in our front: the 2nd, 4th, 7th, 9th and Guard cavalry divisions and 4th cavalry corps; the 2nd, 3rd, 3rd Reserve, 7th, 13th Bavarian, 14th, 15th, and 19th Saxon infantry corps. They formed part of the German armies under the Crown Prince of Bavaria, the Duke of Würtemberg, and Generals von Fabeck and von Deimling, which General Joffre estimated at fifteen infantry corps and four cavalry corps. Sir John French was, however, in December able to shorten his line and so effect a closer concentration, since the enemy had then withdrawn from our front all cavalry except one division of the Prussian Guard, and also a considerable amount of artillery. On December 14, Sir John French and General D'Urbal planned an attack, which began with heavy bombardment by the two French corps and our 2nd corps. Then the 2nd corps advanced against points to the west and south-west of Wytschaete with two battalions, who, however, at nightfall were compelled to abandon the enterprise, after losing over 400 officers and men. The operation had been supported by the 2nd corps artillery and by the guns of the 4th division (3rd corps), while the remainder of our 3rd corps demonstrated with a view to preventing the enemy moving fresh troops against the 2nd corps. Similar attacks were made day by day, but apparently the failure of the French 32nd division on our left to make progress brought the operations to a conclusion on December 17, when "it was agreed that the plan of an attack as arranged should be modified." This decision seems to have led to another series of attacks two days later, when the Indian Corps was engaged, but the ground gained in daylight had always to be abandoned at night. Next day the enemy retaliated by an attack on Givenchy, which was defended by the Indian brigades including battalions of British infantry. These were aided by part of the 58th French division and by the Secunderabad cavalry brigade, and at midnight (December 20–21), Sir Douglas Haig arrived with part of his corps (1st division) and took over command from Sir James Willcocks on the line Béthune-Lacon. The enemy captured Givenchy, but failed to hold it, and so the operations of December 14–22 resulted only in loss of men on both sides. After three weeks of inactivity owing to snow and floods, the enemy, on January 25, began to shell Béthune and attack the point where the British right touched the left of Maud'huy's 10th French army, south of the Aire-La Bassée Canal. He also renewed his attack on Givenchy, north of the canal. Four days later the enemy again took the initiative, the German 14th corps with scaling ladders attempting to capture our "keep" south of the canal near La Bassée, but our 1st division repulsed the attack. Three days later our 4th brigade (2nd division) was attacked near Cuinchy, and the Guards were driven from their trenches at 2.30 a.m. Their counter-attack at 3.15 a.m. failed, but at 10 a.m. the divisional artillery bombarded the ground taken by the Germans, and then another counter-attack by two platoons of Guards recaptured the trenches. Sir John French, in his next dispatch, gave some account of the February movements. Our two "armies" were then holding a front of about 30 miles between La Bassée and Ypres under

Generals Haig and Smith-Dorrien respectively, but the composition of these armies is only partly revealed, nor is it stated that our opponents were the Duke of Würtemburg's 4th and the Prince of Bavaria's 6th army. South of the La Bassée Canal, the 3rd Coldstream and Irish Guards (1st corps) captured a locality known as "the brick stacks" on February 5–6. On February 14 the 8and brigade (27th division) was driven from its trenches east of St. Eloi, but next day it recaptured the lost ground. "Similarly, in the 28th division, trenches were lost by the 85th brigade and retaken the following night." These two divisions belong to our 5th corps, which occupied marshy ground in a very vulnerable part of the line, where trenches are most difficult to construct and maintain, and, moreover, many of the units "had only recently returned from service in tropical climates." This corps, therefore, during the month, "was constantly engaged in counter-attack to re-take trenches and ground which had been lost," and suffered heavy losses. By arrangement with General Foch, early in February, the French corps on our left was relieved by our three divisions of British cavalry, who manned some French trenches. On February 6 the enemy made a "half-hearted" attack on the 2nd cavalry division, but was repulsed with rifle-fire. On February 21, at 6 a.m., the enemy blew up a trench held by the 16th Lancers, and occupied 40 yards of our line. Our counter-attack by two squadrons, aided by a French reserve company, failed to recover the lost ground by 10 p.m. The Indian cavalry corps, at its particular request, was given some experience in dismounted work and trench warfare, and the Indian Corps, on February 17, repulsed an attack on its trenches. On February 28, a small party of the Canadian Light Infantry initiated a daring attack in the dark on the enemy's trenches near St. Eloi, and a few days later (March 2) a battalion of the 80th brigade (4th King's Royal Rifles) attempted a similar feat at some point not named. In both cases we gained some ground, but strong barricades of sandbags and timber soon brought the advance to a standstill. Sir John French, "about the end of February," considered that the French attacks at Arras and in the Champagne, and particularly "the need of fostering the offensive spirit in the troops after the trying and possibly enervating experiences of a severe winter in the trenches," demanded an attack by the British army, and when, early in March, the ground began to dry up, the preparations commenced by which the First Army was to advance, "supported by a large force of heavy artillery, a cavalry division, and some infantry of the general reserve," while the Second Army was to engage the enemy along its own front by "secondary and holding attacks and demonstrations." The object of the main attack was the capture of Neuve Chapelle and ground beyond, eastward towards Lille. Neuve Chapelle is a village about midway between La Bassée and Estaires, at the point where the macadamised road intersects the road from Béthune to Armentières. Behind the village (eastward) is the river Des Layes, on which is the Mill of Le Pietre. North of the village the enemy had established a strong post, which flanked the approaches to our objective. South-east of the village, across the river, is the Bois du Biez. On March 10, after thirty minutes' bombardment, three brigades advanced at 8.5 a.m. The 23rd brigade was stopped by wire entanglement, until the success of the 25th brigade and the Garhwal brigade at 11 a.m. caused the enemy to retreat, while our artillery at this time checked the advance of the enemy's reinforcements. After a delay of some hours the 21st, 22nd, and 24th brigades took up the fighting at 3.30 p.m. The 24th brigade was checked by machine-gun fire. North of the village our attack was arrested at the Mill of Le Pietre, between Neuve Chapelle and Aubers. The attack to the south of the village was checked by the enemy's post at a bridge over the river Des Layes (north-west of the Bois du Biez), where the 25th brigade and two brigades of the Lahore division were held up, so that a brigade (less one battalion) from the 1st corps was ordered to march through Richebourg St. Vaast to their aid, but the enemy also received reinforcements, and continued to hold the bridge. Meanwhile, the 1st corps had advanced on their front from Givenchy, but "did little more than hold fast the Germans in front of them." It thus appears that only ten brigades (30,000 infantry) had been employed in the main attack. Next day, the 4th corps and Indian Corps attempted a further advance, but weather prevented the support of the attack with artillery fire. On the third day (March 12) the enemy counter-attacked and was repulsed. Gough's cavalry division and a brigade of the North Midland (Territorial) division was now attached to the 4th corps, but could not be utilised. The cavalry then retired to Estaires. The German official *communiqué* says: "Our attack with a view to capturing Neuve Chapelle, after an initial success, met with a strong British superiority, and therefore was not carried through.' The Paris report says that the British army was "supported" by the French heavy artillery. Meanwhile, seven miles to the north, near Armentières, two brigades of the 4th division had captured L'Epinette, on March 12, by a night attack, while south-west of Wytschaete, where the 2nd corps stood, two battalions attempted to advance, but were "hampered by the mist and the approach of darkness" at 4 p.m. On March 14, the enemy attacked us at St. Eloi at 5 p.m., and drove the 27th division from its ground, but next day the 80th and 82nd brigades counter-attacked at 2 a.m. and recovered "all lost ground of material importance." The enemy again attacked at St. Eloi on March 17, but was repulsed. Our losses in three days' fighting (March 10–12) were 12,811 (572 officers), of whom 8,533 were wounded. We captured 1,687 of the enemy, and may assume that his otner losses equalled our own.

A further dispatch from Sir John French was published on July 12. It was dated June 15, and covered the operations on the British front in Flanders between April 17 and May 25. During this period General d'Urbal's French army was on our right, and a force of French and Belgians under General Putz on our left: those forces belonged to the command of General Foch. General French continued to control the two armies of Sir Douglas Haig and Sir H. Smith-Dorrien. The right of Haig's First Army extended as far south as La Bassée, the left of Smith-Dorrien's Second Army as far north as Ypres.

In the north our action has been defensive: in the south we have attacked in support of the French who have been operating south of La Bassée. Sir John French's dispatch deals with four distinct "battles": (1) that of Hill 60,

which was captured by our 2nd corps under Sir Charles Fergusson on April 17, and lost again on May 6; (2) that of Ypres, which was brought on by the repulse of a French division with a loss of 50 guns on April 22, when the enemy's use of asphyxiating gas came as a surprise; (3) the attack which was begun on May 9 by Sir Douglas Haig, north-west of Fromelles, and between Neuve Chapelle and Givenchy, in support of the French offensive north of Arras. Sir John French calls it the Battle of Festubert, and says that Haig was supported by three groups of French guns. This action was broken off on May 25 according to the dispatch, though the French bulletin of May 29 states, "Les troupes britanniques ont réalisé des progrès dans la direction de La Bassée"; (4) the operations of the 3rd corps by way of demonstrations which covered the inner flanks of the First and Second Armies, and held fast the enemy along its front. The troops under Sir Douglas Haig comprised the 1st and 4th corps and the Indian Corps; the 4th corps put in the 7th and 8th divisions, the 1st corps put in the 2nd division, and after May 19 the Canadian Division relieved the 7th division. On May 22 the 51st (Highland) T.F. division was attached to the Indian Corps. On May 24 the 47th (2nd London) T.F. division was put into the firing line. The battle of Ypres had three phases: (1) The first period in which we held our ground after the French retreat on April 22. (2) After the French had retaken Lizerne, but "no further progress had been made toward the recapture of the original line," when Sir John French, on May 1, withdrew the Second Army, and on May 4 occupied a new line in rear. (3) The defence of the new line by Sir Herbert Plumer against an attack by the Germans, which began on May 8 and continued till May 25. This action was described in great detail by Sir Herbert Plumer, whose report is reproduced in the body of the dispatch. Sir Charles Fergusson's operation on Hill 60 was planned, and the mining commenced by General Bulpin. The Hill was taken by the 1st Royal West Kent and 2nd Scottish Borderers, supported by their divisional artillery and by French and Belgian batteries. The 2nd West Riding and 2nd Yorkshire Light Infantry repulsed the enemy's counter-attack. The Hill was eventually lost by a "gas" attack in favourable weather conditions. Sir Herbert Plumer (5th corps) refers to the following bodies of troops under his command in front of Ypres: The Canadian Light Infantry; the 1st Suffolks, who were surrounded and overwhelmed; the 2nd Essex Regiment, which destroyed a small party of Germans; 1st York and Lancaster, 3rd Middlesex, 2nd East Surrey, 2nd Dublin Fusiliers, 1st Warwickshire, who counter-attacked as far as Frezenberg and were then driven back; 12th London, which reached the original trench line, 7th A. and S. Highlanders, and 1st East Lancashires, who attacked towards Wieltje. All these units were in action on May 8. On May 9 the 2nd Gloucestershire and 2nd Camerons repulsed an attack. On May 10 the Camerons, 9th Royal Scots, and 3rd and 4th K.R.R. repulsed an attack, while the 4th Rifle Brigade fell back to the west of Bellewaarde Wood. On May 11 "the superior weight and number of the enemy's guns" drove back the Camerons, Royal Scots, and 1st A. and S. Highlanders. The 31st heavy battery and Midland heavy battery were in action this day. On May 12 "the centre division retired into army reserve to rest," its place being taken in the trenches by two cavalry divisions, which, together with the artillery and engineers of the centre division, formed the "Cavalry Force" under General De Lisle. On May 13 the North Somerset Yeomanry attacked the enemy with the bayonet. A squadron of cavalry was reduced to sixteen men. Two cavalry brigades regained the original line of trenches, but were eventually shelled out of them again. The Essex and East Lancashire men retook their own trenches after being shelled out of them. The 1st Rifle Brigade expelled the Germans from a farm. The 1st Hampshire Regiment "killed every German who got within fifty yards of their trenches." The 5th London Regiment suffered great loss in holding their position. Every night from the rear men came up as working parties on fresh lines of defence, while the garrison of the firing line reconstructed its own trenches. The airmen destroyed hostile aeroplanes which came to reconnoitre and assisted the artillery in registering targets. On May 24 at 2.45 a.m. the enemy delivered a "gas attack," while the 2nd Royal Irish and 9th A. and S. Highlanders were asleep. Overcome by the poisonous fumes before time allowed them to put on respirators, they were driven out of a farm which the enemy now fortified. We failed to retake this locality, and in consequence "the left division" was obliged to retire to a new line of defence. Our First Army remained in front of Festubert, but also extended its right to the south of La Bassée in relief of some French troops during the summer, meeting with few adventures, though a brigade of Canadians on June 15 unsuccessfully attacked north-east of Givenchy. Our Second Army on June 2, with the 3rd Cavalry Division and the 1st Indian Cavalry Division, defended the Ypres salient against a violent attack at Hooge; and on June 16 attacked on ground to the east of Ypres with portions of the 2nd, 5th, and 6th corps, aided by the artillery of the 36th French corps. This army, too, had extended its front until its left rested at Boesinghe, three miles north of Ypres. The 11th brigade attacked on July 6. Attacked by the enemy at Hooge on July 30, we lost ground, in consequence of a new device for driving burning liquid into our trenches, but recovered it on Aug. 9, when the 6th division, aided by the French 36th artillery corps, attacked the enemy. Yet during a period of four months the British forces undertook no serious operation. It was understood that a shortage of ammunition was the cause of our inactivity. Yet local sorties and counter-attacks took a steady toll of our effectives, and large reinforcements were called for. Entire divisions of the so-called Kitchener Army went to France, and under the Minister of Munitions the ordnance factories were kept busy. Similar considerations perhaps affected the French and Belgian armies, who made no move.

We had become so accustomed to official bulletins from the Western front which contained such expressions as "lively cannonades," "artillery battle," and "intense and reciprocal bombardment" in Artois and Champagne, in the Argonne and Lorraine, in Belgium, the Aisne Valley and in front of Roye, that they had come to signify nothing, and the whole world was expecting to hear that the German Government had formally annexed the territory behind the German trenches, when on Sunday, September 26, the tidings suddenly came of a fierce battle

on the Saturday, which had ended in a definite advance of our lines in the Artois and Champagne regions. General Joffre had, it seems, planned a great attack for the end of September, and the share of the British Army in this enterprise is told in a dispatch published Nov. 2 On the extreme left of the line of 113 miles from Noyon to Ostend which is held by the enemy, a naval squadron under Admiral Bacon operated off Zeebrugge and Ostend. The Belgian army held the enemy in its front along the Yser. Our Second Army undertook a secondary attack in front of Ypres with the 5th corps (3rd and 14th divisions) at daybreak. General Haig's first Army, astride the La Bassée canal, delivered subsidiary attacks on its left with the 3rd and Indian corps, and part of 1st corps at Givenchy and elsewhere, while with the remainder of the 1st corps and the entire 4th corps it took part in the main attack south of the canal, having in immediate reserve the 3rd Cavalry Division and the 11th corps, and some 20 miles in rear, General Fanshawe's cavalry corps and Indian Cavalry Corps. The 28th division was lent by the Second Army as a further reinforcement. The main attack was delivered against the enemy's works which extended from Grenay astride the Lens-Béthune road through Vermelles and Auchy to the La Bassée canal. The 1st corps (Gen. Herbert Gough) was on the left, and the 4th corps (Gen. Rawlinson) on the right. The divisions stood from right to left as follows: 47th (Territorial); 15th (New Army); 1st; Capper's 7th; and Thesiger's 9th. It will be noticed that the old regular divisions are distributed among the new formations. The 7th and 9th divisions both lost their commanding generals. On the right of the British forces was the French 10th Army, south of Lens. The Germans, of course, counter-attacked, but at nightfall on Sept. 25 the village of Loos had been gained, and we were in a fair way to take into our lines Hulluch and Haisnes. The tide, however, receded the next day, although the reserve divisions (Guards; 21st; 24th) had arrived, and the 28th division was at hand. On Sept. 28 it became necessary to apply to General Joffre for help, and he sent the 9th French corps to garrison Loos and hold the portion of Hill 70 which we had gained. Yet on our left the enemy gained some ground in and about the Hohenzollern Redoubt, south-west of Haisnes.. The enemy on Oct. 8 delivered a strong counter-attack with 28 battalions in the first line and larger forces in support, and for 24 hours trenches were captured and recaptured, but at midnight on Oct. 9 the line held by the First Army "was identically the same as that held before the enemy's attack started." Our Third Army was not on the right or left, but nearer Paris; it was engaged in subsidiary operations, and the wing of the Royal Flying Corps attached to this army made distant flights and attacked with bombs the railways, troop trains, and stations. In five days the airmen dropped six tons of explosives beyond the German lines. In this battle we resorted to the use of asphyxiating gas by way of reprisals. The enemy's position has been described as a double line, which included works like redoubts, and a network of trenches and bomb-proof shelters (some of them 30 feet below the ground) with almost impenetrable head cover. We took over 3,000 prisoners, 26 guns, and 40 machine-guns. Their casualties were about 3,000 officers and 45,000 men. The region round Arras is called by the French Staff by its old name, Artois, and along the Arras-Béthune road General d'Urbal's 10th French Army, in prolongation of our right, made another attempt on Souchez and its surroundings—an attempt which seems to have been successful. Our Allies pushed forward somewhat on their left towards Givenchy-en-Gohelle, and to their right towards Vimy, capturing the Vimy Ridge, but no mention is made by either Sir John French or General Joffre of Lens, which lies between the two attacks. Another conflict took place simultaneously some 120 miles south of Brussels, in the Champagne region, and the centre of the fighting was Souain, where for a long while the French have been striving to wrest from the enemy the Reims-Grand Pré railway, that serves him as a lateral communication between his Laon position and the Argonne. The Germans still hold the railway, but an advance of our line for half-a-mile at one point and two and a half miles elsewhere is a notable gain of ground, although it cannot be shown on a small-scale map. The French were attacking on a front of fifteen and a half miles, which implies the engagement of about five corps from the armies of Generals Castelnau and Langle de Cary. The enemy was no doubt taken by surprise, as he surrendered 16,000 unwounded prisoners, as well as a lot of material. The French got within three miles of the railway, and on October 10 held the front Auberive-Souain-Tahure. A remarkable feature of these operations was the use made of aircraft during the fighting. For forty miles in rear of the enemy's battle-line our machines were interfering with the movement of his reserve troops and the supply of ammunition, by bombing the troop trains and the railway stations, and we may presume that other machines were guarding our own rearward services from similar attentions on the part of the Germans.

General Sir Ian Hamilton, late Inspector-General of the Oversea Forces, left London on March 13 to command the expeditionary forces of the Allies in the Mediterranean. Proceeding to Tenedos, an island off the coast of Asia Minor, where he conferred with Admiral de Robeck, who commands the allied fleets, and with General d'Amade, who commanded the French land forces, he witnessed "the amphibious battle" of March 18, and personally reconnoitred the north-west shore of the Gallipoli Peninsula from the isthmus near Bulair to Cape Helles. His account of the topography of this region is full and clear. He estimated the enemy's active forces at 34,000 men and 100 guns. From March 24 to April 7 the General was at Alexandria working out the allocation of troops to transports, and there he met the G.O.C. in Egypt and "troops drawn from all parts of the French Republic and the British Empire." Having framed "a thorough and systematic scheme" for flinging the whole of the troops very rapidly ashore at so many points as to confuse the enemy and prevent his concentration in force, Sir Ian Hamilton found himself compelled to wait for the weather—a few days of calm were indispensable—and this delayed operations until the end of April. The 29th division left Mudros Harbour on April 23 and reached the rendezvous at Cape Helles two days later. The landings were to take place at five beaches which indented a precipitous coast at the extremity of the peninsula near Krithia, while farther north, near Saribair Mountain, the

Australian and New Zealand Divisions were to create a diversion on his left, and the French Divisions to perform a like service on his right, on the south shore of the Dardanelles near Kum Kale. The inevitable *dénouement* was a heavy loss of choice troops before a landing could be effected and a maritime base established. Success was purchased at a cost of 602 officers and 13,377 other ranks, of whom 60 per cent. were wounded, the remainder killed or missing. The Turkish defences were formidable, and although covered by the fire of battleships, the infantry at more than one point were shot and drowned in the act of disembarking from the boats. The loss of senior officers was severe, but the seasoned regulars would not be denied, while the dauntless fighting of the Dominion troops, who had their spurs to win, compensated for any lack of training. From the morning of April 25 to the evening of the 27th fighting went on at intervals, when at last the invaders found themselves established at the foot of the peninsula on a line three miles long—the three brigades of the 29th division (less two battalions) on the left and in the centre, with four French battalions on their right, and beyond the French flank our South Wales Borderers held the extreme right of the line. In this order the force advanced two miles on April 28, till the enemy's entrenchments and counter-attacks stopped further progress within a mile of our objective—Krithia. And here, in the early days of May, the sadly diminished units of the 29th division sustained some powerful attacks by the Turks; but at the date of closing the dispatch on May 5, the 2nd Naval Brigade and the East Lancashire (Territorial) division were disembarking by way of reinforcements. On this date the ground gained by the troops was about three miles from the landing places, the Turks having withdrawn half-a-mile further inland. But the force was "crowded together under gun fire" on a narrow tongue of land; and in order to increase the depth of his position Sir Ian Hamilton resolved to attack again on May 6. The 29th division, consisting of the 87th and 88th brigades, the Lancashire Fusilier (T.F.) brigade, and the 29th (Indian) brigade, advanced on the left with its right directed on Krithia, while the French corps (2 divisions), reinforced by the British 2nd Naval Brigade, prolonged the line to the right as far as the Kereves stream, with a commanding ridge as its objective. A general reserve was formed of the 2nd Australian and New Zealand brigades and a Naval Brigade consisting of the Plymouth and Drake battalions. The Naval Brigade was to maintain communication between the two columns of attack. The first day's work won only 200 or 300 yards. The 29th division found the enemy's concealed machine guns very effective. Our guns fired shrapnel. We entrenched the ground won. The Turks assaulted the French with the bayonet at night. In the morning the 29th division again advanced, covered by our shrapnel fire, and again was stopped by "the cleverly sited German machine gun batteries," and also by Turkish snipers perched in the trees. After three hours' fighting the Turks delivered a counter-attack. In the afternoon a brigade was again held up by machine-gun fire. By a strong effort at the close of the day the 87th and 88th brigades, reinforced by a brigade from the general reserve, secured another 200 or 300 yards of ground. The troops were worn out and yet were ordered to entrench at sundown and prepare to renew the attack in the morning. On the third day the field batteries were aided by ships' guns, which bombarded the enemy fifteen minutes before the attack began at 10.30 a.m. The New Zealand brigade from the General Reserve, which yesterday had supported the last attack, now advanced and won about 200 yards, covered by the fire of our artillery and the machine guns of the 88th brigade. The French now reported that they were across the Kereves stream, but could not climb the hill to the west until the British had made further progress. At 5.30 p.m., therefore, a general attack was delivered with the aid of another brigade from the General Reserve (2nd Australian Brigade), after our heavy howitzers and ships' guns had bombarded the enemy's position for fifteen minutes. Then the French advanced and, coming under the fire of the enemy's heavy guns, recoiled before bursts of high explosive. They were rallied, and in the end the two French divisions secured the crest of the ridge. The net result of three days' fighting by 3 British divisions (8 brigades) and 2 French divisions was a gain of 600 yards. On the night of May 9–10 the enemy counter-attacked, but failed to retake the ground he had lost. The Australian and New Zealand Corps (less the 2 brigades detached for the Krithia operations) were meanwhile strengthening their position further north at Sari Bari, near Anzac Cove. On May 9 the 42nd division landed and relieved the 29th division. The General now divided his front into four sections and garrisoned them from left to right as follows: 29th division with 29th Indian Brigade attached; 42nd (East Lancashire) division; Royal Naval division; French 1st and 2nd divisions. Each division was to provide its own reserves and arrange its own reliefs. The enemy to the east of Krithia had fortified the bluff near Y beach into a bastion of defence which raked the front of our advance. This was called Gurkha's Bluff, from a gallant attempt to seize it on the night of May 10–11 made by the 6th Gurkhas and a successful effort on May 12 which resulted in a gain of 500 yards. The Gurkhas were aided by our heavy artillery and the guns of the *Dublin* and *Talbot*. It was a very pretty affair, as described in the dispatch, and cost only 113 casualties. Similar enterprises continued until June 4, the British front of about 4,000 yards being occupied by about 31,000 infantry, of which 7,000 formed the reserve, the whole being styled the 8th corps and Lieut.-Gen. Hunter-Weston being named as its commander. On June 4 our heavy guns bombarded the enemy for two and a half hours, and with half-an-hour's pause they recommenced for twenty minutes, when a feint attack was launched to draw the enemy's fire. Again we bombarded for thirty minutes, and then the advance began with fixed bayonets. The story of the day's fighting is a long one. Successes at one point were rendered nugatory by failures elsewhere. The French at 6.30 p.m. (now under General Gouraud, *vice* General d'Amade) were unable to participate in a final effort, and so a general gain of 200 to 400 yards was all that compensated for very heavy losses. The 14th Sikhs lost 75 per cent. and the Collingwood Battalion of the 2nd Naval Brigade was practically destroyed; the Manchester Brigade lost its General. Incessant attacks and counter-attacks until the end of the month considerably swelled our list of casualties. On June 21 the

French Corps lost 2,500 men. On June 28 our 87th, 156th, 86th and Indian Brigade shared a loss of 1,750 all ranks. On June 30 General Gouraud was wounded and handed over the command of the French Corps to General Bailloud. "All the resources of Egypt" were placed at the disposal of the Dardanelles Expedition by Lieut.-General Sir John Maxwell. The scene of operations is thus described by the Commander-in-Chief :—"The country is broken, mountainous, and void of supplies; the water found in the area occupied by our forces is quite inadequate for their needs; the only practicable beaches are small, cramped breaks in impracticable lines of cliffs; with the wind in certain quarters no sort of landing is possible; the wastage, by bombardment and wreckage, of lighters and small craft has led to crisis after crisis in our carrying capacity, while over every single beach plays fitfully throughout each day a devastating shell fire at medium ranges. Upon such a situation appeared quite suddenly the enemy submarines. On May 22 all transports had to be dispatched to Mudros for safety. Thenceforth men, stores, guns, horses, &c., &c., had to be brought from Mudros—a distance of forty miles—in fleet sweepers and other small and shallow craft less vulnerable to submarine attack. Every danger and every difficulty was doubled." It will be remembered that the Australian and New Zealand Corps, under Lieut.-General Sir W. R. Birdwood, had originally landed at Anzac Cove "to keep open a door leading to the vitals of the Turkish position; secondly, to hold up as large a body as possible of the enemy in front of them so as to lessen the strain at Cape Helles," and here the Colonials have held their own under a fire which has brought upon them within an hour 1,400 shells of all calibres, from 11-inch to ordinary field shrapnel. In their front is the peak of Koja Chemen Dagh, 971 feet above the sea, which is only two miles distant. In May and June desperate fighting continued for a month at Quinn's Post, where our fire trenches are mere ledges on the brink of a sheer precipice falling 200 feet into the valley below, and the Turkish trenches are only a few feet distant. On the night of May 9–10 our attack was followed by a counter-attack at dawn, during which Major-General Bridges, commanding the Australian Division, was killed; and the Corps Commander was wounded in a sortie on the night of May 14–15. On May 18–19 they were attacked by 30,000 Turks under General Liman von Sanders, the enemy using 9·2 and 12-inch guns, and losing 3,000 killed. Our own casualties were 600 killed and wounded. The enemy reinforced, renewed the attack on May 20–21. On May 25, with the aid of two destroyers, we raided an observing station about four miles north at Suvla Bay. From May 28 to June 5 Quinn's Post again became a centre for enterprises, especially mining and countermining and bomb attacks, and on the night of June 4–5 three separate affairs were carried out in order to distract the enemy's attention from our attack in the south. On the night of June 29–30 Enver Pasha ordered a fresh attack, which, he said, was to drive our Colonials into the sea, but the Turkish columns were repulsed with heavy loss. In August, Sir Ian Hamilton, having been strongly reinforced, effected a landing at Suvla Bay on the west coast of the peninsula, and launched a fresh series of attacks against the Turkish positions. But in spite of the devotion of the troops no progress could be made. In October Sir Ian Hamilton was recalled, and General Sir C. C. Monro went out to assume command.

Operations against the Turks in Mesopotamia began in November, 1914. An Indian brigade, with mountain batteries, had sailed from Bombay in October, under Gen. Delamain, who anchored off the Bahrain Islands, in the Persian Gulf, until arrangements were completed to enter the Shatt-el-Arab river. He seized Fao on Nov. 6, and the Turks attacked our camp at Saniyeh on Nov. 11. Then General Sir A. A. Barrett arrived with the remainder of the 6th division and the 6th Cavalry Brigade, which captured Saihan on Nov. 16, and on Nov. 23 occupied Basra, deporting the German consul to India. The Turkish garrison fled to Bagdad. We were assisted by the Sheik of Muhammarah. In December Gen. Barrett advanced to Kurna, at the junction of the Tigris and Euphrates. The Turks possessed Q.F. field guns, machine-guns, and mountain artillery, and were aided by Arab tribesmen. Our operations were assisted by the Euphrates Blockade Flotilla, consisting of armed launches, small steamers, and gun barges. Kurna was taken by a column—the 18th Brigade and 3 batteries—under Gen. Fry on Dec. 6–8. His force of 147 officers, 3,579 men, 16 guns and 9 machine-guns, British and Indians, captured 1,034 Turks and 4 guns.

On Jan. 20 a reconnaissance in force towards Rotah with two brigades concluded the operations of Sir A. A. Barrett, who, on account of ill-health, gave up the command to Sir John Nixon on April 9.

On April 12 the enemy delivered a serious attack on our communications with the sea coast near Basra, at Shaiba and Barjisiyah, which was repulsed by Gen. Mellis, with the brigades of Gen. Fry and Gen. Delamain (9 battalions, 3 batteries) and Gen. Kennedy's cavalry brigade. These operations are the subject of a Blue Book recently published. In June Sir John Nixon advanced to Amara, on the Tigris, and at the end of July to Nasiriyeh, on the Euphrates.

Gen. Nixon reported by telegram on Sept. 29 operations against the enemy's position over six miles in extent and astride the Tigris. Our attack was of an enveloping character, two brigades crossing to the left bank of the Tigris, and after a night march attacking the enemy's left, while another brigade held the enemy in front. The Turks had entrenched and wired the ground near Kut-el-Amara. Our outer flank was guarded by armoured cars and cavalry, which opposed the Turkish cavalry. A few aeroplanes are available for reconnaissance in flat country entrenched by canals with banks. We lost 500 men. The enemy's strength is not stated; but he fled towards Bagdad, leaving prisoners and guns in our hands. We are probably opposed by the Bagdad corps of Turks. We are now within a few miles of Bagdad, but our communications with Basra are difficult to protect against Arab tribesmen, who see in this conflict a heaven-sent opportunity for loot. British ladies and children are still held captive by the Turks at Bagdad.

Turkey's threats against Egypt have come to nothing, though great preparations were made last November by Djemal Pasha—ex-Governor of

Bagdad, ex-Minister of Marine, ex-General, and the bitter enemy of England.

Evidently the blow must be delivered at the Suez Canal, and of course this valuable line of communication had been secured against attack from the east; and besides, the approaches to the canal from Syria are extraordinarily difficult. The result was that at the end of January a few brigades of Turkish regulars and some Bedouins survived the desert marches and reached the canal opposite Ismailia. They attempted to cross in pontoons, covered by fire from behind the sand dunes near Bitter Lakes. But our naval flotilla on the canal put a stop to these proceedings, and then our troops crossed to the east bank and drove the enemy back into the desert. The pursuit by Camel Corps was prevented by a sandstorm, but we killed 400 and took 600 prisoners, besides deserters. Our naval forces and detachments of the Indian Army hold places like Aden, Perim, and Akaba, at the southern end of the Red Sea; and the vast schemes hatched in Germany to impress the Turks do not seem to come to fruition in the Middle East.

Turkey's greatest effort was, however, made, not against our forces in Egypt and Mesopotamia, but against the Russians under General Woronzow who defended the Caucasian frontier. Enver Pasha, with a large German staff, brought the 1st corps from Constantinople and part of the 13th corps from Bagdad to supplement the 9th, 10th, and 11th corps, whose stations were in Armenia. Affairs of outposts began as early as November, and the neutral territory of Persia was not respected by either side from diversionary raids. Tabriz was seized by the Kurds and Turks in January, but they were expelled after a few weeks' occupation. The centre of the real struggle was the region between Kars and Erzerum, where the Russians are served by a railway as far as Sarikamish, 15 miles from the Turkish frontier. The Turks were 500 miles from a railway, and under these circumstances about 150,000 men had to be supplied while in movement. The Russians by November 20 had reached Koprikeui on the road to Erzerum, but a month later the 11th corps had pushed them back to Khorsan. Meanwhile, the remainder of the Turkish army had been allotted a manœuvring rôle in mid-winter among snow-clad heights. Two corps were to envelop the Russian right at railhead, while a fourth corps was executing a turning movement further west towards Ardahan. These manœuvres proved Enver's undoing, for the 9th corps was caught in an isolated position and so handled by the Russians that it surrendered bag and baggage. The 1st corps had marched itself to a standstill by New Year's Day, and was driven out of Ardahan and forced back to Trebizond. The Russians also defeated the 10th corps, but their pursuit was stayed by the vigorous action of the 11th corps, which had had no marching. In turn, this corps also was routed, and fell back to Erzerum. Yet, of course, the Russians (100,000) were equally handicapped in advancing into Turkish territory in winter, leaving their railway further behind every day; and so it was made clear that no real gain would result from invasion. In May the Russians took the city of Van, and in June advanced to Mush, south of Erzerum, having cleared the Persian frontier as far south as Urmia. But at this time the Turks had withdrawn their main forces to the Gallipoli peninsula, and the Grand Duke Nicholas was being pressed in Galicia. In October, however, the Turks, relieved by the course of events in the Balkans, began to assemble another large force in Armenia—some 200 battalions drawn from eight corps—and as the Grand Duke Nicholas is now at Tiflis, as Governor of the Caucasus, another campaign in this region may result from the sporadic fighting recently reported.

In German South-West Africa a division of Union troops, including the Imperial Light Horse, the Rand Rifles, and the South African Irish, under General Botha, began operations last February by building sea-walls and constructing a railway protected by blockhouses along the coast from Walfish to Swakopmund. General Botha landed at Swakopmund on February 12, and started along the main line to Windhoek, where a wireless station connected this colony with Germany. The enemy in evacuating Swakopmund mined the public works, destroyed the pier, and poisoned the water tanks, leaving a rear-guard at Nonidas.

On March 25 General Botha's column was reported at Jackalswater and Riet. Another column, under Sir Duncan McKenzie, 200 miles farther south, operating from Luderitz Bay eastwards, on April 1 had occupied Aus, at the edge of a fertile region where water and pasturage were abundant. The enemy was found to possess aeroplanes. A third column, under Colonel Van der Venter, based on the Orange River, invading the south-eastern corner of this German colony, on April 3 occupied Warmbad, the railway terminus 27 miles north of the Orange, and thence advanced northwards 25 miles to Kalkfontein in order to co-operate with the Luderitz Bay column. A fourth column, under Colonel Berrange, operating from the east, was within a day's march of Rietfontein, 300 miles from the coast at Luderitz Bay. German strategy was based on a voluntary retreat into the interior after wasting the country and laying mines in the path of the invader.

General Botha appeared to regard his four months' campaign in South-West Africa as finished by his occupation of Windhoek on May 12, although the German authorities had set up a new capital at Grootfontein, 200 miles north. They left the high-power wireless station at Windhoek—by which with only one relay communication with Berlin was kept up—practically intact, as if certain of recovery of this valuable property at a later date. Our military operations were planned for an advance along the three railways converging at Windhoek—(1) eastward from Swakopmund at Walfish Bay, by Karibib; (2) eastward from Luderitzbucht (Luderitz Bay) by Aus to Keetmanshoop, and thence northward by Gibeon; (3) northward from Warmbad. Severe fighting took place at Gibeon on April 27, by which we lost 70 men. Sir George Farrar, the great mining engineer, who acted as A.Q.M.G. to General McKenzie's column, in the course of his duties as organiser of transport and supply, met with a fatal railway accident at a point beyond Aus.

General Botha, pushing his hardy troops 200 miles north of Windhoek, occupied Omaruru on June 21 and Otjivarongo on June 26. Our aeroplanes bombarded German troops and trains

at Otavi, which was seized on July 1, and a week later the German commander surrendered at Tsumeb, the railway terminus. German South-West Africa no longer exists, and General Botha's achievement cannot be too highly rated, for he alone of all the commanders in the field to-day has given the world a shining example both of that power which differs from the mere ability to fight—strategy, to wit—and of those higher tactics which, according to Hamley, "originating in the forethought and inventive faculty of the commander, effect great results with small loss, or make skill compensate for inferiority of force." His losses were 1,459 of all ranks, and his captures were 204 officers, 3,293 other ranks, 37 guns, and 22 machine-guns.

Our invasion of German West Africa compelled the enemy to destroy his great wireless station at Kamina (Togoland), which had communicated with Nauern, in Germany, Talora, in East Africa, Windhoek, in S.-W. Africa, and Pernambuco. It had only been a few months in operation.

Then a British Expeditionary Force sailed for Duala Harbour, off the Cameroon coast, and the Royal Nigerian Marine having cleared the place of mines, the troops landed in order to gain the back of Duala, the German capital. An attempt to destroy the bridge which would have cut off the retreat of the Governor and his staff was frustrated by the premature bombardment of Government House from the sea. So the Governor escaped to Yaunde, 140 miles east, where he still holds out with his troops.

§ Our Yola and Ibi columns are operating eastward from Nigeria, and the French troops pushing north and west from the Congo, and southwards from the Soudan—even a few hundred Belgians from the Congo are taking part in the conquest of the Cameroon country, attached to the French contingent (Sanga column) under Gen. Aymerich. But the real enemy is not the Germans, who are quite outnumbered, but geography and climate. Tropical diseases take toll of the troops in summer. The rainy season stops proceedings for months at a time; bush fighting is a speciality, and this guerilla war in mangrove swamps may last another year.

River expeditions up to Edea and Jubassi on a lighter afford the blue-jackets their opportunity for practice with a 6-inch gun. Up to the end of June nearly 1,500 German prisoners had been sent to England. Of the recent operations against Yaunde by an Anglo-French force we only know that a place 48 miles east of Edea, called Wumbiagas, was taken, after a 30 hours' engagement, on October 9.

German East Africa is the territory which prevents an all-red route being extended from the Cape to Cairo. It is larger than Cape Colony, and almost as large as Rhodesia. The coast-line is over 400 miles long, and of course our blockade should prevent the German colonists receiving help from overseas, but it is doubtful whether Portugal prohibits the importation of arms and munitions. It seems there is not enough force to deal with this colony as General Botha dealt with the German South-West. At the end of last year the enemy had taken the initiative and had seized Vanga, at the mouth of the Umba River; and our counter-invasion by an Indian force under General Aitken failed to secure the German railway terminus at Tanga. The commander therefore re-embarked and landed at Mombasa to join the local forces—the King's African Rifles and Colonial volunteers.

Meanwhile, an affair on the frontier 200 miles inland, at Mount Longido, had caused the Germans to evacuate this post. In January a strong British column, assisted by the Navy (which had already destroyed the port of Dar-es-Salaam and the wireless station), drove the enemy out of Vanga, and then, crossing the frontier, it occupied Jassin. The commander left a garrison at this post, which on January 19 was compelled to surrender to a superior German force. This reverse to our arms became known at Berlin, and so much was made of the story that our Government felt bound to explain the situation. An expedition to the island of Mafia took possession of this place, about 100 miles south of Zanzibar.

Another scene of operations was the region of the great lakes. One of the German ports on Victoria Nyanza was yielded to us in January. In March an engagement took place at Karunga, and at Taveta, east of Mount Kilimanjaro, some skirmishing was reported. In May our troops captured Sphinxhaven, on Lake Nyasa, after an action by armed steamers; and General Tighe arrived from India to command the forces. For some months past the Government has apparently been unable to proclaim any success in this quarter, although it is understood that the Union of South Africa has undertaken to reinforce General Tighe.

The French operations during the last year have been of the same character as those of the British and the Belgians, and the official *communiqués* have from day to day mentioned the localities of combats. With the exception of a section on the left of the British front held by the French for some months, the French armies have garrisoned a line of defence from the British right southwards to Compiègne; thence eastward to Nancy; and from that point along the crest or slopes of the Vosges as far south as Switzerland. In December last a *résumé* of the operations showed that originally the armies were commanded by Generals Dubail, de Castelnau, Ruffey, Langle de Cary, Lanrezac, Maunoury, Foch, Maud'huy and d'Urbal. Generals Sarrail and d'Esperey presently succeeded Ruffey and Lanrezac, and, later still, General Foch was placed in command of an army group. General Sarrail was sent to command l'Armée d'Orient in August. In this *résumé* the Supreme Command declared that the enemy had received seven checks, namely: in his *attaque brusquée* on Nancy, in the march on Paris, in the attempted envelopment of the left flank of the Allies in August and again in November, in the attempt to break the centre in September, in the coastal attack towards Dunkirk and Calais, and in the attack on Ypres. The opinion was stated that Germany had already exhausted her reserves, that her new formations were "mal encadrées et mal instruites," also that Russia had asserted her superiority over both Germany and Austria, and finally that the German check was bound to end in a retreat. The value of this opinion may now be questioned. It will be remembered that

General Joffre as the French Commander is in sole charge of the operations in France, although the War Minister has been twice changed. What influence, if any, the British Minister for War has exerted on the operations is not known, though we recall that Lord Kitchener awarded General Joffre the highest praise a year ago as "not only a fine general, but a great man." England has given France an ever-increasing support in the field, as our loss of 377,000 men proves.

In the Eastern theatre the largest number of troops have been employed, the longest marches have been made, and the most desperate battles have been fought. The casualties may be reckoned in millions. A year ago the Grand Duke Nicholas had invaded East Prussia as far as the Masurian Lake region and Galicia beyond the river San, while his central force had reached the frontier of Posen and Silesia. To-day the same armies, reduced and renovated, are behind the river Dwina between Riga and Dunaberg (Dvinsk), and on a line running due south in front of Minsk, crossing the Vilna-Lemberg railway and the river Pripet as far as Tarnapol on the Sereth.

The story of this great retreat would involve an account of many sieges, of wood fighting and village fighting, the attack and defence of bridgeheads, as well as pitched battles in the open country. The Russians have evacuated important towns, destroyed railways and bridges, and devastated entire districts in order to delay the pursuit and exhaust the enemy for the benefit of their allies in the West, and although for six months the Austro-Germans have enjoyed the prestige of victors, it may be doubted whether in a military sense they had not done better to protect their own frontiers and throw into the scale against General Joffre the mass of troops uselessly expended in West Russia.

The Russian armies under the Grand Duke Nicholas were originally grouped in three masses and assigned to East Prussia, Poland and Galicia respectively, and fortunately at the outset, when the Anglo-French army was in jeopardy, all the Russian armies progressed favourably, a fact which the French Government, at the moment of its quitting Paris, skilfully utilised to reassure the population, declaring that the mission of the French army was to hold on whilst the Russians delivered the decisive blow at the heart of the German Empire. On August 29, 1914, the French army was told that the Russians had completely invested the fortress of Königsberg, but no mention was made of the disastrous battle of Tannenburg three days before. General Rennankapf's army was expelled from East Prussia in September, but the Russians again invaded this region early in October under General Russky, whose success was, however, neutralized by the advance of a large German army from Posen and Silesia. This army marched to the Vistula, but was checked by the Blonie defences 18 miles from Warsaw, and in November the Grand Duke took the offensive from Ivangorod and drove it back to the frontier at Kalisch and Czestochowa. Meanwhile his southern army had occupied Lemberg and had cleared Galicia as far west as the river San, after leaving a force to invest Przemysl. Indeed it now seemed as though the Austro-Germans had met their match in the eastern theater, for the Grand Duke, at the end of three months, was presumably in possession of the largest Russian force it was possible to maintain in the field; in fact, Mr. Stanley Washburn at Warsaw had written on Oct. 27: "Russia is at last under way in this campaign, and the huge engine of her organisation is moving with a tremendous momentum." Yet the Grand Duke did not cross the frontier, and in December the Germans again took the offensive in Poland, and the Russians, to the amazement of their Allies, retreated from Lodz.

In January the Grand Duke's main army was between Lodz and Warsaw, its right on the Vistula, its centre along the Bzura river and the Lowitz-Skierniewice railway, and its left on the high ground about Rawa and the valley of the Pilitza—a front of about 60 miles. Behind was a stronger line of defence astride the Warsaw railway at Blonie, south of Novo Georgievsk, and Mr. Washburn now assumed that "Germany has made her maximum effort here," and he went on to assure us that "in April Russia will be in the best position she has been since the war started." But early in February the northern army, marching down the Szeszuppe river towards Tilsit and down the Inster river towards Insterburg, again encountered the enemy, and was again repulsed. It also failed to hold its ground east of the Masurian Lakes, near Lyck, and east of Willenberg. But the Petrograd *communiqué* intimated that its withdrawal was a voluntary one, undertaken with the object of "re-arranging" the forces.

The Kaiser now hurried to the Eastern frontier to congratulate his troops, and to confer the Order for Merit on General von Bulow, who commanded in the Masurian region. Later actions on the Niemen, north of Grodno, involved the destruction of the Russian 20th corps, which was enveloped by the enemy between Goldap and Suwalki. General von Hindenburg was in chief command of the 15 German corps concentrated in East Prussia, which the Russians had been unable to withstand or avoid.

Meanwhile the conquest of Galicia had been undertaken by a million Russians, formed in three armies under Generals Brussilov (based on Odessa), Russky (based on Kiev), and Everts (based on Brest-Litovsk). The Austrian forces were equally large, but after the battle of Rawaruska they retreated in two masses, the Hungarians through the passes of the Carpathians, the Austrians on Cracow, and then only Przemysl remained as an obstacle to the Russian advance after the six weeks' campaign. The defeated Hungarians were railed to Cracow, and early in October the German staff took charge of the operations. After reorganisation the Austro-Germans delivered furious attacks on Jaroslav and Sambor, north and south of Przemysl, which, however, were repulsed, and then the Galician campaign languished until January, when the Austro-Hungarian army, 26 corps under five leaders, the Archdukes Eugène and Josef, and Generals Dankyl, Voyrosch, and Broevitch, set out to relieve Przemysl and recover the lost territory.

Przemysl, situated by the river San, and covered by a girdle of forts on the surrounding hills, was deemed impregnable with a garrison of over 100,000 men. The nearest fort was five miles from the city, and along a perimeter of 25 miles the defences mounted 1,000 guns. Provisions for 80,000 persons for three months had been stored, and the fortress headquarters were in communication with the Archduke Frederick by wireless and searchlight signalling. Nevertheless, on March 22 the garrison capitulated, in circumstances which must always stain the honour of the Austrian army. The Grand Duke Nicholas, who had advanced as far west as the Donajec river, was now provided with a secure starting-point for the invasion of Hungary, since the great fortress, coupled with Lemberg, forms the centre of a railway system by which the region embracing Odessa, Kiev, and Brest-Litovsk could pour into Galicia whatever was needed by the troops in the way of reinforcements, food supplies, ammunition, and stores. The Russian movement westward towards Cracow had been harassed by the enemy's flanking operations from the Carpathians, and the question now was whether the projected advance southward over the great divide could be permanently checked from Cracow in the west or the Bukowina in the east. In April the advanced guards of General Ivanoff's armies were fighting for possession of the routes over the mountains between the Stryj valley in the east and the Biala valley in the west. Meanwhile General von Mackensen had advanced from Silesia eastwards into Galicia, resting his flanks on two lines of railway—the Cracow-Tarnow line and the Neu Sandec-Jaslo line—while General von Marwitz, from Hungary, operated northward along the railway, east of Bartfeld, which leads to Sanok, south-west of Przemysl; and then the Grand Duke's invasion of Hungary was definitely arrested by his defeat on 3 May on the river Donagie.

It was discovered that the Austro-Germans now had five armies in the field: (1) north of the Niemen, (2) in East Prussia, (3) in North Poland, (4) in Central Poland, and (5) the army of Galicia.

In the north the Germans advanced on the Russian province of Kovno, 80 miles east of Memel, as though striking out for the Petrograd-Warsaw railway about Vilna. These operations were supported by the Baltic squadron; and having captured on May 8 Libau, the Russian port, the Germans declared that they held the key to the Baltic.

By the end of June the Austro-Germans had recaptured Przemysl and Lemberg, and were driving the Russians right and left over the Dniester and the San and northward along the Lemberg-Brest railway. The northward drive continued during July between the Bug and the Vistula as far as the Lublin-Cholm railway, which the Russians were defending. Meanwhile, in Poland attacks upon the western defences of Warsaw were being pressed, and dispositions were made to approach the fortresses that line the banks of the Narew, N.E. of Warsaw, and also to cross the Vistula south of Warsaw about Ivangorod. Windau, on the Baltic coast, from which a railway runs to Riga, was taken July 21. August was a month of distress to Russia and her friends, of triumph to the Austro-Germans, who were advancing on the circumference of a circle through Ivangorod, Warsaw, Novo-Georgievsk, Pultusk, and Lomza, and as the retreating Russians hurried off to the north-east the enemy began to close in on both flanks from Brest-Litewski in the south and from Osowiec in the north, while operations from Kovno threatened to cut the route to Vilna, and Riga was menaced by attacks from Mitau—the centre of the railway system in Courland. Yet the enemy has never claimed any greater success in his pursuit than is accounted for by winning an ordinary battle, and in September the Russian armies seem to have reached their goal, after fighting 10 days in defence of Vilna, which the enemy captured on September 18. In the south the enemy stayed his pursuit after securing the fortresses in Volhynia—Dubno, Rovno, and Luzk—and the Russians continue to hold a corner of Galicia about Tarnapol, on the Sereth. In the course of these operations the belligerents redistributed the troops more than once, and finally they stood as follows: in the north Marshal Hindenburg was opposed to General Russky; in the centre the Archduke Leopold encountered General Everts; and in the south Marshal Mackensen followed General Ivanoff. Mackensen was then sent to Serbia, his place being taken by General Linsingen. The November bulletins show that fighting goes on at different points along a front of 600 miles, but the general situation is not likely to change during the winter, in view of the demands upon both belligerents by the armies in the Balkans.

Italy, who fifty years ago was compelled to accept the return of Venetia by way of gift from France, as the result of her alliance with Prussia and the unsuccessful battle of Custozza, denounced her treaty with the Triple Alliance and declared war against Austria on May 23. Italy maintained an Expeditionary Force in Africa three years ago of which the daily average strength was 2,835 officers and 84,186 men, and her conquest of Tripoli and Cyrenaica cost her 210 million dollars; but the experience thus bought is priceless to-day. According to Von Lobell, our ally has, in addition to her permanent garrison in Libya, 12 army corps, which are organised on the Continental model—namely, 96 three-battalion regiments formed into 48 brigades. The division includes two brigades and the corps two divisions. The law of service being two years for all, the Italians should be far better trained than our own "new" armies.

From his headquarters at Laibach the Austrian General Dankyl was compelled to witness the capture of the fortress of Malborghetto, the heights of Monte Nero, Gradisca, and the dockyard and town of Monfalcone by the Italians, who advanced beyond the frontier in the valley of the Isonzo on a front of 70 miles, while the Austrian main army was engaged in Russia. Across the Adriatic the Austrian and Italian airmen engaged in raids. Pola was visited by a dirigible which bombarded the arsenal, but the Austrian aeroplanes have retaliated by dropping bombs and "small arrows" on Venice.

The Austro-Italian campaign is difficult to follow, as the *communiqués* refer to localities unknown to the users of "Murray" or "Baedeker." In the region known as "The Trentino"

the Italian troops, far from acquiring the city of Trent, in the valley of the Adige, have failed to reach Rovereto, at the head of Lake Garda, although Ala was taken on May 27. An attempt is being made to reach Trent from the east by the road called the Val Sugana, but Austrian artillery positions to the north of Levico seem to check progress. Austrian forts on the "Folgaria Plateau" are said to be the chief obstacle to an advance on Rovereto from the east. The *Times* Special Correspondent writes:—"An examination of the country compels an admiration for the Austrians who studied the frontier line imposed upon Italy in 1866. Wherever a passage between the rocky barriers is possible a wedge is thrust forward into Italian territory—a wedge of lower mountain that dominates the valley ascending from the south." He declares, however, after referring to certain "dizzy cliffs" and "devilish peaks," to passes and spurs, to ranges and ridges, which are undiscoverable on travellers' maps, that "the first Austrian gate is forced." Minor operations are in progress in the Monte Tonale region, north-west of Trent, and on the great Dolomite road at the Col di Lana. On the eastern front the Isonzo valley is but partly won. Austrians continue to shell Monfalcone, and the Italians seem unable to take Gorizia, where Austrian troops entrain, or the bridgehead at Tolmino, higher up the river. General Joffre visited the Italian headquarters to confer with General Cadorna in the first week of September, and a series of assaults on all fronts was initiated during October with a view to detain Austrian forces destined for Serbia, but small, if any, territorial gain has resulted. The Austrians declare that the Italians attacking with 25 divisions lost 150,000 men.

Serbia, in November, 1914, was attacked in great force by Austria, who keenly felt the disgrace of her defeats in August and September. The last attack had been the sequel to the expulsion of the Serbian army from Bosnia, and it aimed at Valievo from the west, over the Drina. But now a mass of seven corps, under General Potiorek, swept into Serbia across the Drina, Save, and Danube. The Crown Prince of Serbia and Marshal Putnik retreated into the range of hills south of Valievo in mid-November. The Austrians followed, and, apparently believing that resistance was at an end, Potiorek dispatched three corps to the Carpathians to take part in the first advance against the Russians from Cracow at the beginning of December. Meanwhile the Serbians had replenished their ammunition from a source unsuspected, and on December 3 they struck home. After a three days' battle they routed the Austrians, who fled in all directions, and by December 15 the Crown Prince of Serbia had re-entered Belgrade, after taking 40,000 prisoners. For nine months the Serbians had been recuperating when the German plan to invade Serbia and unite with a new ally, Bulgaria, and so open the route from Berlin and Vienna to Constantinople, called Marshal Putnik again into the field.

The new campaign has arrayed Serbia and Montenegro against a practically equal force of Bulgarians in the east, who are intent on recovering the losses of the second Balkan war; an Austrian detachment in the west operating from Bosnia and Dalmatia; and an Austro-German army in the north commanded by Marshal Mackensen, with the Turks in the background. On the other hand, the declared scheme of Germany to force a way through Serbia to Asia—Mackensen's army has been dubbed the "Army of Egypt"—has brought to the direct aid of Serbia the whole of the Entente Powers, and it may be that the Balkans will prove to be, after all, the decisive theatre of war. But the concentration of troops from Russia, France, England and Italy must be a work of time, and meanwhile the Serbs and Montenegrins are playing the part of a covering force to their allies. In the middle of November, when this narrative must close, the greatest source of anxiety is the attitude of Greece and Rumania, who are being exhorted by both sides to abandon a neutrality favourable to the Entente Powers, and to enter the fray as belligerents. In the south an extraordinary situation has been created in that French and English troops are landing at Salonika and utilising Greek territory as a line of advance, while a German mission is able to go to and fro by the Sofia-Nish-Uskub railway and survey *en route* the Anglo-French proceedings; then, of course, a sudden decision by Greece to join the Central Powers might result in the destruction or capture of all the French and British troops that have entered Greek territory. Yet another complication is produced by the political condition of Albania, in which Italy is greatly interested, enabling guerilla bands to harass the rear of Serbian forces, and, in fact, since Nov. 5 the Albanians, in league with Bulgarian bands between Prizrend and Uskub, have severed our communication with Marshal Putnik's army. There can be no doubt that German diplomacy, backed by German military prestige, has succeeded in delivering a deadly thrust at the Quadruple Entente in a quarter that was deemed of small importance a year ago. The military plan of Marshal Mackensen was to envelop the northern part of Serbia, which is well served by railways. At his disposal were 20 divisions of Austro-German troops, grouped in two armies under Generals Gallwitz and Kovess. These were to cross the Danube at Belgrade, Semendria and Orsovo, and the Save at Obrenovatz, and move south astride the Morava. Then an Austrian force from Bosnia was to cross the Drina at Vishegrad and move up the Lim Valley, while a Bulgarian army under General Bojadieff was to join hands with Gallwitz by crossing the Timok near Prahovo. The German Marshal conducted the campaign from his headquarters at Temesvar in Hungary, communicating with the Bulgarian "Tsar" through the Duke of Mecklenburg, who journeyed to and from Sofia (220 miles) in an airship. Before these combinations the Serbian army slowly gave ground. Belgrade was occupied by the enemy on Oct. 9, Semendria two days later, Obrenovatz on Oct. 18, Orsovo on Oct. 23, and Prahovo on the same day. Marshal Putnik was supported on his left by the army of Montenegro, which on Oct. 27 faced the Austrians on the Drina, east of Vishegrad, covering the Sandjak. The enemy claims to have secured large stores of munitions of war which the Serbians had failed to remove or destroy on evacuating their arsenals. By the seizure of the Danube at its loop by the Iron Gates Rumania was cut off from Serbia, and at the same time the river was opened to traffic with the Bulgarian ports. Austrian monitors

convoyed supply vessels down to Widin, Lom Palanka, Nikopol, Sistovo and Rustchuk, and thus the munitions which had been refused a passage through Rumania found their way into Bulgaria by water, and thence to Turkey by the Sofia-Adrianople railway. The river had been blockaded hitherto by our naval contingent, which now was withdrawn, and the Russian armed launches took refuge in the Rumanian port of Gruia. The Central Powers were thus already independent of the Belgrade-Nish railway. On the other hand, the fleets of Russia and England and an Italian cruiser bombarded the Bulgarian coast at Varna and Dedeagatch. The Germans, on seizing Kladovo, on Oct. 25, set about fortifying this place against a possible attack from the side of Rumania.

Meanwhile another Bulgarian army had been formed in the south to check the advance of the Anglo-French expedition under General Sarrail and seize the Salonika-Nish railway. The Bulgarians took Veles, Kumanovo, and Uskub on Oct. 20–22. Both Uskub and Veles were recaptured, but again abandoned to the Bulgarians on Oct. 27–29. On the latter date the French occupied Strumnitza on Bulgarian territory, 20 kilometres east of the railway, and meanwhile the British 10th division had been brought from the Gallipoli Peninsula by Sir Bryan Mahon, which proceeded to take up a position on the right of the French in the vicinity of Lake Doiran. Early in November Nish fell into the hands of the Bulgarians after a defence of three days, and with it the Orient Express Railway became available for the transport of munitions of war into Turkey, who send in return to Central Europe raw materials for manufacture of which hitherto the Naval Powers had deprived the Central Powers. Meanwhile the Austro-German armies had steadily marched southwards and on Nov. 6 had reached the line Kralyevo-Krushevatz, thus securing the western railway that runs towards the River Drina. The Bulgarians occupied Leskovatz on Nov. 9, and now the three armies had reached the mountainous region in which progress became more difficult, and on Nov. 11 the Serbian army was holding the enemy at bay on the line Troglava-Maglitch-Alexandrovatz-Jastrebatz, in which position it covers its new capital at Mitrovitza in the plain of Kossovo.

THE NAVAL OPERATIONS.

THE article in WHITAKER'S ALMANACK for 1915 dealing with the naval operations of the war brought the general review down to the beginning of November, 1914. The course of events at sea had not been uniformly favourable to Britain and her allies. Enemy submarines had succeeded in sinking a number of large but relatively unimportant units, involving considerable loss of life, and hostile cruisers on the high seas were harassing our commerce in several areas with apparent impunity. A century had elapsed since England was last at war with an important naval Power, and there had arisen an idea that naval supremacy was synonymous with maritime invulnerability. There was nothing in the history of the wars of the sailing era to justify such a belief—we lost 267 warships in various ways, and many hundreds of merchantmen, owing to the activities of the enemy's cruisers and privateers, between Trafalgar and Waterloo—while, if the benefits of steam were impartially distributed, the submarine was at any rate a tremendous accession to the offensive-defensive armoury of the weaker Power. There was, however, a good deal of publicly expressed dissatisfaction with the manner in which the Navy was going about its work, and this—while in one sense flattering to the reputation of the Fleet—suggested that anything approaching a serious reverse at sea might have been followed by grave internal consequences, with whatever object initiated.

Following the plan adopted last year, it is proposed to deal with the naval operations, not chronologically, but under various headings indicative of the nature of those operations or their locality. Save in its widest aspect, naval warfare is of necessity made up of more or less isolated incidents, between which there is often not the slightest connexion beyond their common direction against the enemy. A strictly chronological record would therefore be exceedingly confusing, jerking the reader alternately from the South Seas to the north of Scotland, and from the eastern Mediterranean to the Straits of Dover. Before proceeding with the account of the naval operations it will be useful to summarise the administrative changes affecting the Fleet that have been made.

Admiral Prince Louis of Battenberg, who was appointed First Sea Lord on Dec. 10, 1912, tendered his resignation on Oct. 28, 1914, his grounds being that "at this juncture my birth and parentage have the effect of impairing in some respects my usefulness on the Board of Admiralty." Mr. Churchill, the First Lord, accepted his decision with a regret that was shared by the whole of the Navy, pointing out that "the first step which secured the timely concentration of the Fleet" was taken by him; and on Oct. 30 Admiral of the Fleet Lord Fisher was appointed in his place. The arrangement never looked like being a happy one, but no dispute between the First Lord and his principal naval adviser reached the ears of the public until May, 1915. The immediate issue was raised in connexion with the naval attack on the Dardanelles (*q.v.*), with the result that it was announced on May 26 that Mr. A. J. Balfour had accepted office in place of Mr. Churchill, and, on the 28th, that Admiral Sir H. B. Jackson had been appointed First Sea Lord. There seems to have been a period during which the former administrative heads of the Navy w content to absent themselves from the A miralty—a curious state of affairs in time of w Mr. Churchill was appointed to the post Chancellor of the Duchy of Lancaster in t Coalition Cabinet, and on July 4 Lord Fisl was appointed chairman of the Inventions Boa established to assist the Admiralty in ordinating and encouraging scientific effort its relation to the requirements of the na service. The Duke of Devonshire succeeded J George Lambert as Civil Lord of the Admira on June 4.

CLEARING THE OUTER SEAS.

Only the briefest details of the Coronel acti were available when the ALMANACK went press last year. The German squadron und Vice-Admiral Graf von Spee had succeeded crossing the Pacific without molestation, thou hunted by British, Australian, Japanese, a other forces, and a very inadequate Briti squadron was detailed to intercept it off Sou America. The latter consisted of the *Good Ho* (14,100 tons, 2 9·2-in. and 16 6-in. guns), *Mo mouth* (9,800 tons, 14 6-in. guns), *Glasgow* (4,8 tons, 2 6-in. and 10 4-in. guns), and the arm liner *Otranto*, which took no part in the su sequent action. Rear-Admiral Sir Christoph Cradock flew his flag in the *Good Hope*. It w officially stated afterwards that the *Canopus* h been ordered to reinforce Cradock's squadron, b as the three cruisers in it were all capable of least 23 knots, and the *Canopus* was an o battleship good for no more than 16 or so, it not easy to see what reason there could ha been in the selection. The German squadro encountered in the evening of Nov. 1, 191 consisted of the *Scharnhorst* and *Gneisen* (11,420 tons, 8 8·2-in. and 6 5·9-in. guns eac and the *Leipzig*, *Dresden*, and *Nurnberg*, of 3,2 to 3,592 tons, carrying 10 4·1-in. guns apiece.

The action began soon after 7 p.m., in a rou sea and with the British ships silhouetted again the afterglow of the sunset. Firing began 12,000 yards, with the squadrons rapidly co verging. The main-deck guns of the larg British ships were practically useless owing the sea that was running; but this had no effe on the heavy guns in the German ships, whi were handled with such skill that the third sal caused great fires to break out on board both t *Good Hope* and the *Monmouth*, the former blo ing up with an immense explosion less than minutes after the beginning of the action. T *Monmouth*, badly crippled forward and pra tically unmanageable, did her best to stand towards the enemy, but succeeded only drawing upon herself the concentrated fire their guns. By this means, though making h own destruction doubly sure, she helped detain the enemy while the *Glasgow*, damag and altogether too small to affect the issue, ma good her escape. The Germans sustained damage, but the *Good Hope* and *Monmouth* we lost, with their entire crews—respectively 919 a 735 officers and men. The available evider goes to show that the conditions were such as render it impossible for the Germans to attem any rescue work.

This defeat was the heaviest blow we h suffered at sea since the war of 1812, a although our ships were greatly inferior in gu

power and general fighting characteristics (speed alone excepted), this but emphasises the faultiness of the strategical dispositions which brought it about. Leaving out the small cruisers, which contributed but little towards the result, the Germans opposed a broadside of 12 8·2-in. and 6 5·9-in. guns to the British 2 9·2-in. and 17 6-in. The official reports show that the main-deck guns (10 of the British 6-in. and all the German 5·9's) were of no practical use, so that Cradock was left with 2 9·2 and 10 6-in. against 12 8·2-in. In mere weight of metal this represents a German superiority of 3,306 lb. against 1,460 lb., and to this must be added the great advantage conferred on the enemy by his single-calibre armament.

Immediately upon the news of this disaster reaching England vigorous steps were taken to retrieve it. On Nov. 11 Vice-Admiral Sir F. C. D. Sturdee left England in the *Invincible*, battle-cruiser, accompanied by the *Inflexible*, a sister ship, and, on his way across the Atlantic, was joined by the armoured cruisers *Carnarvon*, *Cornwall*, and *Kent*, the protected cruisers *Glasgow* and *Bristol*, and the auxiliary cruiser *Macedonia*. Assuming that it would be von Spee's first endeavour to get across to the West African coast, a sweeping movement was carried out to the south-west, but without success, and the squadron put into Port William on the morning of Dec. 7 to coal. In ten minutes under 23 hours the *Canopus*, lying in Port Stanley, opened fire on the leading ships of the German squadron as they came up from the south with the evident intention of attacking the little colony and getting what they could out of it before continuing their journey.

The result of the action which ensued was a foregone conclusion, for the opposing forces were far more disproportionate than had been the case at Coronel. It opened with the fleets in parallel columns, the *Inflexible* firing the first rounds at a range of 16,500 yards; but as the enemy began to feel the effect of our superior fire his light cruisers began individually to turn away, the larger vessels lending them what support they could by turning in towards the British line. The *Leipzig* was chased by the *Glasgow* and *Cornwall*, and, after a four hours' running fight at long range, was reduced to a sinking condition, and capsized and sank at 9 p.m. The *Kent* was despatched in pursuit of the *Nurnberg*, which nominally had the advantage in speed; but, thanks to the great efforts of the engine-room staff and the sacrifice of almost everything on board that would burn, she was able to get the enemy within range by 5 o'clock, and by 6.35 the *Nurnberg* had ceased fire, being well alight forward. The *Kent* closed in and found the colours still flying over the German cruiser, but after another few rounds these were hauled down. When the *Nurnberg* sank about an hour later a group of men stood on her decks waving an ensign as she went under. The *Dresden* made use of her good speed and of the pre-occupation of our cruisers to get away.

The *Invincible* and *Inflexible*, with the slower *Carnarvon* astern, devoted their attention to the *Scharnhorst* and *Gneisenau*. With 12-in. guns opposing their 8·2's, and with a wide margin of speed against them, the fate of the German ships was already sealed, it being only a matter of time and of the range the British ships might see fit to maintain. At 4.17 the German flagship turned over and disappeared, her colours still flying, and the fight was continued single-handed by the already badly hit *Gneisenau*, which, according to the evidence of survivors, went on firing until her last round was gone. By that time she was simply a shattered mass of metal, and at 6 o'clock, ten minutes after the British ships ceased fire, she suddenly heeled over and sank, her flag still flying.

The battle from first to last was a sound exposition of the proper use of superior naval force, the only weak spot in it being that our ships were so disposed that their own smoke sometimes hindered their gunners. The German Press complained that we had had to send a vastly superior force to settle with von Spee—ignoring the fact that the basis of our naval policy is and must be the ability to meet the enemy in superior force in order that there may be no doubt as to the issue. The following shows the comparative strength in broadside fire of the forces engaged in the three separate fights into which the battle is divided:—

1. *Invincible* and *Inflexible* (17,250 tons each), combined broadside, 16 12-in. guns = 13,600 lb.
   Scharnhorst and *Gneisenau* (11,420 tons each), combined broadside, 12 8·2-in. and 6 5·9-in. = 3,834 lb.
2. *Cornwall* and *Glasgow* (9,800 and 4,800 tons), combined broadside, 11 6-in. and 5 4-in. = 1,305 lb.
   Leipzig (3,200 tons), broadside, 5 4·1-in. = 176 lb.
3. *Kent* (9,800 tons), broadside, 9 6-in. = 900 lb.
   Nurnberg (3,400 tons), broadside, 5 4.1-in. = 176 lb.

The entire crew of the *Scharnhorst* was lost, but 222 officers and men were picked up from the other ships. The British loss was four men killed and seven wounded. While the fight was in progress the *Bristol* and *Macedonia* destroyed two supply ships which had been in company with the German squadron.

Between the Coronel fight and its sequel it had fallen to the lot of a unit of the young Australian Navy to account for the most adventurous and troublesome of all the enemy's cruisers on the high seas, the *Emden*. Between Sept. 10 and Oct. 20, 1914, this little vessel had sunk twenty merchantmen in the Indian Ocean, besides shelling Madras, and on Oct. 30 had sunk the Russian cruiser *Jemtchug* and the French destroyer *Mousquet* at Penang. The total value of the ships and cargoes destroyed by her is estimated at three and a half millions. It is difficult to account for Captain von Muller's last exploit. In the early morning of Nov. 9, 1914, the *Emden*, inadequately disguised with a dummy funnel, came into view of the cable operators at Keeling-Cocos Island, due south of Sumatra, and proceeded to land an armed party of 43 officers and men to destroy the cable station. But she was recognised as soon as seen, and the news was at once sent out by wireless and picked up by H.M. Australian cruiser *Sydney*, employed on convoy duties. She made for the scene at full speed, and by 9.40 a.m. the *Emden*, having abandoned her landing party in order to meet her opponent at sea, had begun her second and last fight. The *Sydney* was her superior in speed and gun-power, having a broadside of 5 6-in. guns (500 lb.) against 5 4·1-in. (176 lb.), and this probably accounted for the fact that the *Emden's* shooting, "very accurate and rapid to begin with, seemed to

slacken almost immediately." After a running fight of two and a half hours the German vessel was driven ashore, and, after ignoring three inquiries as to whether she surrendered, hauled down her flag to a final salvo at 4.35, the *Sydney* having been absent for some time in chase of a British collier in charge of a German prize crew. The *Emden's* losses were about 120 killed and 50 wounded; the *Sydney's*, 4 killed and 12 wounded. The German commander was among the saved, and the cruiser is being salved. The landing party commandeered a schooner and escaped, the majority of them getting back to Germany.

The only other enemy ship which had given any trouble in the western Pacific was the *Königsberg*, whose sole notable exploit had been the surprising and sinking of the cruiser *Pegasus* while at anchor at Zanzibar in September, 1914. After this incident a "sweep" was organised with the object of finding her whereabouts, and she was discovered at the end of October about six miles up the Rufigi River, on the east coast of Africa, opposite Mafia Island. As it was not then expedient to proceed with her destruction, colliers were sunk in the only navigable channel to prevent her egress, and there she remained until July, 1915, when the shallow-draught monitors *Severn* and *Mersey* completed her demolition. In the course of these operations everything on board the *Mersey*—including the [illegible] faces of the crew—was painted green, and a quantity of foliage was so arranged as to give the vessel the appearance of a floating island. Thus disguised, she drifted up the river to within easy range of the *Königsberg*, which was quickly set on fire from stem to stern.

The end of the German cruiser campaign against the commerce of Great Britain and her allies came very tamely. The *Dresden*, which had doubled back into the Pacific after the Falklands action, was at last discovered off the island of Juan Fernandez on March 14, 1915, by the cruisers *Kent* and *Glasgow* and the armed liner *Orama*, and, after a brief engagement, was blown up by her own crew to prevent capture—she had, of course, no chance against her opponents. It transpired that the *Dresden* was in Chilian waters when the attack was made upon her, and the British Government made full apology when the circumstance was brought to their attention, pointing out at the same time that the *Dresden* had not been interned, that her colours were flying, and that her guns were trained as for action when sighted. The German armed liners *Kronprinz Wilhelm* and *Prinz Eitel Friedrich* arrived at Newport News, U.S.A., on March 11 and April 11 respectively, and were subsequently interned; and on March 20 the Admiralty announced that there was every reason to believe that the cruiser *Karlsruhe* "had been sunk in the neighbourhood of the West Indies at the end of November." Other cruisers and armed liners were interned at various ports—the *Cormoran* at Guam, the *Preussen* at Sarang Bay, the *Geier* at Honolulu, the *Berlin* at Trondhjem, and so on; but the destruction of the *Dresden* marked the real end of this phase of the war. It had been singularly ineffective, especially when it is remembered that Admiral Sir A. K. Wilson had dwelt with gravity upon its dangers, and that another distinguished Admiral had demanded 300 cruisers, as recently as 1911, for the protection of our commerce. The total number of British ships destroyed had been 54, the last being the barque *Conway Castle*, sunk by the *Dresden* off Mocha Island on Feb. 27, 1915—less than seven months from the outbreak of war.

In Home Waters.

The general position in home waters—that is, in the area of British and German naval concentration—was that the German Fleet was far too weak to hope or attempt to challenge the British Navy to a pitched battle; while, on the other hand, there was no reason why the British Fleet, having the complete control of all the seas save the Baltic, should shoulder the grave risks that would be involved in attempting to force action upon a fleet content to remain quiescent and to allow maritime command to go by default. On both sides, however, there was a good deal of wild talk—official, as well as journalistic—the argument on this side of the North Sea being that the Germans were afraid to come out, and, on the other, that the British Fleet was afraid to go in. The essential point is that neither side had anything to gain by taking the offensive. The Germans, if they came out, could only look for annihilation at the hands of vastly superior forces, while if the British Fleet went to seek it in its own fastnesses it would certainly sustain heavy losses through mines and submarines; it would not make our command of the sea any more complete than it was before; and, unless the bombardment of enemy naval bases were followed by their military occupation (which was out of the question), it could inflict no real, permanent damage on the enemy.

The position was, therefore, that both sides were waiting—Britain with the command of the sea, Germany without it. In order to maintain our command against raids, submarine attack, and the attempted escape of fresh hostile cruisers on to the trade routes, it was necessary that an efficient patrol service should be maintained, not only down the East Coast and across the northern exit from the North Sea, but in all neighbouring waters where enemy submarines might be expected to penetrate. This patrol service inevitably involved occasional losses, though its reorganisation has fortunately prevented any repetition of such an incident as that of Sept. 22, 1914, when three large cruisers were sunk within a few hours. On Nov. 11 the gunboat *Niger* was sunk off Deal by a German submarine; and this comparatively small loss was followed on Jan. 1, 1915, by the torpedoing of the battleship *Formidable*, of 15,000 tons, in the Channel, off Start Point. The *Formidable* was one of a fairly large squadron which cruised the Channel regularly—a circumstance which would naturally add to the chances of a submarine, as she would know her points of vantage beforehand—and on this occasion the squadron was without any destroyer screen, although submarines were known to be in the vicinity. The ship was torpedoed soon after midnight, and a large proportion of the crew were lost. It is of some importance to observe that this was the last warship "submarined" in the Channel down to the end of October, 1915. In the Irish Sea the armed liner *Bayano* was torpedoed and sunk on March 11, while the *Viknor* and *Clan McNaughton*, of the same class, foundered in that region on Jan. 20 and Feb. 24 respectively. It was suggested in Parliament that these vessels had been rendered

unstable through the mounting of guns on their upper decks, but this was denied.

Towards the end of 1914 the enemy began a series of "raids" on the East Coast, with an object that has yet to be elucidated. The first, on Nov. 3, 1914, was aimed at Great Yarmouth; but the bombarding cruisers took their range from the wrong line of buoys, with the result that all their shells fell short even of the beach. They were not attacked by any British force, but were "shadowed" on the way back by some light cruisers, but by nothing capable of bringing them to action. One of the raiding vessels, the armoured cruiser *Yorck*, fouled a mine when entering Wilhelmshaven on the return journey, and was sunk, with a loss of about 300 officers and men. As the vessels retreated they dropped a number of mines, one of which sank the British submarine D 5.

The second raid was made on Dec. 16, and was directed against Hartlepool, Whitby, and Scarborough. This was more "successful," as the attacking ships succeeded in doing considerable damage, besides killing about 130 people, of whom a small proportion were soldiers. The enemy cruisers were attacked by a flotilla of British destroyers, but without success, and a sea fog coming in from the east enabled them to elude a powerful battle squadron which, had it brought them to action, would undoubtedly have destroyed them. Mines were again dropped in profusion by the retreating German ships, and several small vessels, including some mine-sweeping trawlers, were sunk by them. Otherwise there was no material naval loss on either side.

It will be noticed that while the ships engaged in the first raid got away without interruption or interference, those that came on the second occasion owed their escape purely to a chance fog, and, possibly, to a disposition of our forces which just failed to achieve the desired end. The third attempt, however, was fatal. On the morning of Sunday, Jan. 24, 1915, a force of British cruisers and destroyers under Vice-Admiral Sir David Beatty fell in with a German fleet steaming towards the East Coast, the enemy force comprising battle-cruisers, armoured cruisers, light cruisers, and destroyers. From the composition of the enemy fleet it is evident that it had some important object in view; but it was encountered off the Dogger Bank by a British force similarly constituted. The result can hardly be termed a fight; it was rather a partially successful attempt on the part of the enemy to get back to their bases as quickly and safely as possible. It was, therefore, a stern chase, so that broadside fire would not give a proper comparison between the contending forces. So far as armoured ships are concerned, these were as follows:—

BRITISH—
Lion, 8 13·5-in. guns.
Tiger, 8 13·5-in. and 12 6-in. guns.
Princess Royal, 8 13·5-in. guns.
New Zealand, 8 12-in. guns.
Indomitable, 8 12-in. guns.

GERMAN—
Derfflinger, 8 12-in. and 12 5·9-in. guns.
Seydlitz, 10 11-in. and 12 5·9-in. guns.
Moltke, 10 11-in. and 12 5·9 in. guns.
Blücher, 12 8·2-in. and 8 5·9-in. guns.

The action should have been a test between two theories—the British, which favoured heavy guns firing slowly and accurately, and the German, which favoured smaller calibres firing more rapidly. There were 40 heavy British guns against 28 German; but there were 56 medium German guns against 12 British. Owing to the tactics adopted by the enemy, however, no such test eventuated. The *Lion*, leading the British line, opened fire on the *Blücher*, the rearmost German vessel, at 20,000 yards, and scored her first hit 17 minutes later. As the enemy were gradually overhauled, the *Lion* shifted her fire to other ships in the enemy's line, and her consorts did the same as they came up. The *Blücher* was thus attacked successively by all our cruisers, her destruction being completed by a torpedo from the *Arethusa*. The *Lion* sustained an injury to her steam-pipe which put her out of the chase, the immediate command falling to Rear-Admiral A. G. H. W. Moore. Hits continued to be made on the enemy's ships, and the *Derfflinger* and *Seydlitz* were badly damaged and seen to be on fire; but the enemy had maintained his speed so well that he was able to gain the shelter of his own mine-fields without sustaining any further actual loss. Sir David Beatty reported that prisoners declared the light cruiser *Kolberg* to have been sunk, but there is no confirmation of this. The action was remarkable for the high speed at which it was fought, the average rate for some hours being over 28 knots. An attempt on the part of the enemy's destroyers to attack the battle-cruisers was easily driven off by our own flotillas, and submarines which intercepted the squadron were ineffective. While our light craft were standing by to pick up survivors from the *Blücher* they were attacked by a Zeppelin and a seaplane, but without effect. It may have been the sight of British cruisers and destroyers standing by a sinking armoured ship which gave rise to the German conviction that the ship in question must have been British. After hesitating for some time between the *Lion* and the *Tiger*, the enemy gave out the latter as having been sunk. In point of fact, we sustained no material loss, though the *Lion* and the destroyer *Meteor* had to be towed home. Our casualties were 15 killed and 28 wounded. Of the *Blücher's* nominal complement of 847, 283 were saved by our vessels.

This was the last raiding attempt made down to the end of October, but a number of minor incidents occurred in connexion with the patrol and outpost services. On May 1 a series of skirmishes occurred in the North Sea, resulting in the sinking of the destroyer *Recruit* by an enemy submarine, the torpedoing of the armed trawler *Columbia* by two small torpedo-boats ("outpost boats") built at Antwerp, and the subsequent destruction of these two vessels by a division of British destroyers from Harwich. Six days later the destroyer *Maori* struck a mine while cruising off Zeebrugge, and her crew were made prisoners, as well as a boat from the *Crusader* which was sent to pick them up. On May 27 the converted liner *Princess Irene* blew up in the Medway through unknown causes, everyone on board being killed. The incident was remarkable as occurring in almost the same spot, and under similar circumstances, as the destruction of the battleship *Bulwark* six months before. On July 26 one of our submarines succeeded in sinking a German destroyer of the G196 group in the neighbourhood of the German coast, while the opening days of August witnessed

another series of incidents similar to those of May. The armed liner *India* was torpedoed and sunk by a submarine off the Norwegian coast on the 8th, and the same day another auxiliary, the *Ramsey*, was sunk by the German auxiliary mine-layer *Meteor*. The latter, however, was quickly overtaken by a squadron of cruisers, and was scuttled by her own people, who took to the boats and were saved from capture by the approach of a submarine flotilla, before which our cruisers withdrew. On Aug. 9 the destroyer *Lynx* struck a mine in the North Sea and sank, with a loss of 65 officers and men, and on the 22nd another Antwerp "outpost boat" was brought to action and sunk by two French destroyers off Ostend. On Oct. 28 the armoured cruiser *Argyll* ran ashore on the east coast of Scotland in heavy weather and became a total loss. She was a sister ship to the *Roxburgh*, which had been unsuccessfully torpedoed by an enemy submarine in June.

These are the main incidents of the North Sea and East Coast patrol that have been made public, though mention should be made of a unique incident which occurred on Aug. 16, when a German submarine shelled Whitehaven, Parton, and Harrington, causing little damage and no casualties. Very little has been published of the arduous and hazardous work of the mine-sweepers, which will make an epic of itself when the full story is told. Thousands of mines have been scattered in the North Sea by the enemy from raiding cruisers, innocent-looking merchantmen, and submarines; and a general idea of the effectiveness of the mine-sweepers' work may be obtained from the fact that in the first 15 months of war we lost in home waters only five warships through their agency—*Amphion*, *Speedy*, D5, *Maori*, and *Lynx*. A number of Distinguished Service Crosses and Distinguished Conduct Medals have been distributed among the skippers and crews of mine-sweeping trawlers.

The Submarine Blockade.

It has been shown that the cruiser campaign against our commerce was snuffed out without achieving any appreciable result. Another failure which the enemy was soon forced to admit was that of the submarine in its expected *rôle*. It was hopeless from the beginning for the enemy to look for victory in a general fleet action, and as the long-cherished idea of a surprise attack on our main squadrons had been frustrated by their timely concentration and disappearance before the outbreak of war, Germany was thrown back upon the submarine as virtually the only weapon available for wearing down our superiority by a campaign of attrition. It began with a certain amount of success; but the errors on our part which led to the sinking of the *Aboukir*, *Hogue*, *Cressy*, *Hawke*, and *Formidable* were quickly remedied, with the result that the submarine declined rapidly as an agent of destruction. This is briefly indicated by the following facts:—In the first five months of the war (down to Jan. 4, 1915) enemy submarines sank eight of our warships in home waters, aggregating 67,700 tons; but in the following ten months, to the end of October, they sank only five of 14,753 tons, the only regular warships being three torpedo-craft of 865 tons all told.

The principal facts in the German naval outlook after a few months of war were, therefore, that their cruisers had failed against our commerce, and that their submarines were being rapidly circumvented in their attacks on our warships. Out of this position there was born the "submarine blockade," designed to find profitable work for the submarines by setting them to the task in which the cruisers had been so completely beaten—the attack on British commerce. There appeared to be reason for believing that the new campaign might be accompanied by very serious results for us. Hostile cruisers on the high seas were fatally handicapped by lack of bases, and even regular trade routes do not necessarily furnish a very full "bag"; but submarines avoided these drawbacks. With the large cruising capacity (*circa* 5,000 miles) possessed by modern boats, they could leave their home ports, maintain themselves for several days in the areas where all shipping routes concentrate—the mouth of the Channel, and the north and south openings of the Irish Sea—and return again to their bases when necessary for replenishing their stores and ammunition and refreshing their crews. The first merchant ship to succumb to submarine attack was the *Glitra*, sunk off the south of Norway on Oct. 20, 1914, and in the following month some were sunk in the Channel, mainly off Havre. In December Admiral von Tirpitz hinted to an American interviewer the possible effectiveness of a "submarine war against British merchant shipping," and the idea was taken up enthusiastically in the German press. On Feb. 4 (*vide Times*, Feb. 9, 1915) the German Government announced its intention to embark on such a war, it being urged in excuse that Great Britain had violated international law by interfering with neutral commerce with Germany. The vital part of the statement is reproduced below: "To its (Germany's) regret it therefore sees itself forced to military measures aimed at England in retaliation against the English procedure. Just as England has designated the area between Scotland and Norway as an area of war, so Germany now declares all the waters surrounding Great Britain and Ireland, including the entire English Channel, as an area of war, thus proceeding against the shipping of the enemy. For this purpose, beginning from Feb. 18, 1915, it will endeavour to destroy every enemy merchant ship that is found in this area of war without it always being possible to avert the peril that this threatens to persons and cargoes. Neutrals are therefore warned against further entrusting crews and passengers and wares to such ships. Their attention is also called to the fact that it is advisable for their ships to avoid entering this area, for even though the German naval forces have instructions to avoid violence to neutral ships in so far as they are recognisable, in view of the misuse of neutral flags ordered by the British Government and the contingencies of naval warfare, their becoming victims of an attack directed against enemy ships cannot always be averted." The British Government, by the way, had issued no such instructions as those to which reference is made. What had happened was that after the *Lusitania* had entered the Mersey under the American flag, Sir Edward Grey had pointed out that this was a legitimate and established *ruse de guerre* for a ship desirous of escaping destruction.

It is quite unnecessary to go in detail through the record of the "submarine blockade," which was nominally still in existence at the time of sending these lines to press. In the last week

of January, 1915, half a dozen merchantmen were sunk, mainly between Anglesey and the Mersey, and this was regarded as but a poor sample of what would happen when the submarines got into their stride. In point of fact, however, subsequent events showed this figure to be rather above the weekly average. The following table shows, for every successive four weeks of the "blockade," the total number of arrivals and sailings of oversea steamers (upwards of 300 tons net) of all nationalities at and from United Kingdom ports, and also the number of British vessels sunk by submarines. There is no official published record of the number of ships sunk under Allied and neutral flags.

Period (4 weeks).	Arrivals and Sailings.	British Ships sunk.
Feb. 18 to Mar. 17	... 5,951	... 19
Mar. 18 ,, Apr. 14	... 5,675	... 16
Apr. 15 ,, May 12	... 5,991	... 15
May 13 ,, June 9	... 5,478	... 20
June 10 ,, July 7	... 5,582	... 25
July 8 ,, Aug. 4	... 5,513	... 12
Aug. 5 ,, Sept. 1	... 5,598	... 35
Sept. 2 ,, ,, 29	... 5,563	... 22
,, 30 ,, Oct. 20	... 4,146	... 13

Since the week ending Oct. 20, when there were 1,279 arrivals and sailings and only one vessel sunk, the figures have not been published, so that only three weeks are covered in the last line above. According to this the number of entrances and clearances averaged 1,382 weekly, whereas in the four weeks from Oct. 1 to Oct. 28, 1914, the average was 1,364 weekly. It is important that this should be noted, because one of the avowed objects of the "blockade" was to prevent the use of British ports by shipping of any nationality whatever—a result it has distinctly failed to achieve.

The prosecution of this campaign was marked, especially in its earlier stages, by some of the blackest deeds that have besmirched the naval history of any nation, ancient, mediæval, or modern. It was obvious, of course, that German submarines could not make prizes except in the near neighbourhood of their own ports (where prizes were hardly likely to be found), and that the campaign would have to proceed, if at all, by destruction and not by capture. That much is admitted; but everything in international law and the customs of war, whether written or unwritten, demanded that due provision should be made for respecting the rights of neutrals and the lives of all non-combatants. We had evidence before the institution of the "blockade" that these laws and customs would not be respected. On Oct. 26, 1914, the French steamer *Amiral Ganteaume* was carrying over 2,000 homeless refugees from Calais to Havre when she was torpedoed in broad daylight and without warning by a German submarine. Fortunately the ship did not sink, and the loss of life was comparatively small, about 40, mostly women and children, being killed. On Feb. 1 a torpedo was fired, also in broad daylight, at the British hospital ship *Asturias*, which was properly and unmistakably painted to indicate her mission. Only the prompt handling of the ship saved her from being struck.

After these incidents, the infamous behaviour of German submarine commanders when attacking merchantmen seems merely normal. In a large proportion of cases—far too many to mention individually—ships and fishing-boats were attacked without the slightest warning, the first intimation of the presence of a hostile submarine being the explosion of the torpedo. By far the most terrible of such cases was that of the Cunard liner *Lusitania*. Before this ship left America on her last voyage it had been openly boasted by Germans there that she would never reach England, and many intending passengers received individual warning. She left to schedule time, however, with 1,257 passengers and a crew of 702, and proceeded at 21 knots as against her normal 25. On the morning of May 7, when off the Irish coast, speed was reduced to 18 knots, in order that the vessel might arrive in the Mersey at a suitable time on the following day, and she was steaming at this rate when, shortly after two o'clock in the afternoon, she was struck on the starboard side by two torpedoes fired in quick succession. Quoting from Lord Mersey's report: "Both these torpedoes were discharged by a German submarine from a distance variously estimated at from two to five hundred yards. No warning of any kind was given. It is also in evidence that shortly afterwards another torpedo from another submarine was fired at the port side of the *Lusitania*. This torpedo did not strike the ship, and the circumstance is only mentioned for the purpose of showing that perhaps more than one submarine was taking part in the attack. The *Lusitania* on being struck took a heavy list to starboard, and in less than twenty minutes she sank in deep water. 1,198 men, women, and children were drowned." The German excuse for sinking the ship was that she was armed; but this was not only denied by the American Customs officers who were responsible for her clearance from New York, but one Gustav Stahl, who swore an affidavit that he saw four guns mounted on board, pleaded guilty to a charge of perjury in New York, and was sentenced to 18 months' imprisonment. Some of the evidence given at the inquiry in England was of a confidential nature. The report of Lord Mersey and the assessors declared that no blame attached either to the master of the liner (Capt. W. T. Turner) or to the owners. The responsibility of Government departments was not investigated.

Of those killed 124 were United States citizens, and the relations between that country and Germany became severely strained in consequence. American opinion had already been outraged by similar, though less catastrophic, incidents and by attacks on American ships. On March 28 the British liner *Falaba*, whose passengers and crew had been warned to get away, was torpedoed while some of the boats were still hanging from the davits or lying alongside. On April 28 the U.S. steamer *Cushing* was hit by a bomb dropped from a German aeroplane; on May 1 the *Gulflight* (U.S.) was torpedoed off the Scillies and two of the crew killed; and the *Leelanaw* (also U.S.) was sunk off the Orkneys on July 25. These and other incidents led to strong protests being sent to Berlin by the U.S. Government, but with no apparent effect until the case of the *Arabic* arose. This vessel was torpedoed without warning off the south of Ireland on Aug. 19, 1915, and sank in 11 minutes, 33 of those on board, including American subjects, being drowned. The German Government raised the excuse that the *Arabic* had tried to ram the submarine which sank her; but in response to American

representations a promise was extracted that in future no "liners" should be attacked unless their passengers and crews had been allowed to get into "a place of safety." At the moment of writing, there has been no satisfactory definition of the words within inverted commas. The value of the promise was demonstrated on Nov. 14, when two enemy submarines shelled and torpedoed the outward-bound Italian liner *Ancona* off Sardinia, sinking her, with a loss of 194 lives. The attack seems to have been entirely unprovoked, the captain of the liner asserting that he stopped his vessel immediately he recognised the hostile craft. A number of American subjects were among the killed.

Several cases have arisen in which the illegality of German attack on merchantmen was at least questionable. Among such cases were those of vessels carrying Government stores, others where vessels were called upon to stop but endeavoured to escape, and, as in the case of the *Hesperian* (the only known instance), torpedoed on Sept. 16, 1915, where a gun or guns had been mounted "for the purpose of self-defence."

The War against Submarines.

It goes without saying that the war against submarines has been prosecuted with vigour, but there is no real evidence as to the extent of its success beyond the poor results which enemy vessels have achieved in spite of the energy believed to have been put into their construction. An Admiralty statement of Aug. 26, 1915, referred to German submarine losses as having been "important," and Mr. Balfour, in a letter dated Sept. 5, said they had been "formidable." American sources laying claim to reliable information figured them as between 50 and 60 at the beginning of October; to which a German "semi-official" authority replied that they had not exceeded one-fourth of the higher figure. There is clearly no satisfaction to be obtained from an attempt to estimate the actual number, which cannot be known to our own naval authorities unless our secret service arrangements have reached an almost impossible pitch of perfection. They can only be certain of vessels captured and of those definitely located by means of wreckage in one form or another. They can know little or nothing of vessels accidentally lost through, for example, being sent to sea with imperfectly trained crews, or of those that have been destroyed through striking mines. In many cases where a submarine is known to have been damaged by gun-fire or ramming, and has disappeared beneath the surface, a doubt must necessarily exist as to whether the disappearance was voluntary or otherwise, and this cannot always be cleared up by sending down divers to investigate.

The most recent estimates of enemy losses that have been allowed to appear in this country are the following:—On Sept. 22, 1915, Mr. Hogge said in Parliament: "Since the outbreak of war we have sunk 50 German submarines. Everybody knows this. I have mentioned it in speeches, yet the Press is not allowed to publish it." On Oct. 4 American papers, purporting to share the knowledge of the U.S. Navy Department, declared that "between 60 and 70" had been accounted for; while the Rome correspondent of a Paris paper reported on Oct. 20 that Germany "admits that 27 submarines have been caught in English nets, and that 16 others were destroyed before the adoption of the net system." One is inclined to regard the highest of these figures as being nearest the truth. Shortly before the outbreak of the war Germany was known to have 50 submarines complete or in hand, and she is believed now to possess not more than a dozen vessels capable of high-sea service. Lord Selborne, however, suggested in July that in all probability German shipbuilding yards were concentrating on submarines to the exclusion of all other types; and while the absence of any great activity at sea may be held to prove the small number available, it is within the bounds of possibility that large flotillas are being built and trained for some big movement.

The principal means employed by the Navy for fighting submarines are nets, fixed and other, and exceedingly fast motor-boats armed with a heavy steel ram and one or two 3-inch quick-firing guns forward and aft. In favourable weather it has been found possible to follow the track of a submerged submarine by means of a characteristic disturbance of the surface, and this has been put to good use by destroyers and other vessels on the patrol service. Nets have been very effective, not only in trapping submarines, but in protecting certain areas against their intrusion. For instance, many months have elapsed since an enemy vessel was reported in the Channel. The submarines whose loss has been actually announced by the Admiralty are as follows:—

U 15 Rammed by H.M.S. *Birmingham*, Aug. 9, 1914.
*U ? Rammed by H.M.S. *Badger*, Oct. 24, 1914.
U 18 Sunk off N. of Scotland, Nov. 23, 1914.
*U ? Rammed by S.S. *Thordis*, Feb. 28, 1915.
U 8 Sunk by destroyers in the Forth, Mar. 4, 1915.
U 12 Rammed by H.M.S. *Ariel*, Mar. 10, 1915.
U 29 Rammed by a British warship. Report issued Mar. 25, 1915.
U 14 Destruction of vessel announced, June 9, 1915.
U ? Rammed by S.S. *Cottingham*, destruction completed by patrol boats, July, 1915.
U 27 Official German report—this vessel last heard of, Aug. 10, 1915.
*U ? Bombed and sunk by aeroplane off Ostend, Aug. 26, 1915.

An asterisk indicates that the German authorities issued a denial of the British claim. U 29 had on board Commander Otto Weddigen, who was in command of the U 9 when that vessel sank the *Hogue*, *Aboukir*, and *Cressy*. In addition to the above, a large number of French and some Russian claims have been made, but in no single instance has the number of the German boat been given.

Operations in the Baltic.

Down to the summer of 1915 naval events in the Baltic were of the usual spasmodic character, and the Germans lost several torpedo-craft in their operations against Libau and Windau, either through mines or hostile submarines. The armored cruiser *Friedrich Carl* (8,856 tons) was authoritatively reported to have been mined

and sunk in November, 1914, and on Jan. 25 the light cruiser *Gazelle* (2,558 tons) was torpedoed by a submarine in the southern part of the sea and, it is believed, totally disabled. A number of British submarines had made their way into the Baltic in the autumn of 1914, and the *Gazelle* is understood to have been their first victim. The Germans occupied Libau on May 8, and thereafter directed their efforts towards securing the sea control of the coast at least as far as the northern shores of the Gulf of Riga. On June 6 the Russian mine-layer *Yenesei* (2,926 tons) was torpedoed and sunk by a submarine; but less than a month later this loss was amply offset. On July 2 an action was fought between squadrons of Russian and German cruisers off the island of Gothland, with the result that the German mine-laying cruiser *Albatross* (1,970 tons) was driven ashore and destroyed, a torpedo-boat being also reported sunk. The Russians sustained no loss. On the same day a British submarine under the orders of Commander Max Horton torpedoed and sank the German battle-ship *Pommern* (13,040 tons) off Danzig Bay, this being the heaviest single-ship loss, apart from the *Blücher*, thus far sustained by the enemy. In August the German Fleet made a determined effort to secure the control of the Gulf of Riga. It is impossible yet to arrive at the details of the fighting or even of the losses, since the Russian official reports are in many places contradictory, and in most are flatly denied by the Germans. There is no doubt, however, that the fighting between Aug. 16 and 21 was severe, if intermittent, or that the expedition ended in a dead failure for the enemy. The Russians admit the loss of the gunboat *Sivoutch* (875 tons), while the Germans claim to have destroyed also a sister ship (*Koreitz*) and a large destroyer. The official Russian report states that two cruisers and at least eight torpedo vessels belonging to the enemy were either sunk or put out of action; but the Germans confess only to two torpedo-boats—one mined and one stranded. The battle-cruiser *Moltke*, while patrolling outside the Gulf, was torpedoed by a British submarine under Commander Noel Laurence, but the first official Russian statement that the vessel was sunk turned out to be an exaggeration.

On Aug. 19 the British submarine *E* 13, Lieut.-Commander Geoffrey Layton, ran aground on the Danish island of Saltholm in attempting to enter the Baltic, and, while thus lying in neutral territorial waters, was made the object of a dastardly attack by German torpedo-boats. While three small Danish warships were lying close to the submarine two German vessels approached, and one of them, hoisting a signal, discharged a torpedo at the submarine from a distance of 300 yards before there was time to read the flags. The German boat then opened fire with her guns; and when, the submarine being now on fire fore and aft, the commander ordered the crew to abandon her, the Germans fired on them with machine-guns and shrapnel until the Danish vessels were able to interpose themselves for the defence of the helpless men. Fifteen men were killed in this attack, which ranks among the foullest of German war atrocities.

After their failure at Riga the Germans withdrew to their own waters, having failed to secure the command of the sea against a vastly inferior enemy. In October British and Russian submarines began to apply the principles of the "submarine blockade" to German shipping in the southern waters of the Baltic, and with such effect that some 28 enemy steamers, trading between Swedish and German ports, were sunk between the 11th and the end of the month. Evidently the moral of the German merchant service and mercantile community was unable to stand the strain of this sort of thing, for the latest information to hand at the moment of writing is that all the affected traffic has been suspended. These submarine operations have had an important effect on the military situation on the north-eastern front, making it impossible for the Germans to supply their armies by sea, and compelling them to depend upon the very inadequate railroad facilities. The hostile advance on Riga has thus been severely checked, if not altogether defeated.

A further important material success was scored by one of our submarine on Oct. 23, when the armoured cruiser *Prinz Adalbert* was torpedoed and sunk off Libau, only a very few being saved out of a nominal crew of 557. The cruiser *Undine* was sunk by a British submarine on Nov. 7, while engaged on escort duties. Omitting torpedo-craft, as to which details are unreliable, and assuming that no German cruisers were lost at Riga in August (which is improbable), the Russian and German losses in the Baltic down to Nov. 10, 1915, were as follows:—

Russian: *Pallada* (armoured cruiser), *Yenesei* (mine-layer), and *Sivoutch* (gunboat). Total tons, 11,576.

German: *Pommern* (battleship), *Friedrich Carl* and *Prinz Adalbert* (armoured cruisers), *Magdeburg*, *Undine*, and *Gazelle* (light cruisers), and *Albatross* (mine-layer). Total tons, 42,416.

The Mediterranean.

Apart from the operations connected with the attack on the Dardanelles and the Gallipoli Peninsula, comparatively little of naval importance has occurred in the Mediterranean since the escape of the *Goeben* and *Breslau* from Messina in August, 1914. Until the entry of Italy into the war the task of containing the Austrian Fleet fell upon the French Navy, under Adm. Boué de Lapeyrère, who, owing to ill-health, was succeeded in October by Vice-Adm. Dartige du Fournet. No Austrian forces other than submarines were encountered after August, 1914, but several underwater attacks were made on the patrolling squadrons. The battleship *Jean Bart* was struck by a torpedo in December, but without suffering serious damage; but on the night of April 26 the armoured cruiser *Léon Gambetta* (11,959 tons) was sunk in the Straits of Otranto. Our allies also lost the destroyer *Dague* (mined), and the submarine *Curie*, captured while endeavouring to get into Pola.

Italy declared war on Austria on May 23, and shortly afterwards took over from France the responsibility for looking after the Austrian Fleet, the Commander-in-Chief being the Duke of the Abruzzi. For a few days there was a good deal of flotilla activity between Pola on the one hand and Brindisi and Venice on the other, resulting in the loss of the Italian destroyer *Turbine* and damage to Austrian cruisers and torpedo-craft. Subsequently, however, matters settled down to the position usual when unequal fleets are matched, the Italian Fleet maintaining the command of the Adriatic and running the risks to which a

patrolling force in such conditions is always exposed. On June 18 the submarine *Medusa* was torpedoed and sunk by an Austrian submarine—an incident remarkable as being the first on record of any encounter between underwater craft. Another notable occurrence in which an Italian submarine figured was the experience of the *Nereide*, which, officially reported as lost on Aug. 15, arrived in port after having lain at the bottom with disabled engines and in complete darkness for 70 hours. July was a particularly costly month for the Italian Navy, the armoured cruiser *Amalfi* (10,234 tons) being torpedoed and sunk while on patrol duty on the 8th, and the *Garibaldi* (7,234 tons) ten days later. In the following month the Austrian submarines U 3 and U 12 were sunk in the Adriatic, the former by a French destroyer; and on Sept. 27 the Italian battleship *Benedetto Brin* caught fire and was sunk in Brindisi Harbour with a proportion of her crew. Reckoning by the proportion of losses inflicted to losses sustained, the Austrian Fleet has so far been the most successful of all engaged in the war, its Adriatic record being the loss of the *Zenta* (2,263 tons), against the sinking of three French and Italian warships of 29,427 tons. Torpedo-craft are not included in these figures.

THE DARDANELLES.

Although there are many phases of the war that offer ample ground for criticism of the British Government, the essence of all incapacity and lack of foresight seems to have been concentrated in the eastern Mediterranean. The dismal story has three sides—political, naval, and military—and all are interdependent; but it is the naval side alone with which we are at present concerned. The trouble with Turkey began when the British Government took over the battleship *Osman I.*, building on the Tyne (now H.M.S. *Agincourt*), Turkey regarding this as an unfriendly act. Unfortunately, this was followed within a week by the arrival of the *Goeben* and *Breslau* in the Dardanelles; upon which the Turkish Government "bought" the two ships to fill the gap in their defences caused by the retention here of the *Osman I.* The escape of these ships from Messina was perhaps the main factor in deciding the attitude of Turkey. The German officers and men remained, ostensibly because there was no trained *personnel* in Turkey capable of handling the ships; but before August was out it was clear that the control of the Ottoman naval and military forces was passing rapidly into German hands, and active preparations were discovered for barricading the Dardanelles by means of mine-fields, for carrying on warlike operations in Asia Minor and Persia, and for fomenting trouble in Egypt and India. Many open acts of war were committed, culminating in a raid on Odessa on Oct. 29, 1914, by two or three Turkish torpedo-boats. On the following day the Russian, French, and British Ambassadors at Constantinople applied for their passports.

Operations were begun by a brief bombardment of the forts at the entrance to the Dardanelles on Nov. 3 by a combined British and French squadron, and various ports on the Syrian coast were also shelled. Then followed a period of quiet, to be broken on December 11 by a most daring piece of work on the part of submarine B 11 (Lieut. N. D. Holbrook), which, fighting against the swift current that runs through the Straits and successfully negotiating five rows of mines, torpedoed and sank the Turkish battleship *Messoudieh* at her moorings. This was the first of a great series of successes our submarines were to gain in these waters, and Lieut. Holbrook was deservedly awarded the V.C. The French submarine *Saphir*, which attempted to get through in January, was disabled through striking the bottom, and, rising to the surface, was sunk by her crew to prevent her falling into the hands of the Turks. The naval bombardment was renewed on Feb. 19, assisted by aerial scouts from the seaplane mother ship *Ark Royal;* and on the 24th the *Queen Elizabeth* was in action for the first time, her 15-inch shells kicking up plenty of dust, whatever may have been their effect on the forts against which they were directed. Considerable success was achieved, however, and demolition parties were put ashore to complete the work of the guns against four forts that were silenced. Mine-sweepers were then got to work inside the Straits, the warships following close behind them; and it rather seemed that the forcing of the passage was going to be a fairly simple affair.

March 18, however, brought a sad disillusionment. Two days before, Vice-Admiral S. H. Carden, who had been incapacitated by illness, was succeeded in command of the Anglo-French fleet by Vice-Admiral J. M. de Robeck; and the latter, in pursuance of instructions from home, at once organised a violent assault with the apparent object of forcing a way through at once. There is still some doubt as to the origin of Admiral de Robeck's instructions. It was at first stated and accepted that Lord Fisher, First Sea Lord, expressed strong disapproval to Mr. Churchill, and that the latter failed to communicate the Admiral's views to the Cabinet when the question was under discussion. On Nov. 2, however, Mr. Asquith declared that the attack was ordered "notwithstanding some doubts and hesitations" present in the mind of Lord Fisher; so that the Government, it would appear, decided on the assault against the known opinions of their principal naval adviser. It was duly begun at 10.45 a.m. on Mar. 18. In the early afternoon the French battleship *Bouvet* (11,843 tons) was struck by a mine and sank in three minutes, with the great bulk of her crew; at four o'clock the British battleship *Irresistible* (15,000 tons) was similarly damaged, followed two hours later by the *Ocean* (12,950 tons). Both vessels sank after the majority of their crews had been safely taken off. Several other ships were damaged, including the French battleships *Gaulois* and *Suffren*, and the British battle-cruiser *Inflexible*, which narrowly escaped total destruction. The damage to the forts was described as trifling in the official Turkish and German reports.

The *communiqué* of the British Admiralty dealing with this attack ended with the assertion that the operations were continuing, "ample naval and military forces being available on the spot." This was a mis-statement; and it was not until April 25 that the attack was renewed with any vigour and the first bodies of troops established ashore. The story of the landing cannot be told in any detail. It was covered by a powerful naval force, and from end to end is a record of unexampled heroism and terrible loss of life. The enemy had had many months' warning of our intentions, and had prepared

accordingly; the few available landing places being dominated by guns and entrenchments, and rendered still more difficult of access by barbed wire entanglements having been laid for some distance out to sea for the purpose of impeding boats and holding up the men as they attempted to wade ashore. The story of the *River Clyde* is an epic of gallantry in itself. The transport was run ashore, the intention being to form a bridge of lighters between her and the beach, over which the troops could land; but first of all the bridge failed properly to cover the distance, and several heroic attempts to complete it were frustrated by the murderous fire kept up by the enemy. At last, however, it was successfully accomplished, and the nature of the task is evidenced by the fact that no fewer than five Victoria Crosses were awarded in connexion with this incident alone.

The work of the Navy on this occasion, and, indeed, throughout the whole of the combined operations at the Dardanelles, was aptly summed up by Sir Ian Hamilton in the phrase that it had been "both father and mother to the Army." No ships were lost during the first landing; but on the night of May 12, while the battleship *Goliath* was in the Straits supporting the right flank of the French forces, she was attacked and sunk by the Turkish destroyer *Mauvenet-i-Millet*, about 500 lives being lost. At this time the presence of hostile submarines was reported in the eastern Mediterranean, and very soon these vessels began seriously to interfere with the operations. At the first hint of them the whole system of transporting troops from Lemnos to Gallipoli had to be recast, while some of the more modern warships, including the *Queen Elizabeth*, were sent home; but on May 25 the battleship *Triumph* (11,985 tons) was torpedoed and sunk, and, two days later, the *Majestic* (14,900 tons). Far more serious from the point of view of the loss of life involved was the sinking of the transport *Royal Edward* on Aug. 14, with the loss of about 1,000 men. This was the first instance of a successful attack on a troopship since the beginning of the war, though another—the *Ramazan*—was sunk off the south of Greece by gunfire from an enemy submarine, and a third—the *Marquette*—by a torpedo in October, the loss of life in these cases being about 300 and 100 respectively. In November further submarine attacks on transports in the Mediterranean were announced, the *Southland* having been torpedoed on Sept. 2, but not sunk (31 lives lost), and the *Mercian* shelled (date unspecified), with 53 killed. The almost perfect measures of protection adopted for cross-Channel traffic are unfortunately impossible in the wide waters of the Mediterranean. A Turkish torpedo-boat had attacked the transport *Manitou* on April 17, but her torpedoes missed their mark, though 51 men were drowned through the capsizing of boats.

The work of our own submarines in this region has been particularly brilliant, especially when the initial difficulties, natural and other, of getting through the Dardanelles Straits are realised. On May 22 it was announced that Lieut.-Commr. E. C. Boyle (E 14) had been awarded the V.C. for entering the Sea of Marmora on April 27, and, in spite of great navigational difficulties and hostile patrols, sinking two Turkish gunboats and a large military transport. On June 26 Lieut.-Commr. M. E. Nasmith (E 11) was awarded the V.C. for destroying a gunboat, three transports, one ammunition ship, and three store ships, besides driving a fourth storeship ashore. On Aug. 8 the Turkish battleship *Kheyr-ed-din Barbarosse* (9,900 tons) was sunk by a British submarine whose identity has not yet been announced; and a similar reticence has been preserved regarding the vessels responsible for much havoc, besides that recorded, among Turkish shipping in the Sea of Marmora. Down to Oct. 26, 1915, our submarines had sunk or damaged a total of 2 battleships, 5 gunboats, a torpedo-boat, 8 transports, and 197 supply ships.

This work has not been carried out without loss. The E 15 grounded on Kephez Point on April 15, under the fire of hostile batteries, and had to be abandoned by those of her crew who survived. It was determined that the boat should not fall into the hands of the Turks, and on the night of the 18th two picket-boats went up the Straits, and, in spite of heavy fire, succeeded in destroying her by means of a torpedo. Lieut.-Commr. E. G. Robinson, who was in charge, was specially promoted for this service. The Australian submarine AE 2 was lost on April 30, her crew being taken prisoners; the French lost the *Joule* (mined) on May 1, the *Mariotte* (believed to have been in action with a German submarine) on July 26, and the *Turquoise* at the end of October; and our E 7 was destroyed early in September.

The Russian Fleet had little difficulty in commanding the Black Sea, where, from time to time, large numbers of small Turkish vessels have been destroyed. Considerable interest has centred in the doings of the *Goeben*, which, if printed report could be trusted, has been sunk several times, dismantled, and converted into a hospital ship. She was, however, reported to be cruising in the Black Sea as recently as October.

The Naval Air Service.

Although an extremely youthful organisation, the R.N. Air Service has done remarkably good work in the war. Sections have been detailed to accompany the Expeditionary Forces to France and the Dardanelles; some are in company with the Main Fleet in special seaplane-carrying ships; while others are distributed along the coast and inland for defence against aerial incursions. Successful aerial attacks, starting from land bases, have been made upon Zeppelin sheds at Dusseldorf (Sept. 22, 1915), Friedrichshaven (Nov. 21, 1914), and Evere (June 7, 1915), airships and factories being damaged or destroyed on each occasion. Frequent raids have also been made upon Belgian ports in German occupation, and which are being used for the construction of submarines and torpedo-craft. On Feb. 4, 1915, 34 aeroplanes bombarded Bruges, Zeebrugge, Blankenberghe, and Ostend; and four days later 48 machines carried out a similar expedition, eight of them being French. Several other such expeditions have been undertaken, and most of them have resulted in serious damage both to shipyards and to the vessels building or berthed in them. Only one attack has been made from the sea. This was on Dec. 25, 1914, when special "carriers" steamed with seven seaplanes to the vicinity of Heligoland and launched the aircraft against German warships lying off Cuxhaven. The extent of the damage inflicted is unknown; but the incident is noteworthy in many ways. The cruisers and destroyers convoying the aircraft were attacked by submarines and Zeppelins,

the former being unsuccessful and the latter easily driven off. Hostile seaplanes also attacked, but were equally unsuccessful. Three of our seaplanes and their pilots were picked up on their return by the cruisers; three other pilots were taken on board submarines after sinking their seaplanes; and the seventh, owing to engine trouble, had to descend before reaching our ships, but was picked up by a Dutch trawler.

The honour of being the first to destroy a Zeppelin in flight was worthily won by a British naval airman, and was thus described by the Admiralty:—"June 7, 1915.—At 3 o'clock this morning Flight-Sub-Lieut. R. A. J. Warneford attacked a Zeppelin in the air between Ghent and Brussels at 6,000 feet. He dropped six bombs, and the airship exploded, fell to the ground, and burnt for a considerable time. The force of the explosion caused the Morane monoplane to turn upside down. The pilot succeeded in righting the machine, but had to make a forced landing in the enemy's country; however, he was able to restart his engine, and returned safely to the aerodrome." Lieut. Warneford received a telegram from the King, in which His Majesty conferred the V.C. upon him, but the gallant pilot was unfortunately killed a few days later while testing a new machine in Paris. Reference has already been made to the sinking of a German submarine on Aug. 26 by bombs dropped from an aeroplane. The pilot on this occasion was Squadron-Commander A. W. Bigsworth. On Aug. 12, 1915, Flight-Commander C. H. K. Edmonds bombed and sank a Turkish transport in the Dardanelles.

The foregoing incidents must be regarded as typifying the offensive work of the Naval Air Service. It is unfortunate that it has not been correspondingly successful in defence. More than a score of air raids, conducted for the most part by Zeppelins or other dirigible airships, have been made on England, and several upon London and its environs, considerable loss of life and damage to property being caused. The Censorship is especially severe where air raids are concerned; but it can at least be said that the difficulties in the way of bringing down airships at night are very great indeed, and have always been so regarded by those having any real acquaintance with the problems of aerial warfare. The aerial defence of London has been in the hands of the Navy since the beginning of the war, and consists of coastal and inland seaplane and aeroplane stations, motors armed with anti-aircraft guns, and searchlights and guns around and within the metropolis itself. Rear-Admiral C. L. Vaughan-Lee was appointed Director of Air Services (succeeding Commodore M. F. Sueter, who had been Director of the Air Department and was now appointed Superintendent of Aircraft Construction); while Admiral Sir Percy Scott was given charge of the anti-aircraft guns of the capital. The new arrangements have not yet been tested; nor, indeed, has there been time for many new arrangements to be made.

Incidental Work of the Fleet.

Much of the active work of the Navy in the first fifteen months of war has taken the form of giving assistance to military operations. This phase of fleet service is represented by the shepherding of our armies landed at the Dardanelles and Salonika; by the incessant bombardment of the Turkish positions in Gallipoli, and the frequent shelling of the German lines and bases on the Belgian coast. These operations have led to the revival of a type of warship that came into existence with the American Civil War and, in various forms, remained a naval fashion until near the end of last century. This is the "monitor," a vessel characterised in the main by a shallow draught and heavy armament, allowing it to work close up to the coast-line and to inflict the greatest possible amount of damage when it gets there. The Navy had none of these vessels when the war started; but three small river-service craft building here for Brazil were taken over, and since then monitors of various types have been added to the Fleet at a rapid rate, their armaments varying from the largest guns yet in naval use down to the 6-inch quick-firer. In these vessels speed is an unimportant factor, and the space saved in engine-power has been devoted to increasing their protection against torpedo attack. The plan generally followed is to build an external hull several feet away from the hull proper, and to fill the intervening space with some shock-absorbing material whose nature cannot be specified. The Censorship has allowed these vessels to be described as "torpedo-proof," but it would be premature to accept that description until they have been tested by torpedo attack. Monitors have already done exceedingly good work at the Dardanelles, on the east coast of Africa, and on the Bulgarian and Belgian coasts, and there are other tasks that may be found for them before the war is over.

There is also much that still has to be told of the already months-old service rendered by naval officers and men in various theatres of war—in West and Central Africa; on the Tigris and Euphrates; and in Serbia, where a British naval brigade did much to hold the Danube against the common enemy. Lieut.-Commr. C. L. Kerr has been awarded the D.S.O. for his services against Austrian monitors on the Danube, and the work of the Navy in that region was of sufficient importance to demand the presence of Rear-Admiral E. C. T. Troubridge for its direction.

A tremendous amount of work has naturally fallen upon the Admiralty Transport Department, where Mr. Graeme Thomson succeeded Rear-Admiral H. W. Savory as Director in December, 1914. In his speech of Nov. 2, 1915, Mr. Asquith gave the following *résumé* of its work:—"Since the war began the Transport Department, for the Army alone, have carried 2,500,000 officers and men, and 320,000 sick and wounded and nurses. They have carried, further, 2,500,000 tons of stores and munitions, and 800,000 horses, mules, and camels. . . . These figures are exclusive of millions of tons of stores, mainly coal and oil, which have been carried by the Navy for Allied Governments." These stupendous operations involved the appropriation of a large proportion of the mercantile marine; and the complaints of the interests concerned that the best use was not being made of the tonnage became so insistent that in November it was decided to secure the further co-operation of practical shipping men. Down to the end of the fifteenth month of the war the loss of life incurred in the transport service was less than one in a thousand of those carried, the only

vessels sunk—all in the eastern Mediterranean—being the *Royal Edward*, *Marquette*, and *Ramazan*. Only five lives are known to have been lost on transports in home waters, this being when the *Wayfarer* was torpedoed (but not sunk) in April, 1915.

The Prospect at Sea.

The main interest of the naval situation naturally centres in the question as to whether, and if so, when, the German Fleet will "come out" and directly challenge our own main squadrons for the command of the sea. It is, of course, quite impossible to answer such a question with anything approaching authority, but there are certain facts available which have an important bearing upon it. At the outbreak of war the combined strength of the allied European Powers in completed ships of the Dreadnought type was 38, as against a German-Austrian total of 24. The number of vessels under construction, however, was no less than 40 in the case of Great Britain, France, Russia, and Italy, while Germany and Austria together mustered only six vessels in hand. It will therefore be seen that by the time the vessels building at the beginning of the war are completed, the superiority of the Allies will have increased from 38 ships against 24 to 78 ships against 30, the proportionate advantage rising from 16 : 10 to 26 : 10. It is thus reasonable to assume that, if the enemy's fleet did not think it advisable to "come out" against the original odds, it is not likely to do so after they have been very nearly doubled. Without at any time believing in the power of their fleet to meet and beat the British in a stand-up fight, the enemy trusted largely in the ability of their destroyer flotillas to diminish our superiority, or even to wipe it out altogether, by means of a sudden attack made coincidentally with or prior to the declaration of war. This was frustrated by the disappearance of the main battle squadrons of the British Fleet six days before the actual outbreak of war; and the enemy then, with much apparent confidence, transferred his faith to the "war of attrition." It is impossible to arrive at a reasonably correct idea of the progress which this campaign has made, because the addition of fighting power has been many times greater than its depletion. We have, for instance, lost seven pre-Dreadnought battleships, while Germany has lost only one; but between the outbreak of war and the end of 1915 we should have added 13 Dreadnoughts to our fleet in commission (11 of them armed with 15-in. guns), against a German addition of three, two carrying weapons of this calibre.

The British Fleet, besides being reinforced by an enormous number of ships taken from the mercantile marine, has been strengthened by many scores of vessels built to meet the special needs of the war. Only two types of these craft have been mentioned to the public—monitors of three grades, armed respectively with 6-in., 9·2-in., and 14-in. guns, and fast motor boats for the hunting of submarines. There are other types whose characteristics will presumably be allowed to filter through slowly to the public, while our torpedo flotillas have been augmented at a really phenomenal rate. Many submarines, too, have been put together in Canadian yards and sent across the Atlantic to reinforce our flotillas in European waters.

What is going on behind the veil that shields the German shipyards from view we do not know. It is obvious that the enemy has nothing to gain, save perhaps from the *post-bellum* point of view, by building Dreadnoughts, since nothing he can do can appreciably affect the huge balance against him. In all probability her shipyards are concentrating upon mosquito craft—torpedo-boats, destroyers, and submarines; but even so, the first fifteen months of the war contain nothing to suggest that these will be able to exercise anything approaching a vital influence on its ultimate decision. In such an area as that to which our main fleets are necessarily confined, opportunities for successful work on the part of hostile submarines and swift-moving torpedo-craft are bound to occur frequently, and to be taken advantage of occasionally; but it seems safe to believe that, in spite of dangers that must always exist, the British Navy has now every possible development well prepared for, and that its supremacy will remain unchallengeable, and possibly unchallenged, save by small craft, down to the end of the war. The alternative confronting Germany is either to let us command the seas while her fleet lies safe in its harbours, or let us go on commanding them after her fleet has been destroyed.

Germany's Ambitions.

On several occasions German publicists and prominent business men have given to the world the apparently authenticated aims of German naval policy. It seems not to be essential to the enemy's ambitions that he should command the sea. The Kaiser's famous dictum, "The trident must be in our fist," is no longer representative. Herr von Jagow has declared that all Germany wants is the "freedom of the seas." He hopes that the day is not far distant when only peaceful trading ships shall be allowed to plough their waters, and when nothing shall be allowed to interfere with them. It is scarcely necessary to point out the disingenuousness of this attitude. Germany has found, in war as in peace, that she is handicapped by not being able to dominate the seas, and it is therefore naively suggested on her behalf that the possibility of naval dominance should be removed altogether. The demand for the "freedom of the seas" is a demand for the abolition of navies and for the removal of the principal obstacle which stands between Germany and world dominion. No more ludicrous suggestion could well be made, and it is to be regretted that the British Government has expressed its willingness to discuss the matter after the war. If in this war the seas had been unrestrictedly free to all nations the conflict would have been decided against us long ago.

The views of Herr Ballin, head of the Hamburg-America Line, and a personal friend of the Kaiser, are quite as startling in their way. Addressing a meeting of Hamburg shippers in October, 1915, he demanded for Germany not only the freedom of the seas, but also "naval bases at the entrance and at the exit of the (English) Channel, and strong bases overseas." He did not specify on which side of the Channel he wanted his bases, though he would probably be as well satisfied with Plymouth as with Cherbourg, or with Dover as with Calais. When a man of the status of Herr Ballin talks in this way, however, no room is left for doubt as to the aggressive naval aims with which Germany entered on the war. Unquestionably Germany

is severely handicapped by having all her ports in a bay that is so excellently shadowed by the British Isles; it is equally unquestionably the vital interest of the British people to see that the war, so far as the sea affair is concerned, ends where it began, with the open German coast confined between the Ems and the island of Sylt, and with the freedom of the seas remaining the perquisite of the nation having the strength to command them.

THE UNITED STATES NAVY.

THE United States, as the only neutral naval Power of importance, is the only one whose progress during the past year is either interesting or available for record. The events of the war, and in particular the constantly recurring diplomatic disputes with Germany, have led to a noteworthy revival of interest in national defence, the principal result of which is to be seen in the programme which Mr. Josephus Daniels, Secretary of the Navy, proposes to recommend to Congress. This programme covers the laying down of the following ships between 1917 and 1921:—

Battleships: 2 each year.
Battle-Cruisers: 2 in 1917 and 1920; 1 in 1919 and 1921; none in 1918.
Scout Cruisers: 3 in 1917; 1 in 1918; 2 in 1919, 1920, and 1921.
Destroyers: 15 in 1917; 10 in 1918, 1920, and 1921; 5 in 1919.
Fleet Submarines: 5 in 1917; 4 in 1918; 2 in 1919, 1920, and 1921.
Coast Submarines: 25 in 1917; 15 in 1918, 1919, 1920, and 1921.
Gunboats: 2 in 1917; 1 in 1918; none in other years.
Hospital Ship: 1 in 1917.
Ammunition Ships: 1 in 1920 and 1921.
Fuel Oil Ships: 1 in 1918; 1 in 1920.
Repair Ship: 1 in 1921.

It should be noted that 1917 in the above list means the fiscal year ending on June 30, 1917, and so on. The programme outlined represents an estimated outlay of about £85,000,000 down to 1921, while the adoption of Mr. Daniels' scheme would entail an expenditure for all naval purposes of more than £43,000,000 sterling in the year ending June 30, 1917, which is an increase of £13,000,000 over the present year and only £8,000,000 short of the British vote in 1914-15. It is proposed that the battle-cruisers shall be "nearly 800 feet long" (the British *Lion* is 660 feet), and that they shall have a minimum speed of 35 knots, as compared with the *Lion*'s designed 28. The scout cruisers will be designed for only 25 knots (as compared with the 30 of the British *Arethusa* class), "endurance rather than excessive speed being the object sought." The average cost of the battle-cruisers is set down at 17,500,000 dollars (about £3,500,000 sterling, as compared with the *Lion*'s £2,000,000), and of the scout cruisers at 5,000,000 dollars, or about three times the cost of the *Arethusa*. It is proposed to increase the *personnel* by 11,500 men.

During the past year there have been passed into service the battleships *Nevada* and *Oklahoma*, which, like their immediate predecessors, the *New York* and *Texas*, are armed with ten 14-inch guns. In the later ships, however, the forward and after turrets mount three guns apiece, so that the ten are accommodated in four turrets instead of five. They are also fitted to burn oil fuel exclusively, having storage capacity for about 600,000 gallons. The later battleships in hand will all carry twelve 14-inch guns in four triple turrets. Their names and degree of completion on October 1, 1915, are shown below:—

Pennsylvania .....88·2 per cent.
Arizona.....71·7 ,, ,,
Idaho.....41·6 ,, ,,
Mississippi .....30·4 ,, ,,
California .....(Laid down Oct. 14, 1915).

The two battleships authorised in March, 1915, have not been ordered at the moment of writing. They will be similar to the above, carrying the same armament on a displacement of about 32,000 tons, and having a length of 600 feet. They are known for the present as No. 43 and No. 44. The six destroyers authorised at the same time have been named *Sampson*, *Rowan*, *Davis*, *Allen*, *Wilkes*, and *Shaw*. They will be 315½ feet in length, with a displacement of 1,125 tons and a nominal speed of 30 knots (oil fuel only), and will carry four 4-in. and two anti-aircraft guns, and four triple torpedo-tubes—that is, twelve tubes in all. This is a phenomenal torpedo armament. No British destroyer laid down before the war had more than four tubes. Contracts for these boats were placed on Oct. 18, 1915, as also were those for sixteen coast submarines. These average 500 tons submerged displacement, with speeds of 14 knots on the surface and 11 under water, accommodation for 20 men, and a cruising capacity of 30 days. The immediate objective of American naval policy is to ensure that after the war the United States Fleet shall be second only to the British. Omitting Great Britain and Germany, and also ignoring the new American programme, the number of Dreadnoughts built, building, and immediately projected by the principal naval Powers is as follows:—United States, 17; France, 16; Italy, 10; Russia, 11; Japan, 14. There is, therefore, still the prospect of a close struggle for second place—or third, if the German Fleet should survive the war.

JAPAN.—Little is known of the progress of the Japanese Navy, but the following facts are available:—The battle-cruisers *Hiyei*, *Haruna*, and *Kirishima* have been passed into commission; they are sister ships to the British-built *Kongo*, carrying eight 14-in. and sixteen 6-in. guns on a displacement of 27,500 tons, with a nominal speed of 27 knots. The battleships under construction are the *Fuso*, launched in Feb., 1914, and believed to be completed; the *Yamashiro*, launched in Nov., 1915; and the *Ise* and *Hyuga*, laid down in May, 1915. It is believed that all are of the same type as the *Fuso*, which carries twelve 14-in. and sixteen 6-in. guns on a displacement of 30,600 tons. The estimates for 1915 also provide for laying down four destroyers of 1,000 tons (two to be built in England), four smaller destroyers, and two submarines.

NOTE.—The following record is prepared from the best available information, and no doubtful case has been included. As is well known, however, losses may be secreted for various reasons, so that the account cannot be regarded as complete. Only those German submarines are shown whose loss *and identity* have been announced by the British Admiralty. Torpedo-boats, mine-sweepers, and armed trawlers are not included, because it is impossible to get anywhere near the truth regarding these types. The letters in brackets after the ship-names have the following significance: -Ac., Accidentally lost; C., Captured; G., Destroyed by gunfire; M., Mined; S., Torpedoed by submarine; Sc., Scuttled; T., Torpedoed by surface-ship.

Japanese losses, not shown above, are the protected cruiser Takachiho, torpedoed by the German destroyer S 90 on Oct. 17, 1914, and the destroyer Shirotaye, which ran aground on Sept. 4, 1914, and became a total loss. † Was "bottled up" on this date, and destroyed in July, 1915.

A Naval Biographical Index.

THE following notes relate to some of the senior officers who have distinguished themselves in the war, or who hold important appointments. The date following the name is that of the officer's birth :—

Allen, Capt. J. D. (28.3.75). A torpedo specialist, who has received the C.B. for his services in command of H.M.S. *Kent* at the Falklands, &c.

Bacon, Vice-Adm. (retired) R. H. S. (6.9.63). Commands the Dover Patrol, and was the first Inspecting Captain of submarines and the first officer to command H.M.S. *Dreadnought*.

Ballard, Rear-Adm. G. A. (7.3.62). Is Admiral of Patrols, commanding administratively the torpedo-craft which, prior to the war, were not attached to the First Fleet.

Beatty, Vice-Adm. Sir D. (17.1.71). Reached flag rank at the extremely early age of 38, and has commanded the First Battle-Cruiser Squadron since before the war.

Brock, Rear-Adm. O. de B. (5.1.69). Commanded the battle cruiser *Princess Royal* in the North Sea actions of Aug. 28, 1914, and Jan. 24, 1915; and received the C.B. for the latter service. Now flies his flag under Sir D. Beatty.

Burney, Vice-Adm. Sir Cecil (15.5.58). Has had much experience in war and the command of fleets, and is second in command of the Main Fleet.

Callaghan, Adm. Sir G. A. (21.12.52). Commanded the Home Fleet down to the outbreak of the war, and has served longer afloat as a flag officer than any other on the active list. Is now Commander-in-Chief at the Nore.

De Robeck, Vice-Adm. (acting) J. M. (10.6.62). Was first to hold appointment of Admiral of Patrols, and on Mar. 16, 1915, took command of the combined squadron at the Dardanelles in succession to Vice-Adm. S. H. Carden.

Dreyer, Capt. F. C. (8.1.78). A leading gunnery expert, who commands H.M.S. *Iron Duke*, and is Flag Captain to Sir John Jellicoe.

Fox, Capt. C. H. (27.5.73). Was in command of H.M.S. *Amphion* when that vessel was mined, and of *Undaunted* when four German destroyers were sunk off the Dutch coast in October, 1914.

Glossop, Capt. J. C. T. (23.10.71). Commanded H.M. Australian Ship *Sydney* when that vessel destroyed the *Emden*. Was awarded the C.B. for this service.

Goodenough, Commodore W. E. (2.6.67). Commands the First Light Cruiser Squadron, flagship, H.M.S. *Southampton*, and rendered invaluable service in the North Sea actions of Aug. 28, 1914, and Jan. 24, 1915.

Hall, Commodore S. S. (16.6.72). An experienced submarine officer who is now at the head of the submarine service.

Hall, Capt. W. R. (28.6.70). Commanded the battle-cruiser *Queen Mary* in the early stages of the war, and is now Director of the Intelligence Division of the War Staff.

Hood, Rear-Adm. the Hon. H. L. A. (2.10.70). Commanded the Anglo-French Fleet which bombarded the Germans on the Belgian coast in Oct.-Nov., 1914, and now holds a more important appointment in a battle-cruiser squadron.

Hope, Capt. G. P. W. (11.10.69). First captain of H.M.S. *Queen Elizabeth*, and for some time flag-captain to Adm. de Robeck at the Dardanelles.

Jackson, Adm. Sir H. B. (21.1.55). First Sea Lord of the Admiralty; an officer of high scientific attainments who has been President of the War College and Chief of the Admiralty Staff.

Jackson, Capt. T. (20.2.68). Saw a good deal of the Russo-Japanese War; was the first Director of the Intelligence Division of the War Staff, and now directs the Operations Division.

Jellicoe, Adm. Sir J. R. (5.12.59). A gunnery specialist; was Second Sea Lord at the outbreak of the war, when he was appointed Commander-in-Chief of the Home Fleet, now sometimes called the Main or Grand Fleet.

Kelly, Capt. W. A. H. (6.9.73). Commanded the light cruiser *Gloucester* when that vessel shadowed the *Goeben* and *Breslau* from Messina to the Dardanelles. Awarded the C.B. for this.

Keyes, Commodore R. J. B. (4.10.72). Was head of the submarine service at the outbreak of the war, and was subsequently appointed Chief of Staff to Adm. de Robeck at the Dardanelles.

Lashmore, Engineer Captain H. "In charge" of H.M.S. *Inflexible*, this officer has been thrice honoured for war services, receiving the C.B. and the D.S.O., and being specially promoted to his present rank.

Lowry, Adm. Sir R. S. (4.3.54). Is senior officer on the coast of Scotland, with headquarters at Rosyth, and was the first to be appointed to that post.

Luce, Capt. John (4.2.70). Commanding H.M.S. *Glasgow*, was awarded the C.B. for service in the actions off Coronel and the Falklands.

Madden, Vice-Adm. (acting), C. E. (5.9.62). Is Chief of the Staff to Sir John Jellicoe, whose brother-in-law he is.

Oliver, Vice-Adm. (acting) H. F. (22.1.65). Was Director of the Intelligence Division of the War Staff at the outbreak of the war, and became Chief of the Staff in November, 1914.

Scott, Adm. (retired) Sir P. M. (10.7.53). Was recalled from retirement for special service at the Admiralty in November, 1914, and in September, 1915, was put in command of the anti-aircraft guns defending London.

Sturdee, Vice-Adm. Sir F. C. D. (9.6.59). Was Chief of the Admiralty War Staff at the outbreak of the war, and took command in November, 1914, of the squadron which was concentrated for dealing with the German force under von Spee. Now commands a battle squadron in the Main Fleet.

Sueter, Commodore M. F. (6.9.72). The first Inspecting Captain of Aircraft, and the first Director of the Air Dept. at the Admiralty. Was appointed to be Superintendent of Aircraft Construction in Sept., 1915.

Tyrwhitt, Commodore R. Y. (10.5.70). Has commanded the destroyer flotillas attached to the First Fleet since Dec., 1913. His flagship, the *Arethusa*, has earned much distinction in the war, as also have the destroyers under his command.

Vaughan-Lee, Rear-Adm. C. L. (27.2.67). Was appointed Director of Air Services in Sept., 1915, following upon "successful" air raids on London.

Webb, Capt. Richard (20.7.70). Was appointed Acting Director of the Trade Division of the War Staff, which was created after the outbreak of the war.

"Trading with the Enemy."

The Public Trustee as Custodian of Enemy Property in England and Wales.

ON the declaration of war with Germany the Government took immediate steps, by Proclamations of Aug. 5, Aug. 12 and Nov. 5, 1914, to terminate all trade relations between this country and Germany, and Austro-Hungary and Turkey, and to prevent any dealings with such enemy property in this country.

A further Proclamation of Sept. 9, 1914, specifically enumerated the acts on behalf of an enemy or the dealings with enemy property which were forbidden and stated to be crimes and punishable as such, "*an enemy*" *being described as "any person or body of persons of whatever nationality resident or carrying on business in an enemy country.*" A person, therefore, of enemy nationality, resident or carrying on business in this or a neutral country, is not an enemy within the meaning of the Proclamations and subsequent Acts, but a person of British, Allied, or neutral nationality resident in an enemy country is an "enemy."

In the case of incorporated bodies, enemy nature attaches only to those incorporated in an enemy country, and does not attach to the branch of an enemy business locally situate in British, Allied, or neutral territory not being neutral territory in Europe.

The Trading with the Enemy Act was passed on Sept. 18, 1914, and was described as an Act to make provision with respect to penalties for trading with the enemy and other purposes connected therewith; and this, in addition to enforcing and amplifying the enactments of the Proclamation of Sept. 9, and to fixing penalties for infringements thereof, provided for the examination of any person and the searching of any premises in connexion with a suspected offence under the Act, and for the inspection by a person appointed by the Board of Trade of the books or accounts of any company or partnership financed to a definite degree with enemy capital. Power was also given for a controller of such businesses to be appointed in certain circumstances.

Further Proclamations, dated Sept. 30, 1914, and Oct. 8, 1914, restricted the import of sugar produced by an enemy or in an enemy country; and the Proclamation of Oct. 26, 1914, extended the prohibitions of trading with the enemy to any branch of an enemy bank situate outside the United Kingdom and to any banking business with any branch of any business so situate.

The Trading with the Enemy Amendment Act, 1914, made further provision for preventing the payment of money to persons or firms resident in, or carrying on business in every country with which His Majesty is, for the time being, at war, and for preserving, with a view to arrangements being made at the conclusion of peace, such money and certain other property belonging to enemies.

This Act provided for the appointment of Custodians in the United Kingdom to receive such monies and to register such properties, *and appointed the Public Trustee Custodian for England and Wales.* Further prohibitions and restrictions also were applied in respect to assignments of debts, transfer of shares in companies, dealing with negotiable instruments, and the granting of certificates of incorporation to companies; and the powers of the Board of Trade in connexion with the appointment of inspectors, supervisors, and controllers in relation to companies and businesses were extended.

The Proclamation of Feb. 16, 1915, extended the prohibitions in relation to trading with the enemy to *all persons* resident or carrying on business in hostile occupation; the Proclamation of June 25, 1915, extended the said prohibitions to *persons of enemy nationality* resident or carrying on business in China, Siam, Persia, or Morocco.

The Proclamation of Sept. 14, 1915, declares that in all Proclamations for the time being in force relative to trading with the enemy, the expression "enemy" includes any incorporated company or body of persons (wherever incorporated) carrying on business in enemy territory or in territory occupied by hostile forces.

The Trading with Enemy Amendment Act, 1915, amplified the payments to be made to and the property to be registered with the Custodians; the effect of these two Amending Acts being as follows:—

1. That all sums are payable to the Custodians which would, in the ordinary way, be payable to enemies by way of dividends, interest, or share of profits, or such capital sums as may become repayable from time to time in respect of securities registered in the name of, or held for, enemies.
2. That all companies with enemy shareholders shall make to the Custodian a return showing the capital belonging to such enemy shareholders, and that all firms with enemy partners shall disclose the capital of such enemy partners.
3. That all persons who hold or manage any property (including debts—£50 and over—and bank balances) on account of enemies shall make a return of the same to the Custodian.

The general effect of these requirements is that all property in England and Wales of whatever nature held for enemies is registerable with the Public Trustee as Custodian, and all income falling within certain definite categories is paid over to him.

The aggregate results of the returns received to date are:—

1. ENEMY INCOME RECEIVED.		
Dividends, interest, and share of profits (including certain repaid securities)		£1,500,000
2. ENEMY PROPERTY REGISTERED.		
(*a*) Property held or managed (including debts and bank balances)	£72,500,000	
(*b*) Capital in partnerships and businesses	1,600,000	
(*c*) Capital in companies	30,000,000	104,100,000
		£105,600,000

The Public Trustee is also concerned with the registration of Foreign claims, and the collection of royalties under Patent Acts. For particulars apply to the Special Department, No. 2, Clement's Inn, W.C. (telephone, 1420 City).

THE unexpected developments in the warfare on land and sea have had a counterpart in the unprecedented expenditure arising out of the campaign. Money which in times past nations would never have dreamed for one moment of spending upon objects likely to have a far-reaching and beneficial effect, has been poured out like water rushing in torrent down mountain side. But that it is money well spent so far as the Entente is concerned, who will deny?

Clearing up Aug., 1914.—The moratorium which gave relief to the whole of the business community ended on Nov. 4 (experts gave a further three months before expiry). November saw the Government's scheme for the relief of Stock Exchange members. The joint-stock banks agreed to continue without pressing for settlement the loans existing upon securities. Throughout the ensuing months the debts were gradually liquidated, especially with U.S.A. securities, which rose in price above the markings of end July, 1914. In November the U.S.A. owed us considerable sums which could not be paid without difficulty through the usual channels. The exchange rate was over 4.90 dollars (the normal is 4.87) to the British £1. Gold was being forwarded to the temporary agencies opened by the Bank of England in the Dominions.

3½ per Cent. War Loan.—The issue of £350,000,000 at 95 was made on Nov. 1, 1914, the final instalment of the principal being due April 26, 1915. The loan was over-subscribed. The market price was 92⅛ on Oct. 8, 1915—a proof of the stability in value notwithstanding the calls made on account of new issues and increased taxation.

Stock Exchange.—Wall Street, N.Y., re-opened for business on Dec. 12, 1914, with a minimum price list. A similar price list was in operation in London, where all business had to be done on a strictly cash basis. Until the London Stock Exchange was opened on Jan. 4, 1915, transactions had to be arranged in the Street adjoining the building and in the rooms of members. The whole of the business of the Exchange has been of a restricted character, and market prices can hardly be considered fair values. But to have had a free market in every stock would have opened the way for abuse of privilege and overt assistance to the enemy.

Money Market.—Money could have been obtained at very low rates from Lombard Street during January, 1915. Such a position was to be expected. The ease of money, due to the jar caused by the war on our credit system, led to a contraction in demand for accommodation in support of commercial and speculative enterprise. This might have been grasped to the full by the Government for getting cheap loans, especially as part of the money was freed by the State's guarantee on the discounting of pre-moratorium bills. The rates for first-class bills of short currency rose slowly from 1½ to the figure of 4½ per cent., in force in Oct., 1915.

Treasury Bills.—The Government continued to use 6 and 12 months' Treasury bills for temporary borrowing. Between March 30 and April 13, 1915, the sum of £45,000,000 was secured in three lots at percentages between £2 14s. and £3 14s. 4d. On the latter date the method of issuing Treasury bills was altered. Instead of asking for estimates for the rate of interest from applicants for the bills, the rate was fixed, and, further, bills would be issued whenever demanded. Under the new system, bills to the value of £23,326,000 were sold in the second week's operations. The fixed rates were 2¾ and 3⅜ per cent. for 3 and 6 months.

4½ per Cent. War Loan.—The freedom with which new issues were being introduced to the market made it clear that the investing public was ready for a further loan. Mr. McKenna succeeded Mr. Lloyd George at the Exchequer on May 26, and in less than a month another "Budget" appeared. On June 21 a War Loan for an unlimited amount at 4½ per cent. was issued at par. Various means were adopted to popularise the loan. The sum of £570,000,000 in amounts of £100 and upwards was offered by 555,000 subscribers. In sums of less than £100, 547,000 applicants put up £15,000,000 through the G.P.O. By keeping the list for 5s. and other small vouchers open, another £2,500,000 was secured by the end of August. The fees paid in connexion with conversion rights which were available to holders of certain loans helped to swell the final total to £600,000,000.

Loan Influences.—The collection of so huge a sum by the Bank of England did not cause more than a ripple on the surface of the banking business of the community. Monies were transferred from the joint-stock banks with the minimum disturbance of credits, thanks to the arrangements for temporary assistance to bankers by the Treasury. To replace monies withdrawn by depositors for loan purposes, the joint-stock banks increased their interest rates to 3 per cent., and finally 3½ per cent. The Government could no longer find applicants for Treasury bills at the old rates. A new percentage of 4½ was fixed for Treasury bills of 3, 6, 9, and 12 months. Notwithstanding its size, the War Loan has maintained its value; the price on Oct. 10 was 98, or less than a 1½ per cent. fall from the net issue price. In addition to the loans and Treasury bills, the Government borrowed £50,000,000 by 3 per cent. Exchequer bills in March.

Meeting War Cost.—Since August, 1914, Parliament has sanctioned eight votes of credit. The year ended April, 1915, called for four credits totalling £362,000,000. Since then, four other votes to the sum of £900,000,000 have been granted on account of the year 1915–16. The provision of this amount (£1,262,000,000) has been effected for the most part by the means referred to of loans, bills, &c. Experts differ upon what ratio of the war cost should be met by immediate taxation. During Sept.-Oct., 1915, the Chancellor raised the Income Tax upon unearned monies to 3s. 6d. in the £, increased excise duties, and imposed a charge on certain imports and excess profits. From his taxation he expected to raise in the financial year £305,000,000, as compared with the mere £198,000,000 of 1913–14.

Bank and Currency Notes.—The Bank of England maintains its freedom in gold dealings. Its notes have been, and are, payable in gold on demand. The actual bullion of the Bank has been as high as £72,570,142 (Nov. 17, 1914), and as low as £52,091,878 (June 30, 1915). On Oct. 6, 1915, the gold in the Bank amounted to £61,249,793, against which was an active note circulation of £32,876,520. The currency note expansion has been slow, averaging £1,000,000 increase weekly. On Nov. 11, 1914, the currency notes outstanding totalled £33,678,952, with a gold reserve of £11,500,000. On Jan. 27, 1915, the notes had reached only £35,409,000, with a gold reserve of £22,500,000. By Oct. 6, 1915,

the notes had grown to £75,682,739, with a gold reserve of £28,500,000. The public fails to recognise even now that the only place for gold in the United Kingdom is the Bank of England. Gold in the Bank is a sign of strength to the world. France and Germany realise that fact and are canvassing for bullion to be sent to the national bank. Persons who hoard gold as a kind of self-insurance in case the worst happens fail to grasp what would take place in case of invasion. Property is not respected by Huns.

Foreign Exchanges.—All trading is done on a gold basis. But bullion seldom changes hands. Paper is the currency of the world, settlements being made by the exchange of bills. In this country, a debtor to another country will buy a bill held by a creditor to the other country and despatch it in payment of what he owes. The exchange of bills saves the expense of forwarding gold. If there is a shortage of bills the purchasing price rises, and it becomes cheaper to send bullion. An example of this appears in an earlier paragraph with regard to U.S.A.

National Trade.—For the nine months ended Sept. 30, 1915, the imports to the United Kingdom totalled £643,888,258, or £121,413,913 more than the corresponding period of 1914. On the other side of the balance sheet, the exports decreased £67,656,677 to £283,091,686. These figures do not take into account the vast increase in the goods exported by the Government. The balance of trade, especially with the U.S.A., went against this country, and concomitantly the rate of exchange fell.

U.S.A. Exchange.—The rate of exchange with U.S.A. fell gradually from Nov. 8, 1914, when it was 4.91½ dollars to the £. On Jan. 8, 1915, it was 4.84⅛; Feb. 19, 4.81; July 19, 4.76¾; Aug. 11, 4.75⅜; Aug. 16, 4.67; Aug. 17, 4.65; Sept. 1, 4.47; Oct. 8, 4.70. With an exchange rate of 4.47, there was a loss of 40 cents (say 1*s.* 8*d.*) upon every £1 spent in the U.S.A. There were three ways of improving the exchange rate. Gold could be forwarded; foreign investments held in the United Kingdom realised in New York; a loan raised in U.S.A. All three ways have been tried. Gold has been transferred from Ottawa, and investments have been sold, but not in sufficient amount to stay the falling exchange.

U.S.A. Loan.—Procrastination seems to have been the policy adopted in facing the fall in the exchange rate. Had action been taken earlier, the terms obtained subsequently when the loan had to be raised might not have been so onerous. Headed by Lord Reading (Lord Chief Justice) and Sir E. Holden (London City and Midland Bank, Ltd.), an Anglo-French Commission arrived in New York on Sept. 10. Within a fortnight, a loan of £100,000,000 was arranged at 5 per cent., with a net issue price of 96, repayable or convertible at par in five years hence. The further advantage to the investor of interest being paid free from British Income Tax deduction helped to bring the real cost of the loan to Britain equal to 7 per cent.—a stiff price to pay. The loan was made jointly on behalf of the British and French Governments.

Spending the Loan.—The loan is a credit operation. All the money obtained is to be spent in the U.S.A. on behalf of munitions and other supplies for the Entente. Actual money will not cross the Atlantic. The loan could have been raised here and the proceeds forwarded to U.S.A., in either of the forms mentioned above. Gold and securities are not wanted in the U.S.A. from here—a large influx would be detrimental to the receiving country.

Economic Organisation.—The British people have failed to appreciate the part finance has played, and will play, in hastening the war to a successful conclusion. Every article purchased abroad means a loss of equivalent value in the amount of money available in the United Kingdom for carrying on the war. Also, the payment for each article reflects adversely on the rate of exchange, and thereby lies further loss. Waste has to be fought. Articles no longer essential must not be bought (WHITAKER'S ALMANACK is an absolute necessity). The argument that men and women will be rendered unemployed should the nation become suddenly thrifty, is answered by the conviction that more persons will be ready and at hand for war work, of which still too little is being done.

More Money Wanted.—As this is being written (Oct., 1915) the national need for more money is becoming apparent. A discussion is taking place as to the nature and date of the next war loan. More millions and still more millions will be required before peace can be considered at hand. The Government must have the wherewithal to buy munitions as well as meet establishment charges. Ample funds, lying dormant all over the nation, are in existence, but the difficulty is to get them into the Government's hands. With the wealth of the British Empire, it should not be necessary for hoardings to be covered with appeals of "Please buy a 5*s.* War Loan voucher." People ought to take their monies and say to the Government, "Here are the funds necessary for the campaign; we understand that unless you have the money you will not be able to carry on to victory." What will it profit a man if he save his petty share certificate and thereby sell his country?

ABROAD.

France and Russia.—The French Government has been compelled to borrow from the Bank of France, the conditions of the Paris money market making borrowing on a national scale impossible. When war was declared French credit was in a disorganised condition owing to a newly issued *Rente* loan. On Oct. 7, 1915, the Bank of France had advanced the State £276,000,000, and issued notes of £546,563,400, against a gold holding of £184,053,600. The French exchange has been favourable to London (Oct., 27.30 frs. to the £1, or 2 frs. above normal). Russian exchange has been in an unsatisfactory state, the value of the rouble falling almost 50 per cent. on one occasion. Attempts to ease the exchange by raising credits in London have been of little avail; the only way is the opening of Russian ports for trade. Russia has been financed through the National Bank; the note issue at end of September being £450,000,000, against a gold holding of £150,000,000.

Austria and Germany.—Austria has raised three loans. The terms of the third loan testify her condition—5½ per cent., with an issue price of 93·6, repayable at par in 15 years. Germany has fallen back upon paper currency. The Reichsbank return of Sept. 30 showed a gold holding of £120,971,700 for a note issue of £307,881,500, compared with £97,434,000 and £200,458,200 on Nov. 23, 1914. Germany has raised three loans, but the methods of obtaining subscriptions have not savoured of getting new money or of enthusiasm. Large issues of inconvertible notes have been made. G. G. SHARP.

British Imports in Raw Materials from Greater Britain.

A VALUABLE effect of the war has been to focus the attention of British citizens on the vast resources of the British Empire, and one of the results of it unquestionably will be to encourage those who have been engaged in the struggle to turn their attention more keenly than in the past to the exploitation of the opportunities that the Empire affords. The boast that the sun never sets on the British Empire is no idle one, for it indicates clearly enough the great range of mineral wealth available, and the large possibilities that exist for raising almost every conceivable variety of crop and stock. When one comes to look at the land at present under cultivation for the production of corn and grain and cattle foods, the figures are so vast as scarcely to convey an intelligible meaning to the imagination. During the year ending March, 1915, Canada had a surplus stock of wheat available for export of some seventy-two million bushels, not to mention the fact that she also exported close on five million barrels of flour. In 1913 Australia recorded a yield of 103,344,132 bushels, and had roughly half of this available for export; while the value of the wheat exported from India in 1914 was five and a half million pounds—a drop incidentally of some three million pounds on the previous year. Oats, barley, rye, maize, rice, arrowroot, tapioca, sago, peas, beans, and hay are only some of the other products falling into this category, and the supplies that Great Britain requires of these year by year to support her manufacturing population are to a large extent derived from the countries within the Empire.

Dairy produce, meat, and fish form another convenient category. In butter alone Great Britain derives 4½ million pounds' worth from Greater Britain; 81 per cent. of her imports of cheese come from the Dominions; a quarter of her meat supply, amounting in 1914 to £16,240,324, is imported from Australia, New Zealand, Canada, and other possessions; while the Empire fisheries yielded to the Mother Country a supply valued at about £2,000,000.

Sugar, fruit, and wine are conveniently classed together. Close on a million pounds' worth of sugar comes to the United Kingdom from British possessions, but this constitutes only about 4 per cent. of the total amount imported. About a million pounds' worth of apples comes from the Dominions to this country, and the extent of the fruit industry throughout the Empire can be indicated by the figures showing the exports sent out from the Union of South Africa. The value in exports of fresh fruit from the Empire in 1914 amounted to £93,049, as compared with £54,315 in 1913, the exports for 1914 comprising: apples, £1,280; apricots, £303; bananas, £784; grapes, £20,467; naartjes, £2,616; nectarines, £1,346; oranges, £17,804; peaches, £8,995; pears, £24,814; pineapples, £2,407; plums, £10,004; and other fruits, £2,229. Wines for the most part come to us from foreign countries, but South Australia, Victoria, New South Wales, the Channel Islands, Cyprus, and the Union of South Africa send wines to this country of the value of about £145,000, while the quantity exported generally from the Commonwealth of Australia reached in 1914 the respectable total of £104,949. In tea the Empire is nearly self-supporting, and, if necessary, could be almost entirely so, for of the total British imports—amounting in 1914 to £14,221,496—£12,086,892 are derived from British possessions. Of coffee only a percentage is supplied, the British total amounting to £607,720 worth, while £2,938,511 worth is sent to us from foreign countries. British possessions yield about half the total supply of cocoa, and the greater part of the spices used in this country come from within the Empire.

Vegetable oils and oil-seeds constitute an important trade, and in the different departments of it the British Empire is well represented. Over 99 per cent. of the imports of castor seed, worth over half a million sterling, comes from India; more than one-half of the cocoanut oil (unrefined) is similarly derived; while copra to the extent of £1,378,531 came from the Dominions, whereas only £306,338 worth was imported from foreign countries. Cotton seed is supplied to the value of £2,126,907 from the Dominions, and apart from this Egypt supplied us with £1,735,778 worth and other countries with £457,622 worth. The value of linseed imported in 1914 from the Empire was £2,966,462—a drop of £1,400,000 on the previous year—while other countries supplied linseed to the value of £2,757,384. Some other seeds and oils derived to a greater or less extent from the Empire are Nrowra seed, niger seed, palm oil, poppy seed, rape seed, sesamum seed, and shea nuts.

In 1914 66·3 per cent. of the British rubber imports came from the Empire. The grand total of imports was worth £15,844,428, and in supplying this the Straits Settlements led with a value of £5,248,734, the next in value being Brazil with £3,433,581, the Federated Malay States with £2,512,500, and Ceylon with £2,328,024. The imports of gutta-percha show large variations, as practically the only use of the material is for insulation purposes, and stocks are allowed to accumulate in the producing countries pending the demand arising from such causes as the construction of a new cable. In 1913, for instance, the value of the total imports was £1,370,658, of which £703,387 came from Greater Britain, while the corresponding figures for 1915 were £620,429 and £492,555.

Up to the present the greater portion of the supply of tobacco comes from outside the Empire. Only £43,861 worth of a total of £1,013,413 of manufactured tobacco comes from British possessions, while the corresponding figures for unmanufactured tobacco amount to £90,529 and £6,449,655. It seems possible, however, that this situation may change. In the year 1913–14 British East Africa exported tobacco for the first time. Experiments in tobacco-growing in Uganda have been made by the Department of Agriculture. New Zealand has shown that tobacco can be grown there successfully, while wherever tobacco has been tried in Australia the soil and climate have both proved suitable.

For cotton the country relies chiefly on the United States and on Egypt, the former in 1913 supplying a value of £47,307,766 and the latter £17,642,358, while the total British supply was only £1,931,963. For 1914 the corresponding figures were: the United States, £34,958,341; Egypt, £13,682,095; and the total British, £3,201,898. It should be noted, however, that Indian cotton is better suited for Continental than for British use, and in 1913–14 India exported raw cotton to the value of £27,361,655. Efforts are being made to extend the area under

cotton cultivation in Uganda. In the Anglo-Egyptian Sudan means have become available for commencing an irrigation scheme for cotton-growing in the Gezira, and it is possible that eventually three million acres may be used for the purpose. In hemp the produce is considerable, New Zealand, India, Mauritius, Hong Kong, and other British possessions having sent to this country in 1914 £801,904 worth of the material, as compared with a total import of £3,353,143. In jute India holds almost a complete monopoly, her exports to the United Kingdom in 1914 amounting to £6,346,602, against £65,916 from other countries. For the previous year the figures were even more striking, India having supplied £9,182,226 and other countries £64,372. Wood pulp comes chiefly from Norway, Sweden, Russia, and Germany, but in 1913 Canada supplied wet pulp to the value of £259,702 and Newfoundland to the value of £129,380.

Comparatively little silk is imported into this country, and of this small amount only about a thirtieth part comes from British possessions. The wool industry, however, is of very large dimensions, Great Britain having imported in 1914 from the Overseas Dominions wool to the extent of £26,105,379 and from foreign countries to the extent of £5,107,360. It may be noted further that the production of wool in New Zealand is steadily growing, while in British East Africa it has been proved that under proper management the sheep-farming industry is sound and profitable. More than half of the mohair is imported from the Empire, £883,953 worth coming from the Overseas Dominions in 1914 and only £566,640 from foreign countries.

For timber Great Britain relies at present chiefly on the foreigner. In 1914 the imported in all a quantity valued at £25,343,111 (a drop of three millions sterling on the previous year), and of this only £4,812,815, or 19 per cent., came from British possessions.

Mineral wealth forms one of the great assets of the British Empire, and it is not practicable here to do more than mention a few of the larger mineral deposits now being worked. In precious stones in 1913 the Union of South Africa alone imported into Great Britain 5,498,555 carats, representing a value of £11,986,083, but in 1914 the imports dropped to a value of £5,470,899. Little platinum is imported from British Dominions, but the mineral is mined in small quantities in New South Wales and Victoria. About two-thirds of the world's gold is found in the British Empire, the Transvaal producing annually about £37,000,000; Rhodesia, £2,900,000; West Africa, £1,600,000; Australia, £11,000,000; Canada, £3,100,000; India, £2,300,000; British Guiana, £600,000; and British Borneo, £300,000. Of the silver imported into Great Britain in 1914, amounting to £888,642, £308,459 was derived from Australia and other British possessions. About a quarter of the lead was of Imperial origin. The United States furnish the greater portion of the nation's copper, and in 1914, whereas the total imports of copper, unwrought, in bars, ingots, &c., of British origin were valued at £1,119,749, those from the United States were valued at £5,876,087, and the total imports stood at £9,121,288. In tin the Empire is practically self-supporting, and in 1914 the Dominions supplied tin to the value of £6,233,495, the total imports from foreign countries only amounting to £125,650. The same does not quite hold good as regards tin ores, where the comparative figures were £803,519 and £2,177,954. Though the country imports iron ore to the value of £5,014,461, very little of the material comes from the Dominions, the chief proportion—£3,052,076 worth—being imported from Spain. Australia, Canada, and New Zealand are all considerable exporters of zinc, and Australia also furnishes a good percentage of the antimony imported. Quicksilver is remarkable as being exported to this country from none of the Dominions. Both tungsten and molybdenum are found in various parts of the Empire, and in 1913 half the world's production of molybdenite ore came from Australia. About two-thirds of this country's supply of asbestos come from British possessions, but the imports are not very considerable, only £181,010 worth of the mineral being imported in 1914. Coal is widely distributed, and as regards the imports of mica about 90 per cent. are from the Dominions, chiefly from India. Petroleum and motor spirit are, at present, only imported in small quantities from the Dominions, but there seems reason to believe that there may be a considerable development of sources of supply within the Empire. India already sends us motor spirit, valued in 1914 at £681,165; Trinidad is becoming a larger exporter, while Papua seems to have considerable resources. Barbados appears to have some future as an oil-producer. On the other hand, the Canadian output has been steadily declining for the last seven years.

Animal products form a last important class of the raw materials derived from within the Empire. Of raw hides, dry, other than calf skins, the Empire furnished in 1914 £1,808,385 worth, as compared with £1,106,361 from foreign sources. The similar figures for raw hides, wet, other than calf skins, were, however, £655,839 and £2,134,741. British goat skins, undressed, were imported to the value of £923,383, while foreign skins only came in to the value of £245,998. Similarly, the British origin sheep skins with wool on were imported to the value of £1,781,266, while only £301,900 worth of foreign skins came in during the same year. The corresponding figures for sheep skins pickled were £570,595 and £47,277. The value of sealskins imported from the Empire reached £41,106, while that from foreign sources reached £28,815. The value of imported rabbit skins, dressed, was £110,951, but these were imported chiefly from Belgium and France. In tallow the predominance of Empire products is well maintained, for of the total imports, valued at £2,662,228, only £469,573 worth was derived from foreign sources. In whale oil, &c., the value of the British products was £379,139, as against £760,261 from foreign sources.

It is of importance to note that during the past year a good start has been made by British traders to capture the palm kernel and copra crushing industries that were before practically German monopolies. In a single year the import of palm kernels alone to Hamburg has exceeded 5¼ millions. After the oil has been extracted palm kernel and copra cakes have been found valuable as feeding materials for live stock. Already machinery has been erected for the purpose in Hull, and if the British farmer will co-operate by using the new material, a highly remunerative new industry will have been established in the country as a direct result of the war.

British and Enemy Trade.

As a result of the war the huge commercial system built up by Germany, and to a lesser extent by Austria-Hungary, has been the subject of the closest scrutiny and analysis. Attempts have been made by the Board of Trade to collect and collate the information they have available on foreign markets and on the methods employed by Germany in pushing trade in neutral countries and in the British Dominions, with a view of enabling Great Britain, both during and after the war, to take up and maintain the position to which her real commercial supremacy entitles her. The work already done by the Board has proved how greatly some such enterprise was needed, for when the enemy products have been collected, with the wholesale prices marked on them, there has hardly been a single occasion when British manufacturers have not been able to quote prices for goods of corresponding quality, at least as low, if not lower than those of the enemy trade rivals. Investigations show that there is wide scope for British enterprise in a large variety of markets. There is scarcely, if at all, any industry in which British trade could not be expanded, and there are a large number where the markets held by Germany before the war are so valuable as richly to repay the cost in time and energy that would be necessary for their capture. In cotton hosiery, for instance, the German exports for the year 1912 had a value of £3,319,000, while in the year following the British exports were only worth £199,000. The consular reports show that a great opening exists for British goods, but that hitherto manufacturers have not taken advantage of them. Thus H.M. Trade Commissioner in Canada writes: "There is, I am informed, an opportunity for expansion of British makes in the higher qualities . . . such articles as do find their way here are extravagantly priced, and the sale is therefore restricted." And, again, H.M. Trade Commissioner in Australia writes: "I beg to report that German and Continental manufacturers of cotton hosiery are displacing the British manufacturer, for the reason that their goods have a softer finish. I am informed that British cotton goods are harsher, and, as a matter of fact, would wear better, but in this hot climate the articles that are soft to the skin, even if they do not last so long, have an immense advantage." From South Africa attention is drawn to the enterprise shown by the German manufacturer in marketing: "They take great pains in the selection of suitable agents; they pay them well, and support their efforts in a ready fashion. German firms are ever willing to adapt their goods to the wants of individual merchants, and they give prompt delivery. They also never fail to include in their package attractive samples of numerous other goods which they are capable of supplying. This unsolicited distribution of samples must certainly cost money, but it pleases, and very often results in the placing of the initial orders."

In printed cotton piece goods the situation is more satisfactory, Germany in 1912 having exported goods to the value of £6,211,000, while the value of goods from the United Kingdom reached £16,744,000. In men's cotton clothing the United Kingdom exported in 1913 goods to the value of £4,686,000, while the German output was £637,000. Comparative figures for men's woollen clothing were £2,129,000 and £392,700, and for women's and girls' clothing £3,662,300 and £6,516,852. In 1913 the total exports of British cotton piece goods reached the enormous total of £97,800,000.

In woollen and worsted tissues the German exports in 1913 reached the huge total of £13,542,600, and the chief German markets, apart from the United Kingdom, were Turkey, Rumania, British India, South America, the U.S.A., Japan, China, and Egypt. In iron and steel wire Germany shows a large preponderance, her exports in 1912 having totalled £3,176,000, as compared with the figure for the United Kingdom in 1913 of £1,058,100. In these markets, as elsewhere, the British manufacturer appears rather to have overlooked local needs and local conditions, and to have contented himself with offering for sale a thoroughly good article which cannot compete in cost with other material of inferior quality, which, however, meets the requirements of the colonial trade. In electrical appliances Germany has found means of capturing a very large market. Her exports in 1912 reached the large total of £8,034,000. In this trade the evidence of H.M. Trade Commissioner in South Africa suggests that it is in the reduction of works costs effected by an increased output or by better shop organisation that in the past has enabled German firms to under-quote British houses. In the boot and shoe trade the position of the United Kingdom is satisfactory, her exports reaching a value in 1913 of £4,307,000, while those of Germany reached £1,281,000, and of Austria-Hungary £1,037,000. In certain countries, however, it seems possible that the British trade might be very considerably increased. Great Britain seems quite to have failed to get an adequate share of the trade in internal combustion and explosive motors, gas turbines, &c., and among the reasons given for this by H.M. Trade Commissioner for Canada mention is made of a typical British fault: "The catalogues of the British manufacturers are accompanied by a technical description which may perhaps best be described in the concluding sentence usually found in such catalogues, viz., 'The above will appeal to any engineer.'" In the implement and tool trade Germany has proved a formidable competitor with the United Kingdom, having a total of £4,184 000, as contrasted with £2,796,600. Among the reasons why this country does not secure as much of the trade as she might do the following appear conspicuous: Less careful consideration of the needs of the buyer, insufficient energy on the part of local dealers, and lack of attention to unessential points of finish which often prove very attractive to the purchaser.

In brass and brass wares German competition is very severe, the volume of her export trade being £6,428,550, as compared with £1,653,000. To some extent the comparison is misleading, as the German figures necessarily include a number of articles not strictly brass; but British trade in South Africa particularly seems to have suffered seriously from gross carelessness in packing, a case being quoted when out of 72 grates consigned 71 arrived more or less damaged owing to this cause. In the colour-printing industry it would appear that there are considerable openings, and dealers do not seem to have realised that British firms are in a position to hold their own with German firms, both from the standpoint of price and quality. In toys and games the United Kingdom has

made a striking advance in recent years, but her exports in 1912 only amounted to £629,200, while those of Germany were £2,756,500. In machine tools the German trade, with a value of £4,200,000, is about four times that of the British. In Japan and Australia British machine tools are preferred, but elsewhere there is an immense field for the expansion of British trade at the expense of Germany. In bicycles and bicycle parts the United Kingdom exports to the extent of £2,087,200, as against Germany's £1,335,500, and some criticism is directed against British machines on the grounds that they are unduly heavy, owing to accessories, and too highly priced. Both Germany and Austria-Hungary have a large trade in hollow glass ware, German exports being £2,690,200, Austro-Hungarian £1,568,800, and British £1,100,700. In the principal foreign markets the United Kingdom has little share of the trade, in India and Australia there is keen competition, but in South Africa and Canada the market is almost entirely in British hands. In iron and steel tubes the figures for the United Kingdom and Germany are £4,661,000 and £4,383,000 respectively, and there seems no reason why the bulk of the German trade might not be diverted to the United Kingdom; while the same holds good as regards screw nails and bolts, where the corresponding values are £1,201,400 and £1,241,150. In iron and steel plates and sheets (not tinned or galvanised) Germany exports to the extent of £3,523,000, and the United Kingdom to the extent of £2,813,000. The sales of German plates and sheets in the Dutch and Swiss markets are more than ten times, in the Norwegian and Italian markets three times, and in the Rumanian market more than five times as large as the sales of the British-made material. In the other markets the situation is fairly satisfactory. In lace and embroidery German exports in 1912 reached the total of £5,119,700, and exports in the United Kingdom £5,392,100, while Austria's exports were £422,100. It is suggested that of these totals it might be possible to capture £4,890,800. An important opening is available for British development in connexion with iron and steel railway material. Before the war the German exports amounted (apart from rolling stock, wheels, tyres, and axles) to £4,531,200, and the United Kingdom exports to £5,189,600, and it seems possible that some four million pounds' worth of the trade might be diverted to this country. In musical instruments the volume of British exports is £567,200, or about one-seventh of the German output, a considerable proportion of which is sold in British markets. In motor cars and spare parts the German exports for 1912 were £4,113,350, and the United Kingdom exports £3,649,900. The markets in which German interests dominated were in the Netherlands, Belgium, Italy, Rumania, Russia, Brazil, and Argentina, and there are good openings for the expansion of British trade at the expense of German in Scandinavia, the Dutch East Indies, Denmark, Switzerland, Uruguay, and Mexico. The comparative figures for certain other industries are as follows. They are derived from the Bulletins issued by the Commercial Intelligence Branch of the Board of Trade, which deal with several other trades besides those here mentioned. Austrian exports are usually of secondary importance.

	United Kingdom Exports.	German Exports.
	£	£
Iron and steel bars, rods, shapes, and sections	6,380,800	8,299,000
Goldsmiths' and silversmiths' wares and electro-plate	1,243,000	2,847,200
Fertilisers	5,745,500	3,370,400
Medicines (drugs and preparations)	2,351,700	2,444,150
Cables, cordage, twine, nets, &c.	1,267,500	621,500
Heavy chemicals	6,684,900	4,066,600
Cotton yarns	15,006,303	1,545,900
Linen manufactures	9,463,500	1,232,450
Scientific instruments and apparatus (not electrical)	1,833,200	2,285,300
Stationery	2,851,600	2,350,150
Paper, pasteboard, and cardboard	2,758,700	5,272,300
Agricultural machinery	2,989,000	2,531,500
Wooden wares	729,500	1,774,600
Textile machinery	8,281,800	2,030,700
Jute manufactures	5,339,100	180,500
Copper goods	3,006,800	2,663,600
Silk manufactures	1,705,100	9,042,800
Clocks and watches	45,300	1,128,100

SLANG TERMS FOR MONEY.

In addition to the ordinary terms there are others which, although puzzling to a foreigner, are tolerably well understood in this country. In Scotland a man who flies "kites" may not be worth a "bodle," and in England not worth a "mag"—coins which no one ever saw. Such a man will toss you for a "bob." He, of course, would be shunned by the lady who lost a "pony" on last year's "Oaks," and by her husband who lost a "monkey" on the Derby two days before. A gentleman who is worth a "plum" (£100,000) need never be short of "tin," while the outcast who begs a few "coppers," in order to procure a bed generally, has no "blunt." The following words are commonly in use:—

A Tikky = 3*d.*
A Joey = 4*d.*
A Tanner = 6*d.*
A Bob = 1*s.*
A Scotchman = 2*s.*
Half a Bull = 2*s.* 6*d.*
A Bull = 5*s.*
A Dollar = 5*s.*
A Quid = £1.
A Thick'un = £1.
A Jimmy = £1.
A Pony = £25.
A Monkey = £500.
A Kite = An accommodation Bill.
Browns = Copper or bronze.
Tin = Money generally.
Blunt = Silver, or money in general.
Dibs, Money generally. Rhino, Money generally.
Dust, ,, ,, The Ready, ,, ,,
Mopuses, Money generally.
Oof, ,, ,,
Filthy Lucre, Scottish well-worn £1 notes.

War Medals and Decorations.

THE war medal, as we understand it, is only a century old. Waterloo (1815) was the first occasion upon which a medal was issued to officers and rank and file also. The award was not made spontaneously by the Regent or his Ministry. Much petitioning was necessary, the Duke of Wellington in his application putting forth the plea that the medal would have a good effect upon the Army. The medal, which was given to survivors, was of silver, with the head of the Prince Regent on the obverse and a design of Victory on the reverse, and was hung from a ribbon of blue with red edges. The Prussian Waterloo medal had a ribbon of blue, yellow, and blue stripes. From Waterloo, every successful British campaign has been marked by the distribution of a medal, but never since has a medal been struck for one particular battle.

Early Medals and Definition.—Ancient Rome is said by some (experts differ) to have awarded medals in bronze, silver, and gold to her famous soldiers. However, it is not until the fourteenth century that the military medal is really met with. Possibly the division of the spoil amongst the victors was considered sufficient mark for service. The knighthood conferred upon the field of battle, the flag, and war cry may be taken as the precursors of the medal proper. China is said to have had military medals during the Han dynasty (1–100 A.D.). A medal is defined as a piece having no place in the currency struck to commemorate some event or person.

Armada.—The defeat of the Spanish fleet (1588) was made the occasion by Elizabeth of an issue of gold and silver medals. The design gave the medals the name of "Ark in Flood." They were issued with gold and silver rings and chains, with which they were worn. James I. continued the idea. In 1643 Charles I. authorised medals to be given to his followers' if the Commander-in-Chief considered "faithful service in the forlorn hope" to have been rendered. And Cromwell followed with a medal (his shape was oval, not circular) for those who took part in the Dunbar "crowning mercy." Medals were handed to the volunteers in Holland during 1622–3. Gustavus Adolphus of Sweden provided a military medal in 1620.

Prize Money.—For a long period gold medals were given to successful commanders. Parliament decided in 1692 that one-tenth of all naval prize money should be set apart for medals and other awards. But the men did not share in the distributions. It was thought "expedient" to institute a naval medal following Earl Howe's victory of June 1, 1794. Marlborough's wars did not bring him or his warriors medals. The Seven Years' War and that of American Independence were entirely without medals. The first Indian medal (the Deccan) awarded to all ranks dates from 1784.

Naval Medals.—For all naval victories between 1787 and 1815 only 139 medals were conferred by the Government during those years. However, the survivors of Nile and Trafalgar were not permitted to go empty-handed. Two men, Davison and Boulton, whose business was connected with the Navy, found the funds to buy medals for the men. Many years afterwards (1847) Queen Victoria instituted the Naval General Service medal, and had an issue made to the survivors of the glorious years of 1793–1840.

Army.—At the same time, the Peninsular medal made its appearance, and was given to the survivors of the Napoleonic campaign. The ribbon (red, with blue edges) carried twenty-eight clasps, the first being Egypt, 1801. Gold medals had been conferred upon officers taking part in the Peninsular battles, and the Government, on ascertaining that some officers would be entitled to two or three decorations, ordered that for all medals over one a clasp only should be given for those subsequent. Separate medals were struck for Indian battles (1799 onwards), Kaffir (1833–5), and Acre (1840). A star suspended by a rainbow ribbon was issued for the Gwalior (1842) fighting. This star was known by the writer to be worn as late as Sept., 1915, by Private Adams (æt. 93). Medals and grants began to be issued in 1830 for long service and good conduct. Then followed Meritorious Service (1845); Conspicuous Gallantry (Navy), 1854; Distinguished Conduct on the Field, 1854 (ribbon has red, blue, and red stripes).

Order.—War medals are worn on the left breast; for saving life in peace, on the right. Their order from the centre of the breast is first those for bravery (V.C.), then orders of knighthood, British war medals in order of receipt, foreign orders, and foreign war medals. The clasp for the earliest engagement is worn nearest the medal. If a second or third war takes place in a country and a medal and ribbon is in existence for the first, that is adopted usually for the others; holders of the early medal get clasps for the additional battles. The frontier campaigns of India are marked by clasps to one of the four Indian General Service medals.

Ribbons.—The principal medals and ribbons issued for recent campaigns are as follows. The ribbons for the V.C. and other orders will be found earlier in this volume under Orders of Knighthood. (Contraction: s. = stripe.)

Naval General Service (1909)—White, with crimson borders and two crimson s.
Indian Gen. Ser. (1908)—Dark blue, edged green.
Thibet (1903–4)—Purple, edged green and white.
China (1901, 1856–60, 1842)—Yellow, red centre.
Transport (1899–1902)—Red, two black s.
Boer (1899–1902)—
Victoria: Red, blue, orange, blue, red s.
Edward: Green, white, orange s.
Indian Gen. Ser. (1895–1908)—Red, two green s.
African Gen. Ser. (1895–8)—Red and yellow halved.
Sudan (1896)—
British: Yellow and black divided by red s.
Khedive: Yellow, blue, and yellow s.
Ashantee Star (1895)—Yellow, two black s.
Indian Gen. Ser. (1852–95)—Green, red borders.
Matabele (1893)—Four orange and three blue s.
E. and C. Africa (1891–4)—Brown, white, black.
Burmah (1885–7, 1852–3)—Red, two blue s.
Canada (1885)—Light blue with two red s.
Egypt (1882–9)—
British: Blue, white, blue, white, blue s.
Khedive (Star): Blue.
Afghanistan (1878–80)—Green, with red edges.
Kandahar March (Star)—Rainbow.
South Africa (1877–8–9, 1850–3, 1846–7, 1834–5)—Orange, with two wide and two narrow blue s.
Ashantee (1873–4)—Black, yellow, narrow black, yellow, narrow black, yellow, and black s.

GEO. G. SHARP.

Aeronautical Institute of Great Britain.—At a meeting of the Royal Society of Arts in September, presided over by Sir William Ramsay, F.R.S., it was decided to inaugurate "the Aeronautical Institute of Great Britain." Its three principal functions are to be the stimulation of aircraft production, the promotion of aeronautical progress, and aeronautical propaganda.

Air Pressure Changes as Cause of Death.—M. Arnoux has discussed before the French Society of Civil Engineers the cause of deaths produced by the bursting of French 75-mm. and other high-explosive shells. A pocket aneroid, near which a German high-explosive shell had burst less than three metres away, had shown a sudden fall of pressure corresponding to 350 mm. of mercury (about 14 in.). In the case of men sheltered there would be sudden static depression, and death might ensue without wounds. M. Arnoux suggested that under the sudden decrease of pressure the air and carbon dioxide dissolved in the blood would escape as minute gaseous bubbles, and that these, plugging the small arteries, would stop the circulation of the blood.

Alcohol Competitions.—The Russian Government has offered valuable prizes for two competitions, the first to devise methods of utilising spirit or alcohol or their products, and the second to discover new substances for denaturing spirit or alcohol for industrial purposes. Full particulars will be given on application to the Commercial Intelligence Branch of the Board of Trade.

Aldehydes and Plant Growth.—Mr. O. Schreiner and Mr. J. J. Skinner (Bulletin No. 108, U.S. Bureau of Soils) have demonstrated the extremely harmful effects of aldehydes on plant development. It was found that ten parts per million of salicylic aldehyde in distilled water reduced the growth of wheat plants by 31 per cent. compared with the controls, while with 50 parts per million the plants were killed. Similar results were obtained on a large series of plants tested.

Auximones and Plant Growth.—Professor W. B. Bottomley, in the Botanical Section of the British Association, added to his previous statements on the effect of bacterised peat on plant growth. He described how certain substances called auximones appeared to be essential to plant growth, and gave details of a simple test for the auximones dependent on their effect in stimulating the growth of certain scum-forming organisms. He demonstrated also their remarkable influence on the growth of lemna. In the course of a discussion on the paper Professor Marcus Hartog said the meeting would be memorable because of the contribution that Professor Bottomley had made to the problem of the world's food supply. The President of the section, Professor W. H. Lang, held that in Professor Bottomley's work they were on the fringe of a great discovery.

Bacteria in Limestone.—Dr. C. D. Walcott, Secretary of the Smithsonian Institution, reports the discovery of bacteria in limestone collected in Gallatin County, Montana. The limestone is between twenty and thirty million years old, and the bacteria as seen under the microscope consist of cells, and apparently chains of cells, corresponding physically with the cells of micrococci.

Bilharzia Parasite.—Lieutenant-Colonel Leiper has described to the Royal Society of Medicine and to the British Association the life history of the bilharzia. The parasite is one of the plagues of Egypt, and has existed there throughout the history of the country, invading the bladder of those whom it infects. He has shown that its intermediate host is a snail that lives in small waterways and pools, and suggests that by drying these the scourge could be eliminated.

British Association.—The British Association met last year at Manchester, under the Presidency of Professor Arthur Schuster, who took "The Common Aims of Science and Humanity" as the subject of his address. He argued that the utilitarian drum could be beaten too loudly, emphasised the faculty of selection possessed by the man of science, and drew particular attention to the æsthetic pleasure derived from the pursuit of science. He contended that the worship of material success was the seed of the pernicious ambition that had maddened a nation and plunged Europe into war. The addresses delivered by section presidents were as follow:—A. The Construction of the Heavens, Sir F. W. Dyson; B. Economic Methods of Combustion, Professor W. A. Bone; C. Earth Movements, Professor Grenville A. J. Cole; D. The Evolution of the Cell, Professor E. A. Minchin; E. The Importance of Geographical Research, Major H. G. Lyons; F. Economics and the War and After, Professor W. R. Scott; G. Organisation of Engineering and the War, Dr. H. S. Hele-Shaw; H. The Anglo-Egyptian Sudan, Professor Charles G. Seligman; I. The Physiological Importance of Phase Boundaries, Professor W. M. Bayliss; K. Phyletic and Causal Morphology, Professor W. H. Lang; L. Education of Women and Girls, Mrs. Henry Sidgwick; M. Farming and Food Supplies in Time of War, Mr. R. H. Rew. The following discussions were held:—A. Radio-active Elements and the Periodic Law; Spectral Classification of Stars and the Stellar Evolution; Thermionic Emission. B. Flame and Combustion; Smoke and its Prevention; Homogeneous Catalysis. C. and E. Classification of Land Forms; Radio-active Problems in Geology. D. Chromosomes and Heredity. E. and H. Racial Distribution in the Balkans. F. Means for the Promotion of Industrial Harmony; Replacement of Male by Female Labour in Consequence of the War; The Effects of War on Credit Currency and Finance; Industrial Fatigue. H. The Influence of Ancient Egyptian Civilisation on the World's Culture. L. Methods and Content of History as a Subject of School Study; Military Training in Schools; Education of Women in Relation to their Careers; Education and Industry. M. Influence of the War upon the Future of British Agriculture; Economies of Food Production. The remarkable feature of the meeting was the immediate applicability to present conditions of the work in the Economics Section. This year the Association meets at Newcastle-upon-Tyne, under the Presidency of Sir Arthur Evans. The 1917 meeting will be held at Bournemouth.

British Science.—If membership of the great scientific societies is a test of scientific attainment, British Science leads the world. Analysing the lists of the seven great science societies of Russia, the United States, Germany, Austria, England, France, and Italy, England has eight men of science who are members of six or seven of them, while Prussia has six such men. The average number of scientific societies for English members is 4·9, for Prussian members

4·2, and for Germany as a whole 4·0. In mathematics, France leads with five members; in astronomy, the United States with five; in physics, England with five; and in biology, Prussia with five. Britain is the only country represented in each of the sciences, Prussia having no geologist, France no geographer, and the United States no mathematician, chemist, botanist, or biologist. Professor Pickering, who published the analysis in the *Popular Science Monthly*, finds that there are in all 122 members, non-nationals, belonging to one or more of these societies. Three British members belong to all seven—Sir Archibald Geikie, Sir William Ramsay, and Lord Rayleigh.

Brooks Aqueduct, in Alberta, Canada, is the longest aqueduct in the world, carrying anything approaching a comparable amount of water. It is designed to irrigate 440,000 acres, and is the first where the hydrostatic catenary has been adopted for the shape of the water section. The length is 10,500 feet, and the carrying capacity of it 900 cubic feet per second. The total fall is only 4·85 feet in 10,000 feet. The suggestion of using the hydrostatic catenary was due to the assistant chief engineer, Mr. H. B. Muckleston.

Carnivorous Cattle.—Experiments described by Mr. R. Cecil Wood, and undertaken on the suggestion of Sir F. Nicholson, Director of the Madras Fisheries Bureau, have shown that cattle will thrive on a dried fish diet. Two lots of heifers were experimented with, and were fed—the one lot on dried fish, and the other lot on normal diet. Some time was required to induce the animals to eat the fish, but then they ate it readily. After six months the fish-fed heifers showed an increase in weight of 54 lb. per head, as compared with an increase of 70 lb. per head for normally fed animals. Mr. Wood points out that at Nandyal it is the practice to feed cattle kept for displays of strength on mutton; while so long ago as 1853 Sir John Lawes conducted some successful experiments on feeding pigs with dried Newfoundland codfish.

Diesel Engines.—Messrs. Sulzer Brothers, of Winterthur, Switzerland, have constructed what is probably the largest Diesel engine yet successfully built, for Messrs. Harland & Wolff. The engine has six cylinders, and at trials developed 4,500 b.h.p. The box of the cylinders is 750 mm. and the stroke 1,000 mm. Special government of the air and fuel supply enables the engine to be run satisfactorily at low powers.

Divers in Armour.—A remarkable armed diving dress has been invented in the U.S.A. by Mr. Chester E. Macduffee. It consists of a strong aluminium alloy, and in it divers have gone down as much as 35 fathoms. Its weight is about 480 lb., but owing to its great bulk the buoyancy of it is such that lead ballast has to be carried. The sections of it are jointed by means of leather and rubber, there being in all 56 articulations. One of the chief features of the dress is that at no matter what depth the diver breathes air at the ordinary atmospheric pressure. As the diver is entirely enclosed, he has to be provided with mechanical appliances to enable him to do his work under water.

Electrically-driven Battleships.—The *California*, one of the new battleships for the United States Navy, is to be driven by electricity. The estimated cost of it is over one and a half million sterling, but is less than that of the two other sister ships that will be equipped with turbines. The total machinery power will be over 30,000 h.p., and the American Government is making this new experiment because of the success obtained with the experimental navy collier *Jupiter*, built two years ago, that developed electrically 7,000 h.p.

Enteric Fever and Inoculation.—Mr. Tennant, in the House of Commons, on May 4, stated that up till then there had been 963 cases of enteric fever in the British Expeditionary Force, of which 780 had been analysed. 142 cases occurred among fully inoculated, and there were 10 deaths—*i.e.*, a case mortality of 7 per cent. 157 cases occurred among men partially inoculated (one dose of vaccine), and 10 deaths—*i.e.*, a case mortality of 6·36 per cent. 481 cases occurred among the non-inoculated, and 100 deaths—*i.e.*, a case mortality of 20·79 per cent. But 90 per cent of the Expeditionary Force were inoculated, and thus, while among this 90 per cent. there were 299 cases and 20 deaths, among the 10 per cent. non-inoculated there were 481 cases and 100 deaths.

Gas Gangrene.—A satisfactory antidote has been discovered for gas gangrene. In connexion with the researches, a Welsh bacteriologist working at the Pasteur Institute, Miss Mary Davis, deliberately infected herself with the poisonous liquid which would have the same effect as the gas used by the enemy. The antidote discovered by Dr. Taylor, quinine hydrochloride, was applied, and Miss Davis recovered in twenty-four hours. This is the first instance in which the material was used on a human being, and the experiment involved a serious risk of life.

Glassware.—The Glass Research Committee appointed by the Institute of Chemistry to conduct investigations with a view of arriving at suitable formulæ for making glass for different purposes, reported early in 1915. Copies of the formulæ can be obtained on application to the Secretary of the Institute, and a very full abstract of the Report appears in *Nature*, April 15.

Icebergs and Sea Temperatures.—Researches published in Volume X. of the United States Bureau of Standards, and undertaken by the ships *Chester* and *Birmingham* in the North Atlantic in 1912, show that variations in sea temperatures in places away from icebergs are quite as great as those met with near bergs. It was found by them that near icebergs the temperature is more often lowered than raised, but the observers conclude that temperature changes in sea water give no indication as to the proximity of bergs.

Institute of Marine Engineers.—The new buildings of the Institute of Marine Engineers were inaugurated last January by the President, Sir Archibald Denny. In order to encourage the preparation of short memoirs on sea experience, Sir Archibald has placed a sum of money at the disposal of the council to enable the distribution of prizes for the best memoirs sent in.

Mont d'Or Tunnel.—The Mont d'Or Tunnel, which shortens the journey between Frasne and Pontarlier on the way between Paris and Milan, was opened in May. Work on it was started in 1910, and the engineers were frequently hampered by the inflow of water. The length of the tunnel is about 3¾ miles, and the gradient at the Swiss end 11 in 1,000, while at the French end it is 13 in 1,000. A double track has been laid through it.

Obituary.—The following are among the workers of Science who have died during the past twelve months:—Professor W. Grylls Adams, F.R.S., philosopher; M. Emile-Hilaire

Amagat, physicist; Professor A. Arnaud, chemist; Dr. R. Assheton, F.R.S., zoologist; Captain W. E. G. Atkinson, agriculturist (killed in action); Professor Arthur Auwers, astronomer; Mr. F. M. Bailey, botanist; Sir Nathaniel Barnaby, naval architect; Professor Ingram Bywater, Greek scholar; Mr. E. C. Carnt, naval engineer; Dr. A. Celli, professor of hygiene; Dr. Chaillou, bacteriologist (killed in action); Sir A. K. Church, F.R.S., chemist; Sir Thomas Clouston, alienist; Mr. Charles Colson, engineer; Dr. M. W. Crofton, F.R.S., mathematician; Lieut.-Col. D. D. Cunningham, F.R.S., pathologist; Mr. F. V. Dickins, Orientalist; Dr. N. C. Duner, astronomer; Professor Paul Ehrlich, pathologist; M. Jean Henri Fabre, entomologist; Professor B. Fischer, bacteriologist; Sir Sandford Fleming, engineer; Professor Eberhard Fraas, geologist; Professor Campbell Fraser, logician; Professor James Geikie, F.R.S., geologist; Sir William R. Gowers, F.R.S., nervous diseases; Dr. G. B. Guccia, founder of the Circolo Matematico in Palermo; Professor D. T. Gwynne-Vaughan, botanist; Mr. Robert Hammond, electrician; Dr. Philippe Hatt, astronomer; Dr. A. J. Herbertson, geographer; Mr. E. W. H. Holdsworth, biologist; Professor A. W. H. Hubrecht, zoologist; Professor W. H. H. Hudson, mathematician; Lady Huggins, astronomer; Mr. A. C. Hurtzig, engineer; Captain J. W. Jenkinson, embryologist (killed in action); Dr. H. Lewis Jones, medical electrician; Sir John Knox Laughton, historian; Dr. A. S. Lea, F.R.S., physiologist; Dr. J. B. A. Légé, constructor of the first tide-predicting machine; Professor V. B. Lewes, chemist; Professor E. T. Liebermann, chemist; Dr. R. H. Lock, biologist; Professor Friedrich Loeffler, bacteriologist; Professor D. A. Louis, mining engineer, metallurgist, and writer; Lieut.-Col. Edward Lowrie, anæsthetist; Mr. R. Lydekker, F.R.S., geologist and zoologist; Mr. Howard Marsh, surgeon; Mr. Chas. H. Martin, zoologist (killed in action); M. Pierre-Emile Martin, metallurgist; Dr. G. C. M. Mathison, physiologist (died of wounds); Professor Wesley Mills, physiologist; Professor E. A. Minchin, F.R.S., anatomist and zoologist; Dr. C. S. Minot, anatomist; Mr. H. G. J. Moseley, physicist (killed in action); Dr. Hugo Müller, F.R.S., chemist and botanist; Sir James Murray, lexicographer; Mr. F. H. Neville, F.R.S., chemist and physicist; Dr. John Nisbet, forester; Sir Andrew Noble, F.R.S., artillerist; Professor K. S. Olszewski, chemist; Mr. Julius Payer, explorer; Dr. F. S. Pearson, engineer; Sir Owen Roberts, educationalist; Sir Arthur Rücker, F.R.S., physicist; Mr. P. Ruddler, geologist; Dr. W. Sell, F.R.S., chemist; Mr. C. E. P. Spagnoletti, electrician; Dr. Aksel S. Steen, meteorologist; Professor H. W. Lloyd Tanner, F.R.S., mathematician; Sir George Turner, tropical diseases; Professor J. Cook Wilson, mathematician and philosopher; Professor Otto N. Witt, chemist; Lieutenant R. B. Woosman, naturalist (killed in action); Professor P. Zeeman, zoologist, Leyden.

Petrol Railway Car.—The Union Pacific Railway have had built the largest known petrol motor car for railway use. It has a 300-h.p. engine, and can draw an ordinary railway coach as trailer. The car is 70 feet long; the weight on the driving wheels is 33,800 lb., and the pull exerted 82,000 lb. It will seat 78 passengers, and is intended for a service that will involve running a trip of 206 miles daily.

Poison Gases.—The chief poison gases believed to be used by the Germans during the present war are sulphur dioxide, nitrogen tetroxide, chlorine, bromine, and phosgene. Carbon monoxide and cyanogen are quite unsuitable, being so light as to diffuse with great rapidity into the atmosphere. Various substances have been used to neutralise them on respirators, the most successful, perhaps, being ordinary washing soda.

Potash from Waste Products.—Mr. T. C. Gimmingham, of the Horticultural Research Station, Bristol, has drawn attention to the waste of the potash that is essential for agricultural purposes in the sawdust and odds and ends of wood to be derived from saw-mills. The ash of this yields a residue containing 6 to 10 per cent. of potash. Pure wood ash would sell at between 25*s.* and 30*s.* a ton as fertiliser, and he suggests that economy could be effected by burning the wood unmixed with coal and selling the ash for this purpose.

Power for Fishing Boats.—108 steam vessels and 171 motor vessels were added to the Scottish fishing fleets during 1914, but not a single new sailing vessel has been added to the herring industry for several years. The rapidity with which steam and petrol are ousting sail from the fishing industry can be appreciated from the following figures. In 1906 steam vessels caught 31 per cent. of the total catch of herrings, and sail 69 per cent.; whereas in 1914 steam secured 74 per cent., motor vessels 7 per cent., and sailing vessels 19 per cent.

Puymorens Tunnel.—On Christmas Eve of last year the Puymorens Tunnel, on the line across the Pyrenees between Aix-les-Bains and Ripoll, was successfully pierced, the workmen at the time being 3,450 and 1,941 metres from the north and south entrances respectively. It is the chief work on the new railway, and is perfectly straight. The width at the rail level is 4·45 metres, and the height 5½ metres. It is expected that the line will be open for traffic in 1917.

Seed Pressures.—Professor J. B. Butler and Mr. J. M. Sheridan have described to the Royal Society of Dublin an instrument designed to test the pressure that could be exerted by moistened seeds. They found that the swelling force in single broad beans tested amounted to from 28 to 30 atmospheres, while half a dozen peas gave rise to 45 or 50 atmospheres pressure.

Selenium and Electricity.—Mr. A. Campbell Swinton has drawn the attention of the Physical Society to an interesting electrical phenomenon connected with selenium. If an electric cell is made up of zinc and tinned copper, one side of which is coated with selenium while the other is enamelled, in tap water, the zinc is found to be electro-positive to the selenium in the dark, and the effect is increased if the cell is illuminated. If, however, carbon or copper poles are substituted for the zinc, it is found that while selenium is electro-positive to carbon or copper in the dark, it becomes electro-negative to them as soon as it is illuminated.

Serum Treatment for Swine Fever.—The Board of Agriculture has issued a notice to the effect that if proper precautions are taken, immunity from swine fever can be established by serum treatment. The Board are now in a position to offer serum treatment of pigs, free of cost, in the early stages of an outbreak of swine fever, and they wish to impress on all owners that to obtain the best results from this treatment notification of the suspected existence of swine fever on their premises should be made at the earliest possible date.

Sewage Disposal.—In building an automatic sewage station that will be able to deal with 151,000,000 gallons of sewage in the twenty-four hours, the Public Works authorities at Boston, Mass., are thought to be constructing the largest station of the kind in the world. The dimensions of the main sewer are 58 in. by 88 in. Three of the four pumps will each be able to deliver 30,000 gallons a minute, and the fourth 15,000 gallons.

Steam Shovel.—A monster steam shovel, weighing 310 tons, and believed to be the largest in the world, has been built by the Bucyrus Company for the Carney-Cherokee Coal Company. The shovel can excavate 5,800 cubic feet of material in eight hours. Its jib is 75 feet long, and the bucket, or dipper, has a capacity of 6 cubic yards. It is easily convertible into a drag-line excavator, and, if so used, would be equipped with a 175-feet jib and an 8-cubic-yards bucket.

Strong Room Construction.—No strong room has been hitherto constructed comparable with that erected for the Bankers' Trust Company of New York. The strong room has two stories, and the inside measurements are 28 ft. by 30 ft., while the walls are 28 in. thick. They consist of 4 in. specially prepared steel and 2 ft. of rock concrete, steel rails and beams. The entrance door weighs 40 tons, but is so hung that it can be moved by one finger. Apart from two large compartments, the strong room holds 100 safes.

Sunshine of May.—By studying meteorological records Professor W. W. Haldane Gee has found that the month of May enjoys a higher percentage of sunshine, taking the maximum possible into consideration, than any other month in the year. He suggests that this fact must have an important influence on vegetable growths.

Tata Hydro-Electric Scheme.—The Bombay cotton mills began early this year to receive power from the Tata hydro-electric undertaking. The water is derived by the construction of great artificial lakes formed by building huge masonry dams across the Western Ghats. The capacity of the Lonawla lake is 380,000,000 cubic feet, that of the Walwhan lake 2,800,000,000 cubic feet, while the Shirawta lake will hold nearly 7,000,000,000 cubic feet. The electricity is generated at 5,000 volts, and transformed up to 100,000 for transmission to Bombay—that is 43 miles distant. It is delivered to the mills at 6,600 volts.

Telephone Achievement.—The opening of the transcontinental telephone line from New York to San Francisco was celebrated in January this year. The lines are 3,390 miles long, and are carried on 130,000 poles. Four wires in all are used, giving two physical circuits and one phantom circuit. On the day the line was opened there were twelve calls, and the charge for three minutes' conversation is $20.70, or about £4.

Telephone in Surgery.—Sir James Mackenzie Davidson, lecturing to the Medical Society of London last January, drew attention to the improvement in the means of localising bullets or shell fragments in wounds by means of the telephone. The method he recommended was to place a carbon plate on the moistened skin near the part affected, and then to search for the metal fragment with a metal probe. As soon as the metal fragment is touched, it and the carbon plate form the two poles of an electric battery, and a click is heard in the telephone.

Whale Waggons.—Steel waggons, specially constructed for carrying whales, with a capacity of 160,000 lb. (about 71 tons), have been constructed by the Leeds Forge Company. The waggons are to travel short distances near Durban, and, as the ground is very uneven, six-wheeled bogeys have had to be fitted.

Wireless Telephony.—The United States Navy Department has achieved the feat of telephoning wirelessly from Arlington, Virginia, to Mare Island, California, a distance of 2,500 miles. In discussing the experiment, Mr. Godfrey Isaacs has stated that there can be no doubt that after the war it will be practicable to telephone by wireless between England and America. Late in October it was announced that wireless telephonic communication had been successfully effected with the Eiffel Tower *vid* Arlington (Virginia), the conversation being overheard in Honolulu.

Wolf Note.—Musicians have long recognised that with stringed instruments of the violin type there is usually some particular pitch at which it is often impossible to obtain a pure steady tone. An investigation published by Mr. G. W. White before the Philosophical Society of Cambridge shows that the "wolf note," as the note is called, is caused by the impressed string pitch coinciding with the pitch of best resonance of the instrument. Optical methods demonstrate that the vibration curve has a very wide amplitude, and that the unsteadiness of tone is due to a beating of the instrument belly.

Writing Analysed.—Mr. James Drever has contributed to the Royal Society of Edinburgh an analysis of writing, giving comparative studies of the child, the male and female adult, and the mentally deficient. A study of the point pressure shows three well-marked types in the adult—the masculine type, with a definite maximum pressure for each word and increased pressure with increased speed of writing; the feminine type, with several pressure maxima for each word and a decrease of pressure with increased speed of writing; and the clerical type, showing uniformity of pressure. In studying the child it is possible to note where writing ceases to be drawing and becomes language; while it is easy also to differentiate whether writing depends on word impulse or phrase or sentence impulse. Defectives fail to show the characteristic rhythm of adult writing, while alcohol impairs it and breaks it down. The pressure curve of an individual is almost as characteristic as his signature.

X-Rays and Crystal Structure.—A paper submitted by Professor W. H. Bragg and Mr. W. L. Bragg was read before the British Association this year on X-Rays and Crystal Structure. Professor Bragg showed how it was possible by the method to determine the place of the molecules in the crystals, and pointed out that to get the full results from it it was necessary to determine how the atoms lay in the molecules, and to consider both the arrangement of the atoms in the crystalline structure and that of the material in the atoms. Other detailed points to which he referred in the course of his paper were that he had secured improved results as regarded determination of intensities by smoothing down the crystals, and thus getting rid of their normally puckered surface; and that the examination of the sugar crystal had shown that it reflected large quantities of light and must have great concentration of the atoms arranged in planes, like the leaves of a book.

GORDON D. KNOX.

Secondary Education in the United Kingdom (1915).

General.—The general efficiency of national education in all ages has been dependent on, and has consistently varied with, the efficiency of the Universities. The decay of University life was rapidly followed by the decay of elementary and intermediate education. So, in the present day, the Universities are passing through a period of trial, and scarcely more than the shell of the old University life remains, though the normal forms of instruction and of University life are maintained. The outlook is gloomy, as many youths who would normally proceed from the secondary school to the University are now passing into the Army. The University Officers' Training Corps make it possible for boys from a secondary school to matriculate and take up scholarships and combine one year of University life with military training; and with this in view, the headmasters should make every attempt to send boys of seventeen to take up the special facilities offered in this direction. A great number of male teachers have enlisted, thus necessitating the employment of women with University training for the first time in secondary schools. It is apparent that if we wish to supply ourselves and other countries with things which we have hitherto bought from Germany, we must be prepared to spend more money upon our scientific and technical instruction. The need for highly trained men to maintain the industrial supremacy of this country is fully realised by the Board of Education, and they are encouraging development through their inspectors of technical instruction. Not half the children who attend the elementary schools pass through the higher standards, and while the primary system fails according to its own standard, the "ladder" fails equally. The transfers to secondary schools in 1913 were 25 per cent. of what they ought to be on the system as planned. There should be 270,000 children in the secondary schools; in 1913 there were about 150,000. Elementary education cannot give an outfit for life, and it appears that the only remedy is to impose compulsory secondary education on all children over the age of eleven years in all the schools of the country, and to do this would be financially less expensive than the present scholarship system. Mr. Henderson, President of the Board of Education, has issued a letter on enlistment to his "colleagues in the national service of education." He offered his considered opinion that the need now paramount is the need for men of military capacity to augment and maintain the Forces of the Crown, and for the sake of the future, that the fabric of education must be kept in being. He stated that "with a depleted education service, with makeshifts taking the place of the normal organisation, with volunteers from the non-combatant classes taking the places of teachers under arms: we must win this war." He further stated that as far as possible consideration will be given to representations made by the Education Authorities and Governors of Schools and Colleges with a view to deferring the actual embodiment of teachers and members of their staffs whose services in the schools are specially important or specially difficult to replace.

Registration.—It has been announced that up to the end of September the number of applications received is a little over 12,000. Dr. Michael Sadler was elected chairman in the place of Mr. A. D. Acland, and, in his reply to the speeches of welcome, expressed a hope that "the movement towards a closer unity in the teaching profession would receive continued encouragement from teachers of all types, to the end that the Council might take a proper part in the building up of a truly national system of education." In connexion with the list of teachers on war service, it was announced that the returns which had been received showed that up to the end of the summer term of this year 8,270 teachers had withdrawn from school work to undertake service with the forces. This number does not include those officers of the O.T.C. who have remained at their posts at the request of the military authorities in order to continue their work of training officers for the New Army.

Inspection of Secondary Schools.—The Report of the Board of Education for the year 1913–1914 deals very fully with the history and character of the inspection of secondary schools by the State from 1868, when the Schools Inquiry Commissioners declared that "inspection is necessary so as to prevent waste, to secure efficiency, to prepare the way for improvements." With respect to the problem of the future (the relation of inspection and examination), "it appears to the Board that they must continue in the main to be carried out by different bodies, though with the fullest possible knowledge of one another's work, and with some interchange of persons. The Board are, in fact, now negotiating with the different University examining bodies with a view to a fuller co-ordination of the work of each with that of the others, and of all with that of the Board."

Circular 849 of the Board of Education.—This circular was issued in July of last year, following up the report made by the Consultative Committee in December, 1911. It is reported that nearly ninety separate examinations profess to test the proficiency of boys and girls in secondary schools, and the circular is the direct result of urgent appeals made by teachers and the organisations of teachers to be delivered from the chaos of examinations. The circular is put before educationists in outline, and is not final in any way; it invites suggestion, it needs modification in certain essential respects, and it has yet to be elaborated in detail. It is hoped that the scheme will be set going on a sound basis, and that it will not be necessary to wait until it is perfect.

Annual Conferences.—Among the subjects discussed at the various meetings held at the end of 1914 and the beginning of 1915 were votes of sympathy with the schools and universities of Belgium; the reduction of fees by the public schools to those killed in the war; contributions from public schools to the British Red Cross Society. Suggestions were made that steps should be taken to secure that more attention be paid in preparatory schools to practice in reading English books, in learning English poetry by heart, and in English composition. Other important subjects were the questions of the increasing number of History Scholarships offered by the Universities, the effect of History Scholarship Examinations upon the work of the schoolboy, and the proper place of history amongst school studies. A discussion on Circular 849 of the Board of Education was a feature of practically all the meetings of teachers' organisations.

Secondary Schools and the Services.—For many years past the public schools have been steadily setting their house in order in the military sense, and the magnificent results are now seen in the number of young men who are coming forward to serve their country with definite knowledge of drill and discipline acquired in the public schools. The chief cause operating against greater efficiency in the past was that the military authorities had never taken the school corps seriously; but as the number of boys who went to camp increased from four or five hundred in 1898 to two and three thousand in the years 1903 to 1907, the increasing interest of Regular officers and the War Office awoke to the practical value of military training in schools, and gave all cadet units a definite status in the military organisation of the country. The creation of the Officers' Training Corps has become a practical and permanent contribution towards the urgent need of officers, and the State is now reaping the benefit of the regeneration of the last nine years. In a letter to the *Times* on January 28, Lord Methuen, regretting that he could not be present that Session to support a Bill advocating compulsory cadet training, pointed to the work done in this direction in the Dominions, and advocated a measure of training for lads between the ages of twelve and eighteen. National Service was also discussed at the beginning of the year at the meeting of the Teachers' Guild on the duty of every citizen to defend his country, and at the annual meeting of the Association of Headmasters, when a resolution was passed by a substantial majority advocating instruction in the elements of military drill and the use of the rifle for all boys in secondary schools. The Association of Assistant Masters also resolved to support the policy of universal military training in all schools, while safeguarding the interests of conscientious objectors. The subject of military training is receiving earnest attention from Education Committees throughout the country. As the Officers' Training Corps in our public schools have undoubtedly come to stay, and some similar training seems necessary in connexion with county and municipal secondary schools and grammar schools, and for the older scholars in our public elementary schools, it is hoped that the authorities will see their way to introducing the system which has proved so successful in another grade of school.

Sandhurst and Woolwich Tests.—The Civil Service Commissioners announced that there would be no oral or laboratory tests at the competitive examinations held in June for admission to the Royal Military College, Sandhurst, and the Royal Military Academy, Woolwich, the Indian Police Force, Cadetships in the Royal Navy (Special Entry), and Supplementary First Appointments to the Royal Marines.

Officers' Families Fund.—At the beginning of the war, the Headmasters' Conference and the Association of Preparatory Schools offered special terms to the sons of those killed in active service. Offers were also received in considerable numbers from other schools, both for boys and girls; and there were special offers of splendid generosity for the education, free of all charge, of the sons and daughters of officers who have fallen.

Professional Classes War Relief Council.—The work of the Education Committee has, in the main, assisted in the education of children of professional men and women who, without such assistance, would be unable in consequence of the war to keep their children at school, and with schools suffering from loss of pupils. The Council have assisted 183 families in this way, making a total of 273 children (boys 155, and girls 118); 108 children have been sent to boarding schools; and have expended in this way over £3,000.

Public Schools Hospital.—An appeal was sent to headmasters at the end of 1914 by the British Red Cross Society, in response to which masters and boys in public and secondary schools throughout the country have contributed. A sum of over £8,000 has been collected, and the committee to administer the fund have secured, at the recommendation of the British Red Cross Society, Dorchester House, London, as a hospital for wounded officers, in connexion with an operating hospital in the same locality; also, two huts for non-commissioned officers and men, and one for the staff, have been acquired at the Netley Hut Hospital of the British Red Cross Society. The cost of equipping and maintaining the two sections for twelve months is estimated at over £10,000. In the event of the early termination of the war, the committee would consider a scheme whereby any balance of the fund would be devoted to helping soldiers and sailors incapacitated from returning to civil life.

AVERAGE WEEKLY EARNINGS OF RAILWAY SERVANTS.

The following table shows the *average wages per head* of workpeople employed in the coaching, goods, locomotive and engineer's departments of the 27 principal Railway Companies of the United Kingdom during the first or second week in December in each of the years 1907-1913. The Companies included in the table employ over 90 per cent. of the total number of Railway servants.

After the war more importance will attach to every improvement in National Education. The country which best applies the resources of science to trade and industry, and organises upon the soundest, widest, and most progressive lines, will forge ahead of other commercial competitors.

At the annual meeting in 1914 of the Head Masters' Conference, a resolution was passed that the provision of scholarships and exhibitions to enable students of slender means to enter and complete their courses in Universities and other places of higher education was very inadequate; and they welcomed the announcement that the "consultative committee had been requested by the Board of Education to consider what measures are necessary and practicable for developing a system of such scholarships and exhibitions in organic relation to a system of National Education."

The scholarships and exhibitions awarded by the Public Schools chiefly call for a knowledge of Classics, Mathematics, Modern Languages, Science, or Music, and are of more interest to those entering the professions than to those intended for commercial careers.

Preliminary training is imperative for the Royal Navy, Army, Merchant Service, Church, Law, Medicine, Music, Engineering, Architecture, Accountancy, &c.; and the different examinations indicate the necessary qualifications.

In the Civil Service situations are filled by (*a*) open competitive examinations, (*b*) competition after having obtained nomination, (*c*) nomination with a qualifying examination.

Every boy requires a sound general education, no matter what business he is intended for or may adopt. Specialisation at too early a stage at the expense of the general education must be avoided, but in too many cases a boy's schooling finishes without anything having been settled as to the business opening he shall try for.

To ensure a boy being provided with an educational outfit suitable for a particular business, *Commercial Service Scholarships* should be established. Under such a system those who are going for a business career would specialise before they leave school in the same way as is now done for the professions.

In connexion with business openings, it is impossible to define off-hand a course of study and training which ought to be followed in each case. In addition to *Banking and Insurance, Manufacturers, Merchants and Retailers, Railways, Shipping and Transport, Printing, Publishing and Advertising*, there are a number of special trades and agencies. It is, therefore, an easier matter for the head of a firm to indicate what, in his opinion, a boy at school had better concentrate upon, to render himself of the most value to his firm in the quickest time after having obtained an opening with them in the form of a Commercial Service Scholarship offered by the firm.

It might be of interest here to refer to what is now being done to keep our merchant service supplied with junior officers.

Many of the large steamship companies take cadets from the *Worcester* as apprentices without premium; the P. and O., Royal Mail, British India, &c., take them direct from the *Worcester* as supernumerary officers. The future of the cadets upon the *Medway* and *Port Jackson* (ocean training ships) is secured by arrangements with well-known shipping lines who give preference to boys so trained.

The P. and O. has established a system of cadetships, applicable only to selected boys trained on the *Worcester*, which enables boys to adopt the sea as a career who would otherwise be prevented owing to insufficient funds.

The P. and O. pay one-half of the *Worcester* fees for three years, and the premium upon a sailing vessel; or the boys can enter the company's service direct as apprentices without payment of any premium.

The establishment of Commercial Service Scholarships upon a national basis would supply definite openings for which boys could be trained.

This would increase the usefulness of those agencies which are now promoting commercial education, and the practical development of existing school courses would be facilitated.

The list of the City Companies covers most branches of trade and commerce, and a scheme for Commercial Service Scholarships ought to be organised which would command their support.

The University of London award School Commercial Certificates when the pupil leaves school to candidates who have completed their sixteenth year and who pass their examination.

The London Chamber of Commerce also hold their own examinations and issue Senior Commercial Certificates and Junior Commercial Certificates; the value of such certificates would be increased if business openings were arranged for under a comprehensive scheme of Commercial Service Scholarships.

The future interests of the country will demand the inclusion in the Government of men of business, and the appointment of a Minister of Commerce will follow.

Our Public Schools must cease to look down upon business. The upper classes will have to gravitate more and more to trade, and business will become elevated to a career for which boys will be specially prepared at schools.

The extension of our national trade will prove to be of supreme importance to counteract the effects of the war; the best brains of the community will be required to compete successfully against the well-trained intellects and highly organised industrial institutions of other countries.

Our Universities ought, therefore, to inaugurate a special course and degree for *Commerce*.

The Board of Education should appoint a Department—

(*a*) To co-operate with Chambers of Commerce and trade institutions to secure an adequate supply of Commercial Service scholarships, embracing in a general way the interests of the business world.

(*b*) To arrange for examinations and the issuing of certificates to all who qualify, irrespective of their obtaining at the time one of the openings competed for.

(*c*) To ascertain from the Foreign Office and Board of Trade in what industries greater efforts are required for expansion or consolidation; and to secure from those branches of trade concerned an extra number of Commercial Service Scholarships.

With these objects in view the plan for the organisation of Commercial Service Scholarships should be drafted by a small joint committee appointed by the Board of Education, the Head Masters' Conference, and the London Chamber of Commerce.

Trade Unions.

At the end of 1914 the total membership of the 1,123 registered and unregistered Trade Unions known to the Department was 3,959,863, showing an increase of 0·8 per cent. on the previous year, when the figure attained (3,928,191) was greatly in excess of any previously recorded.

The membership by trades and the percentage increase or decrease in each trade compared with a year ago are shown in the following table :—

Groups of Trades.	No. of Unions at end of 1914.	Membership at end of 1914.	Percentage Increase (+) or Decrease (−) in Membership compared with 1913.
Building :

Other Trades	202	167,329	+ 1·5
General Labour	14	366,539	+ 10·7
Employees of Public Authorities	82	150,295	+ 3·9
Total	1,123	3,959,863	+ 0·8

In no group of trades was the rate of increase so great in 1914 as in 1913, and in several groups there was a decline in membership. The general labour group heads the list of increases with 35,000, or 10·7 per cent. ; but this increase was entirely due to the growth of one union—the Workers' Union—which advanced in membership from 91,000 to 159,600 ; in 1910 this union had only 5,000 members. Trade Unions in the engineering industry show an increase of 25,000 members, or 9·1 per cent. On the other hand, the membership of unions of builders' labourers, of iron and steel workers, and of textile dyers, &c., decreased by 9,000 (or 23·0 per cent.), 9,000 (or 10·7 per cent.), and 10,000 (or 14·1 per cent.) respectively.

The total membership of all Trade Unions in 1914 increased by 65·1 per cent. compared with 1910, and by 172·7 per cent. compared with 1895, when the membership was lower than in any other year of the period 1892–1914 for which the Department has comparable statistics.

In the building trades group the membership in 1914 was below that recorded in 1913, but, with this exception, was higher than in any year since 1903. The membership of this group reached a maximum in 1900 (254,142), and then fell continuously to 156,985 in 1910, between which year and 1913 it recovered somewhat rapidly.

In the mining, textile, and clothing groups the membership in 1914 was only once exceeded—in 1913. That of the dock, canal, and riverside labour group was exceeded in 1913 and in 1911, but in no other year. In the remaining groups

specified in the above table the membership in 1914 was the largest recorded.

The total membership was inclusive of females, who numbered 352,944 in 1914, compared with 357,783 in 1913 (a decrease of 1·4 per cent.), and with 221,915 in 1910 (an increase of 59·0 per cent.). Over 70 per cent. (249,022) of the total female membership were engaged in the textile trades, the cotton industry alone accounting for 205,904, or nearly 60 per cent. of the whole.

The following table shows the figures in the main groups of trades for each of the five years 1910–1914 : –

Groups of Trades.	1910.	1911.	1912.	1913.	1914.
Building	156,985	173,182	203,773	247,685	236,524

Federations of Trade Unions and Trades Councils.

The number of Federations of Trade Unions in existence at the end of 1914 was 119, with a gross membership of 4,791,950—an increase of 8·2 per cent. compared with 1910.

The number of Trades Councils was 302. Their affiliated membership was 1,588,386—an increase of 5·2 per cent. compared with 1913, and of 56·5 per cent. compared with 1910.

BREWING AND DISTILLING STATISTICS (U.K.), 1903–1913.

Labour and the War.

HAD the Cabinet insisted upon the Trade Union Congress which was arranged to have taken place in September, 1914, and was postponed on account of hostilities, to meet in the ordinary course, sent an authoritative delegation to address the members and to ask for not less than 3,000,000 men for war service—2,000,000 for the fighting line, and 1,000,000 for munition and other purposes—this critical chronicle might not have had to be recorded. But twelve months elapsed before the Ministry took Labour into its confidence. Then Labour gave the only answer, the putting into practice of which is now (Oct., 1915) taking place.

Labour's Attitude.—The ranks of organised Labour closed up immediately the war began, and the subsequent outrages committed by the Germans brought all men into line. All the wonderful resolutions of many congresses, that in the event of war being declared by any of the Great Powers the working men in the countries concerned would cease work until a peaceful means of settlement could be found, were of no avail. "The country of my birth, whether right or wrong," was the individual attitude of 99 per cent. of the Trade Union, Labour, and Socialist movements. The remaining 1 per cent. separated itself into Stop the War and other committees, including the Union of Democratic Control (in process of formation September, 1914), which, whether possessing the deliberate intention or no, have had the effect of producing and influencing disintegration, when the whole nation should have thought as one. The Socialist, who was the *soi-disant* guide, philosopher, and friend of the trade unions, allied himself freely with those anti-national concerns. Officials of the I.L.P. have been working hand in hand with them, and even the patriotic B.S.P. has had some defaulters. It has not been, and is not, the time for "class antagonism." The speedier the victory, the less will be the number killed and the more available for the "class struggle." An attempt to prosecute the I.L.P. was hardly successful.

Strikes.—Although the leaders of the Trade Union Congress, the General Federation of Trade Unions, and the Labour Party met in Aug., 1914, and decided to make an immediate effort to terminate all strikes and prevent any points of difficulty, disputes have been common. The actual number of strikes would not have been abnormal for an ordinary year. During the first eight months of 1915 there were 459 strikes, involving 370,887 men, and causing a stoppage of work equivalent to 2,438,400 days. The miners, the largest of all sections of Labour, have been foremost. There is a redeeming feature in the number of miners who have enlisted.

Miners.—In Feb., 1915, a dispute arose between 120 colliery companies and the 40,000 miners of the West Yorkshire coalfield. After much public argument, the employers made a concession for the period of the war. March saw trouble in South Wales in respect to a 10 per cent. advance to meet the increased cost of living. In April the Miners' Federation of Great Britain was pressing home the demand for a 20 per cent. increase in wage rates. By this time the South Wales miners were calling for a national strike. On May 3 the Congress of Miners decided by a majority vote of 159,000 in a total vote of 717,000 to leave the question of settlement in the hands of Mr. Asquith. The South Wales Federation held a special meeting on June 15 to express "astonishment and dissatisfaction with the refusal of the coalowners to negotiate during the period of the war for a new agreement." Conferences took place under the auspices of the Board of Trade upon the crisis in South Wales at the end of June and beginning of July. On July 12 the delegates rejected the terms of settlement arranged by the Government. Mr. Lloyd George had to go to Cardiff on July 22 and stop a strike which had been forbidden by Proclamation of the Cabinet nine days earlier. The terms were not accepted until Sept. 1. The number of miners involved in the disputes during Jan.–Aug., 1915, was only 2 per cent. less than for the same months of 1914.

Other War Trades.—During Feb., 1915, 10,000 engineers employed in the yards on the Clyde stopped work, in spite of the advice tendered by their leaders. The Government ordered the strikers back to work. The engineering trades disputes during 1915 have resulted in an average loss of 25,000 working days per month—a most unsatisfactory figure. A regiment of transport workers was raised by Lord Derby at Liverpool to deal effectually with delay caused by possible strikes. Several strikes have occurred amongst the textile workers. The London tramway men dislocated business in an ineffectual strike to force better conditions from the L.C.C. Several prosecutions have taken place under the Munitions of War Act in the case of men who deliberately refused to carry out their engagements. The railway servants have worked loyally.

War Service.—Labour's attitude towards compulsory military service was voiced in a speech by Mr. J. H. Thomas in the House of Commons on Sept. 17, 1915. He stated: "On the day conscription is introduced the Government will be compelled to deal, not with compulsory service, but probably, and unfortunately, with industrial revolution." The Trade Union Congress (Sept., 1915), whilst against conscription, supported the policy of the continuation of the war until a successful conclusion was obtained. On Oct. 1 the leaders of the various Labour bodies met in private conference to hear speeches from the Prime Minister and the Secretary of State for War. They came to the conclusion that compulsion was not necessary, but they agreed to begin an active recruiting campaign throughout the United Kingdom. On Sept. 9 Mr. Lloyd George addressed the Trade Union Congress, and informed the delegates that he wanted 80,000 skilled and 250,000 unskilled workmen for munition work, and two weeks later he saw the leaders again on the question of munitions.

Trade Unionism.—The membership of the trade unions has been maintained. The last available figures (Dec. 31, 1914) show a following of 3,950,863, or 22,672 more than twelve months earlier. It is understood there has not been any falling off during 1915. It was feared that the war would lead to much unemployment, Parliament making a special grant to the trade unions for meeting the cost of out-of-work benefit. The very opposite has taken place.

GEO. G. SHARP.

EVEN in the dullest of dog days, a scheme for the establishment of a dye-manufacturing industry under national auspices would be hardly likely to raise the slightest enthusiasm except of the experts. Hence the lack of general interest during the excitement created by the war when the Government was induced to carry through a proposal for the formation of a national dye-works. It may be official reticence, which has become a questionable attribute of official labours, had something to do with the public's neglect of the scheme. Germany had made the dyeing industry her own. The capital invested in her factories was £20,000,000. Besides, she had evolved the business scientist.

Government Committee.—In Sept., 1914, a small committee was appointed by the Government to consider and investigate the straits in which the United Kingdom was placed by being cut off from supplies of dyeing material. It was discovered England bought £2,000,000 worth of dyes yearly in connexion with an outlay of one hundred times more, and employed directly and indirectly 1,500,000 persons in using the dyes. Of these dyes, less than one-tenth were manufactured here. The remainder came from Germany. Lord Moulton, who presided over the committee, became the Government's spokesman, and introduced the scheme proposed by the committee to the dye users of the North. The plan was the raising of a capital of £3,000,000 for a national dye-works, with a Government debenture of £1,500,000.

First Failure.—A determined attempt was made to kill the scheme. The Germans, who had the most to lose from the adoption of the proposals, worked hard through their agents to scotch the idea. The committee appointed by the users of dyes in November met at the Board of Trade on Jan. 21, 1915, when two members withdrew. A larger committee was got together and set about the formation of a new scheme.

Scheme No. 2.—On Jan. 29 the Board of Trade issued the revised plan. The new company was to be formed with a share capital of £2,000,000, of which half was to be issued at first. In addition, the Government agreed to advance, up to £1,000,000, the equivalent of the capital subscribed for a period of 25 years at 4 per cent., payable only under certain conditions. Further, a grant of £100,000, spread over ten years was promised for research work. The Government was to have the power of nominating two directors. Options had been obtained upon existing dye-producing establishments, and satisfactory arrangements made with important producers in Switzerland. Subsequently a series of meetings was held in Yorkshire to discuss the proposed company. Opposition had to be faced, and there was an insistent demand for the guarantee of a protective duty.

Co-operation.—On Feb. 12 the Board of Trade issued an explanatory statement. *Inter alia*, the State was to advance £1,000,000 immediately 5*s.* in the pound had been paid up by the trades subscribing the £1,000,000 capital. Swiss manufacturers were to supply £500,000 of essentials per annum for five years. The scheme was to be co-operative. Dyers and manufacturers were invited to take part in the formation of the company, whilst the users of dyes would secure for themselves the preference in the available supply, and be required to accept from the company such dyes as it was able to produce. Resolutions in favour of the movement were carried at important meetings of dye users. At the same time declarations were made of the need of chemical research.

British Dyes, Limited.—The aniline dye scheme came before the House of Commons on Feb. 22. The last meeting was held at the Board of Trade on Mar. 2 to consider the prospectus of the new company in its final stage. It was anticipated promises of support would result in subscriptions to the extent of £500,000. The prospectus was made public on Mar. 8, but the general investor was not encouraged to assist. The capital was £1,000,000 in £1 shares, of which two-fifths were stated to have been subscribed prior to the issue of the prospectus. The amount of the Government's loan was given as £1,000,000. The lists closed on Mar. 12.

Further Consideration.—In the meantime, Mr. Runciman (President of the Board of Trade) said in the House of Commons he did not think it expedient in the public interest to give details of how the German dyes and other commodities for which licences to trade had been granted were being imported into the United Kingdom. On Mar. 11 Mr. Handel Booth called attention in the House to the prospectus, and was supported by members who criticised it. On Mar. 24 a meeting was held to consider the situation which had arisen from the failure to raise sufficient capital to secure the Government's aid. There had been only 880 subscribers for £571,000, of which £83,000 was offered conditionally. The directors were doubtful of proceeding to allotment. Only £11,000 had been subscribed by the public. The Vice-Chairman (Mr. Falconer, M.P.) stated that two of the largest dye consumers had not put up any money, whilst another big firm had applied conditionally. A further £200,000 was necessary for the establishment of the company. The discussion resulted in the removal of the restriction upon users, and the consequent approval in the formation of the company.

More Subscriptions.—A further appeal for capital amongst dye-using establishments resulted in new subscriptions totalling £156,000, two large firms now giving full adherence. On April 24 the Board of Trade announced the decision of the new company to buy the business of Messrs. Read, Holliday & Co. On May 7 Mr. Falconer, M.P., was appointed Chairman, but the Government refused to permit the House to debate the appointment.

At Work.—The statutory meeting on July 13 disclosed that 656,099 shares had been allotted, and in respect to them £163,799 had been received; £389,068 had been spent on purchases; preliminary expenses had taken £8,953. The Government's loan was given as £854,550. The Chairman stated the output of the premises taken had been doubled, and the company was looking for a site upon which to erect a factory. On the other hand, the Chairman of the Calico Printers' Association informed his shareholders on Sept. 22 that British makers were able to supply only a small quantity of the colours required. On Oct. 8 representatives of dyeing establishments met in Manchester with the object of accelerating the supply of dyes. The Government does not appreciate any attempts to discuss the British Dyes, Ltd., by M.P.'s.

Russian Contemporary.—M. Tschernytchoff, of Moscow, has announced the establishment of a similar company in Russia. Assurances of cordial co-operation between the companies have been exchanged. GEO. G. SHARP.

THE development of aviation in the past year has been indissolubly bound up with the war, and for reasons connected with the Censorship, which forbids the publication of information which may be of use to the enemy, it is impossible to discuss the subject in more than general terms. Details of construction by means of which progress has been made cannot be dealt with. Neither can strategy or tactics, either offensive or defensive, be particularised for the same obvious reasons. But there are several officially published facts which may be placed on record. The year which has passed has seen a most marvellous development in the science of aviation, one which a few years ago would have been considered outside the bounds of possibility, and only conceivable in the imagination of the writer of fiction.

The most notable feature has been the use of aircraft for reconnaissances and the direction of gun-fire. Over and over again the British Commander-in-Chief in Flanders has directed attention to the services of his aviators, and the ascendancy which, by their daring and skill, they have obtained over those of the enemy. Then we have seen the vision of the poet almost realised—"aerial navies grappling in the central blue." At all events, there have been innumerable duels in the air, ending often in one of the combatants being shot and dashed to earth. Again, squadrons of aeroplanes have been utilised to bomb the enemy's lines of communications, to wreck railway lines, and blow up ammunition depôts. Raids have been made on submarine bases such as Zeebrugge; airship sheds have been destroyed as far off as Dusseldorf and Brussels; towns in Württemberg and Rhenish Prussia have been attacked in reprisal for Zeppelin raids made at night on defenceless towns—in fact, the aeroplane section has become the Fifth Arm of the Army. Even in the Mediterranean and in South Africa aircraft have performed no mean part in the operations of the war. It is all so new and strange, and yet all these wonderful exploits have soon become the commonplaces of the great Armageddon which is shaking the foundations of the civilised world.

Although the Allies have utilised a few dirigible airships, they have pinned their faith to the aeroplane as a fighting force. On the contrary, Germany, with a confidence almost pathetic, has continued to build and improve the Zeppelin type of airship, despite its vulnerability, expense, and need of huge and safe bases. The longer range of action and the ability to carry more explosives are its two advantages, but except in "frightfulness" by means of night raids it cannot compare with the aeroplane, whose mobility and speed render it useful in any sphere of action. So the Air Service has been highly developed both by Great Britain and France, and has rendered the greatest help in the conduct of the war. How the Flying Corps is being enlarged and reorganised both in the matter of numbers and *personnel* it would be indiscreet to particularise, except to allude to the fact that a new type of battle-plane has been evolved both by the Allies and the enemy. These battle-planes carry guns and a crew. The German type, according to the American newspapers, has a span of 70 feet, and three superposed planes rising to a height of 20 feet. Their armament consists of four 1½-inch guns.

At the time of writing the Eastern Counties and the London district have had many visits from Zeppelins. A good deal of material damage was done, and a number of civilians killed and injured, but from a military standpoint these raids have been quite useless. In order to cope with these nocturnal visitors, the Government last September began the reorganisation of the air defences of the metropolis and Eastern Counties, and the command was given to Admiral Sir Percy Scott, whose great experience in gunnery pointed to him as the man for the task. Of the scheme of defence and the nature of the anti-aircraft guns it is not permissible to write.

The most notable exploit by an aviator during the year was the single-handed destruction of a Zeppelin on June 7 by Flight-Sub-Lieutenant R. A. J. Warneford, R.N., who attacked the monster at a height of 6,000 feet in the air between Ghent and Brussels. Rising above the Zeppelin, he dropped six bombs on it. The airship exploded and fell, and the force of the explosion was so great that Warneford's Morane monoplane was blown completely over in an involuntary "loop." Warneford, however, righted his machine and got back to his base in Flanders, only to succumb a month or so later in an accident in Paris. He was the first airman to be awarded the Victoria Cross. No reliable data as to the number of Zeppelins destroyed during the war are available, but it is certain that quite a number met their fate. Two were blown down in the North Sea. One or two were burned in their sheds; and the Russians captured one, with its crew, in the Gulf of Riga. One was brought down by French artillery in August. In all, about 12 or 15 Zeppelins have been put out of action since the war began to the end of October last. The output from Friedrichshafen has, however, kept pace with the wastage.

The following is a list of Zeppelin raids, with the numbers of those killed and injured:—

	Killed.	Injd.
Jan. 19.—Yarmouth and district	4	9
Feb. 21.—Colchester and district	—	—
April 14.—Tyneside	—	2
April 15.—Lowestoft and East Coast	—	—

Oct. 13.—London area and Eastern Counties	56*	114†

* 15 soldiers. † 13 soldiers.

One new record deserves mention—that of altitude. On Sept. 7 the Swiss aviator Andemars ascended to a height of 19,800 feet, beating the previous record of 18,630 feet made by Legagneux.

SPORT in its usually accepted sense was in the past year almost a dead letter. The graver issues of war, which only began to be realised in the spring of 1915, led to the suspension or abandonment of most of the organised pastimes, both because athletes and sportsmen were otherwise engaged, and also because it was felt that mere games were out of the question whilst the Empire was in the midst of a struggle for its very existence. The purely amateur sports, such as Rugby football, golf, hockey, polo, and athletics were abandoned early. Professional Association football lingered on till the end of the season, and horse-racing was carried out in a modified form. It would be impossible to give anything like a list of well-known sportsmen who lost their lives for their country—the roll would be of such a length as to horrify. It is merely sufficient to record the fact that from every class, the highest to the lowest, amateur and professional, sportsmen were ready and willing to sacrifice themselves. From public schools and universities, from the mill and the shop, from the office desk and the law courts, they thronged in their thousands. Their names will remain indelibly written on the scroll of fame.

ATHLETICS.

ATHLETICS were confined to military events, the championships being abandoned. There were numerous sports meetings for soldiers, and it is computed that over 10,000 men took part in them. No fewer than 700 soldiers competed in the great Army race at Aldershot over a distance of 7 miles early in the year. This was won by Bombardier Dance, of the 51st Brigade R.F.A. Dance, previous to enlisting, was a well-known runner, and a member of the Blaydon Harriers. The Military Walking Marathon (25½ miles) was won by Gunner E. V. Joslin in 4 hrs. 12 min. 14⅘ secs., the course being from Windsor to Fulham Baths.

BILLIARDS.

BILLIARDS was the only game which flourished during 1915. There was no contest for the Championship, which remains with Melbourne Inman, but the London Tournament, slightly modified, was carried through, each player competing twice with every other player in games of 4,000 up on handicap terms. The tournament was won by W. Smith, of Darlington (rec. 300), who won 9 of his 10 matches, losing only 1. T. Newman (rec. 300) was second with 8 wins and 2 losses. Then came H. W. Stevenson (scratch), won 5, lost 5; George Gray (scratch), won 4, lost 6; T. Reece (scratch), won 3, lost 7; and E. J. Diggle (rec. 500), won 1, lost 9. The two younger players, Newman and Smith, continued to show marked improvement, but in a level match of 16,000 up between the pair Newman was decidedly the superior, winning by 1,051 points. Inman, who came back from Australia in the middle of the season, twice beat Gray, in matches of 18,000 up, but failed to concede 2,250 points to Newman, who won by 6,493. Inman had previously beaten Newman, when conceding 2,000 start. Gray was also beaten by H. W. Stevenson by 1,244, and it is quite evident that losing hazard play such as Gray affects cannot cope with the all-round and top of the table game. Gray, however, made a break of 1,134 with ivory balls, thereby beating his previous best of 1,046. Stevenson was in capital form during the season, and when playing Falkiner made a break of 873. Later he made one of 994 when playing Inman, whom he beat by 286 in 18,000 up.

The Championship of the Amateur Billiard Association (England) was won by A. W. T. Good, who beat G. A. Heginbottom. The United Kingdom Championship was competed for by the champions of the four countries, A. W. T. Good (England), A. Croneen (Scotland), J. Nugent (Ireland), and J. Cable (Wales). Past champions in H. C. Virr and Major Fleming did not compete. The final was contested by Good and Nugent, the former winning by 284 in 3,000 up.

FOOTBALL.

RUGBY football was a dead letter, but the Football Association persisted in carrying out the season's programme with the exception of the Internationals. The English Cup, the final tie of which was played at Manchester, was won by Sheffield United, who defeated Chelsea by three goals to nil. This is the third win for Sheffield United, who previously carried off the trophy in 1889 and 1902. The two clubs beaten in the semi-finals were Bolton Wanderers and Everton. Only 50,000 people witnessed the final, the receipts of the gate being £4,012. In the Amateur Cup competition, the final tie was won by Clapton, who beat the holders, Bishop Auckland, by one goal to nil. The Football League competitions resulted as follows:—First Division—Everton, first with 46 points; Oldham Athletic, second with 45 points; Chelsea and Tottenham Hotspur finished at the bottom of the table. Second Division—Derby County, first with 53 points; Preston, second with 50 points; Leicester Fosse and Glossop were at the bottom. Southern League—Watford, first with 52 points; Reading, second with 49 points. For the current season all professional competitions have been abandoned, but three combinations of what were League clubs have been formed—the Lancashire, Midlands, and London. These clubs are playing Saturday matches, the teams for the most part being composed of military footballers. In Scotland, Saturday matches are being played, professionals being allowed to accept £1 a match on the condition that they are employed in ordinary work on other days of the week.

SWIMMING.

NO swimming championships were competed for. Early in the year the Amateur Swimming Association met in London, and decided to abandon the Senior Championships, and to suspend meetings till 1916. The following records were passed by the Association:—150 Yards Back Swimming, G. N. Webster, Sowerby Bridge, 1 min. 54⅘ secs., at Hyde, Aug. 18, 1914; 150 Yards Ladies, Miss Daisy Curwen, Westminster Ladies', 1 min. 58 secs., Liverpool, Sept. 2, 1914; 440 Yards Ladies, Miss Vera Neave, Enfield Ladies', 6 min. 57⅘ sec., London, Oct. 15, 1914; 220 Yards Ladies, Miss Daisy Curwen, 3 min. 8 sec., Birkenhead, Oct. 26, 1914; 200 Yards Breast Stroke, P. Courtman, Old Trafford S.C., 2 min. 41 secs., Liverpool, July 28, 1914. On Dec. 19, 1914, Duke Paoa Kohanamoku, at Sydney (N.S.W.), created a world's record by winning the 100 Yards Championship in 53⅘ secs. All these records are subject to confirmation by the Fédération Internationale de Natation Amateur, and are therefore not included in the tabulated records.

THE TURF.

THE racing season of 1915 was considerably curtailed. The campaign pursued its normal course until the middle of May, when, as the outcome of conferences between the Stewards

of the Jockey Club and the Board of Trade, the former issued a pronouncement that no meetings other than those at Newmarket would be held under their rules until further notice. It is well to point out that the decision was in no way due to reasons of sentiment. Indeed, it was generally recognised that the great industry of horse-breeding was seriously hit by the pronouncement, and that a vast number of people dependent for a livelihood upon horse-racing and its allied industries were called upon to face hardship and privation. The King continued to run horses at Newmarket, as did practically all the foremost owners of blood-stock. But the Board of Trade had satisfied itself that the customary racing programme could not be carried out without interfering with railway facilities for the continuous moving of troops, war stores, and materials. On those representations the Stewards of the Jockey Club had no option but to act as they did; though, somewhat strange to relate, no interference was made with racing in Ireland—a circumstance that led to adverse comment, largely influenced by political considerations.

The new order of things was drastic; it led to the abandonment of some of the biggest events of the year. The Derby, the Oaks, and the St. Leger, as we had known them, disappeared. A "New" Derby and a "New" Oaks were decided at Newmarket, and as the entry was confined to animals that would have been qualified to run under the old state of affairs, and the conditions, excepting that the monetary value of the races was reduced, were identical, the turf world unanimously agreed to regard the continuity of those classic events as unbroken. With the St. Leger it was different. The Doncaster authorities objected to a St. Leger being decided anywhere but over the usual course. A September Stakes, with conditions similar to those governing the Doncaster race, was decided at Newmarket, but as the entry was not restricted to animals qualified for the St. Leger the event was not quite the same. However, Pommern followed up Two Thousand and Derby victories by winning the September Stakes, and was at once hailed as another "winner of the triple crown." The matter is one that admits of argument, and will doubtless provoke plenty in years to come. Some of the Ascot and Goodwood features were introduced into Newmarket programmes, reference to which occurs later on.

The season proper opened at Lincoln on March 22, the first big event, the Lincolnshire Handicap (£902) being won by Mr. F. Straker's View Law, ridden by P. Jones, two days later. Reference to this and other big handicaps will be found in the tabulated matter elsewhere, so that the remainder of this retrospect will be confined chiefly to the classic and weight-for-age events.

Starting, as usual, with the three-year-old colts, Mr. Sol Joel's b. c. Pommern, by Polymelus—Merry Agnes, stands out as decidedly the best of his year. He retired into winter quarters the previous season the winner of two races out of four—the Imperial produce Stakes at Kempton in October, when Snow Marten was amongst the beaten, and the Richmond Stakes at Goodwood. He scarcely made a flattering three-year-old *début*, for in the Craven Stakes (£505) at Newmarket, in April, when starting at evens, he was beaten three-quarters of a length by Rossendale. The winner was in receipt of 15 lb., however, and it is probable that the five furlongs course was not far enough to permit the favourite showing his best. Anyway, in the Two Thousand Guineas (£7,100), on April 28, Pommern, again starting favourite in a field of sixteen, won by three lengths from Mr. L. Neumann's b. c. Tournament, Lord Carnarvon's b. c. The Vizier being a head further away, with Rossendale amongst the beaten lot. On that occasion the crack jockey, S. Donoghue, had the mount. Pommern's next outing was in the "New" Derby, at Newmarket, on June 15. Although Lord Derby generously added £1,000 to the event, the value to the winner was only £2,400, eighteen entries being made. Seventeen of them went to the post, the short price of 11 to 10 being accepted about Mr. Joel's colt, with 10 to 1 bar one betted. Once more Pommern, again ridden by Donoghue, won like a racehorse, Col. Hall Walker's b. c. Let Fly finishing two lengths behind him, with Rossendale, who started at 40 to 1, another three lengths in the rear. Then came the September Stakes £1,250), over the last mile and three-quarters of the Cesarewitch course, on Sept. 15. Of the twelve entrants seven started, and Pommern, on whom odds of 3 to 1 were laid, and who was again piloted by S. Donoghue, won comfortably by two lengths from Mr. Neumann's b. f. Snow Marten, Mr. Mortimer Singer's br. c. Achtoi being six lengths further away; Let Fly was unplaced. That concluded Pommern's work for the season, and, "triple crown" winner or no, he undoubtedly stamped himself as the best of his year. Possibly the future may reveal him as a really great horse. He was trained by C. Peck, and was bred by his owner.

With such a reduced programme it is difficult to say much of the other leading colts. In point of number of races won, Mr. A. E. Barton's br. c. My Ronald, by Dark Ronald—Amelia, did very well. Up to the time these notes were penned he had run eight times, winning on four occasions. The Berkshire Three-Year-Old Handicap at Newbury (£438), the Wood Ditton Stakes at Newmarket (£377), a three-year-old handicap at the First Spring Meeting (£261), and a plate at the First Extra Meeting (£217) summed up his successes, but he beat nothing of any great consequence. Better form was that of Mr. August Belmont's Danger Rock, by Rock Sand out of the American-bred Delusion, whose most important hit was in the Newmarket Stakes (£2,500), at the Second Spring. The colt, ridden by Whalley, had Let Fly and Tournament behind him; but he was unplaced in the New Derby, wherein Let Fly, who swerved in the previous race, was second. Lord Carnarvon's b. c. Volta, by Valens—Agnes Velasquez, after running third to Mr. J. B. Joel's Sunfire and Let Fly for the Greenham Stakes (£879) at Newbury, won a handicap at Hurst Park, and a three-year-old sweepstakes (£800) at Newmarket First Spring, Tournament and Friar Marcus being amongst the defeated. The latter, the property of the King, had a very promising two-year-old career, but he turned out a non-stayer in his next season, and, besides, did not evince much inclination for racing. Volta also won the July Cup at Newmarket (£265), but he was scarcely a "class" horse. Beyond winning the Chester Vase (£1,596), a weight-for-age race, in May, Sir Berkeley Sheffield's Esplandian, by Amadis—Ronna, did nothing of note. Mr. Mortimer Singer's br. c. Achtoi, by Santoi—Achray, hit the mark three times out of six, his best showing being in the Dee Stakes (£829) at

Chester, when, amongst others, he beat Apothecary (gave 6 lb.) out of a place, and the Newmarket St. Leger (£450), in which he beat Let Fly into third place. Apothecary, a chestnut by Radium—Sandpath, the property of Mr. J. A. de Rothschild, carried off the Newmarket Gold Cup £1,370) at the Second Extra Meeting in July, when Snow Marten could only get third.

The best of the three-year-old fillies were Vaucluse, Silver Tag, and Snow Marten. The first-named, a bay by Dark Ronald—Valve, the property of Lord Rosebery, scored once out of three attempts. That was in the One Thousand Guineas (£6,200) when, ridden by F. Rickaby, she beat Silver Tag by three-quarters of a length, Mr. J. B. Joel's Bright being third, and Snow Marten in the unplaced division. Silver Tag, a chestnut by Sundridge—Silver Fowl, subsequently secured the Falmouth Stakes (£985) and the Midsummer Stakes (£880), both at the Second July Meeting, and finished up by winning the Cambridgeshire from Mount William (rec. 17 lb.) and Khedive III. (gave 1 lb.); so that Vaucluse may be put down as pretty smart. Snow Marten, by Marten—Siberia, ran, up to the time of going to press, five times, and only won once. As that was in the New Oaks (£1,400), which, in the hands of Walter Griggs, she won by four lengths from Bright and Silver Tag, with Vaucluse unplaced, perhaps she may be set down as the best filly of the year. She afterwards ran third in the Cesarewitch.

The two-year-old form was somewhat involved. Mr. J. B. Joel's br. f. Telephone Girl, by Orby—Hello, made her *début* in a Maiden Plate at the First Extra Meeting, running third to Mr. E. Hulton's Wist. That a great opinion was held of her was proved by the fact that she was favourite (13 to 8) in a field of 43. At the Fifth Extra Meeting, in September, Telephone Girl won the Bibury Club Stakes (£1,240) by a head from Fifinella (gave 6 lb.), with Liku f. third, and Argos amongst the unplaced lot. This was followed by a neck victory over Argos in the Linton Plate (£335) at the First October Meeting, and a win in the Alington Plate (£260). At the Second October Meeting Telephone Girl did not run for the Middle Park Plate (£3,015), which was secured by Argos, a bay colt by Sundridge—Mésange, the property of Mr. Neumann, it being the colt's only success in four attempts up to the time of going to press. Telephone Girl afterwards won the New Nursery at the last October Meeting. Sirian, a b. c. by Sunstar—Sweet Lassie, who had previously run second in a plate at the First Extra, occupied a similar position here. The ch. f. Fifinella, by Polymelus—Silver Fowl, the property of Mr. Hulton, was probably the best of the season. She carried off the Fulbourne Stakes (£562) at the First July Meeting from a moderate field, and the Cheveley Park Stakes (£835) at the Second October. The best of the remainder were probably Ali Bey, a b. c. by Bayardo—Mouvsall, Marcus, b. c. by Cicero—St. Sava, King's Day, ch. c. by Roi Herode—Set Fair, and Figaro, br. c. by Sundridge—Sirenia. The first-named ran seven times, and was only unplaced once. His successes were in the Mostyn Plate at Chester (£167), in May; the Wednesday Plate (£301) at the Second Extra, for which 26 started; and the Buckenham Stakes (£1,350) at the First October.

Of older horses, Mr. L. Neumann's Lanius, 4 yrs., won the Jockey Club Stakes (£7,435) at the First October, but could only get second to Son-in-Law (level) in the Jockey Club Cup. Black Jester, 4 yrs., was somewhat disappointing, but accomplished good performances when he won the City and Suburban (£1,765) under 9 st., giving 16 lb. to Diadumenos (who afterwards secured the Kempton Jubilee of £2,650 with 7 st. 12 lb. up) and the June Stakes (the equivalent of the Epsom Coronation Cup) of £1,205 at the Newmarket First Extra. In the latter race Son-in-Law (level), who afterwards won the Cesarewitch, was unplaced.

Turf statistics are mainly interesting from a comparative point of view, but owing to the curtailment they lose that value for the season under review. D. Maher's health did not admit of his return to the saddle, and the leading jockey was again S. Donoghue, who rode 62 winners out of 378 mounts. His percentage, 16·40, was scarcely so good as that of F. Rickaby, second on the list, who was 36 times first out of 200 attempts, with a percentage of 18·00. F. Bullock, 200 mounts, 36 wins; M. Wing, 268 mounts, 31 wins; A. Whalley, 198 mounts, 23 wins; and Walter Griggs, 191 mounts, 21 wins, were next in order.

Amongst winning owners H.M. the King had to be content with 2 races, value £975; Mr. L. Neumann secured 7 races of the total value of £13,546; Mr. Sol Joel, 6, value £11,336; Mr. J. B. Joel, 21, value £9,931; Mr. E. Hulton, 16, value £8,742; Lord Rosebery, 9, value £8,099; Sir John Thursby, 5, value £5,608; and Lord Derby, 13, value £4,802 10s. Mr. L. Neumann was also first of the winning breeders, thanks to Lanius, Argos, Snow Marten, and Figaro, 11 horses of his breeding capturing 11 races of the aggregate value of £14,693. Mr. Sol Joel, who bred Pommern, was next with 2 winners of 5 races, value £11,536; Mr. J. B. Joel, whose 15 winners secured £10,988, being third. Mr. Hulton, breeder of Silver Tag, Atheling, Torloisk, Fifinella, and others, was fourth, with 8 winners of 13 races, value £8,023; and Lord Rosebery, breeder of Vaucluse, was close up.

The names of Persimmon and St. Simon did not appear in the list of winning sires, but the Galopin blood made its mark through the defunct Desmond and St. Frusquin, who occupied fifth and sixth places. Chief honours were secured for the second year in succession by Polymelus (sire of Pommern), whose 10 descendants won 16 races of the total value of £17,781. Dark Ronald (who is abroad) had 11 winners (including Vaucluse and Son-in-Law), who carried off 17½ races, value £12,103 10s.; and Sundridge was third—14 winners of 18½ races, value £10,506 10s. P. P. Gilpin headed the list of winning trainers, sending out 8 horses who won 12 races, value £15,324. C. Peck was only 17 sovs. behind, his winning horses being 7, and number of races 13.

YACHTING.—There was practically no yachting during 1915. Facilities were restricted by Admiralty orders in many districts, and no regattas were arranged. Many owners of steam yachts offered their vessels to the Government, and some were used as patrol ships, while others were fitted out for Red Cross work.

Other sports, such as Cricket, Cycling, Croquet, Golf, Hockey, Rackets, Tennis, Lawn Tennis, and Rowing, were abandoned. This was the first year that the Cricket County Championship had been interrupted since its inauguration in 1873.

Hunts and Hounds.

Staghounds:—England, 14 packs (308 couples); Ireland, 8 packs (60 couples).
Foxhounds:—England and Wales, 170 packs (over 5,950 couples); Scotland, 10 packs (280 couples); Ireland, 24 packs (over 900 couples).

Pack.	Couples.	Master.	Kennels.
		Staghounds (20 couples or more).	
Amory's (Capt.)	25	Capt. H. H. Amory	Hele, Exbridge.
Berks and Bucks	20	Messrs. Headington & Shackle.	Highway, Maidenhead.
County Down	30	(A Committee)	Ballykine, Ballinahinch, county Down.

Meath	73	Mr. J. Dunville	Nugentstown, Kells.
West Meath	55	Mr. E. W. Hope Johnstone	Culleen, Mullingar.

CLOSE SEASON FOR GAME, WILD BIRDS, &c.

THE following Table gives the "close" time during which it is illegal to pursue the different kinds of game mentioned, all dates inclusive :—

GAME.	ENGLAND.	SCOTLAND.	IRELAND.
Black Game or Heath Fowl.	11 Dec. to 19 Aug. (31 Aug. in Somerset, Devon, and New Forest).	11 Dec. to 19 Aug.	11 Dec. to 19 Aug.
Bustard	2 Mar. to 31 Aug.	None.	11 Jan. to 31 Aug.
Deer, Male .	None.	None.	1 Jan. to 9 June.
,, Fallow Male	None.	None.	Michaels. to 9 June.
Grouse or Red Game	11 Dec. to 11 Aug.	11 Dec. to 11 Aug.	11 Dec. to 11 Aug.
Hare	None.	None.	20 Apr. to 12 Aug.†
Heath or MoorGame	None.	As "Muirfowl."	11 Dec. to 11 Aug.
Landrail, Quail	As "Wild Birds."	As "Wild Birds."	11 Jan. to 19 Sept.
Muirfowl, or Ptarmigan	None.	11 Dec. to 11 Aug.	11 Dec. to 19 Aug.
Partridge ...	2 Feb. to 31 Aug.	2 Feb. to 31 Aug.	2 Feb. to 31 Aug.
Pheasant ...	2 Feb. to 30 Sept.	2 Feb. to 30 Sept.	2 Feb. to 30 Sept.

† Subject to variation in various counties: *e.g.*, Tyrone, 1 Apr. to 12 Aug.; Dublin, 1 Mar. to 20 Sept.

It is also unlawful to kill pheasants, partridges, grouse, moor game, or hares on a Sunday or Christmas Day.

In England hares, rabbits, woodcock, snipe, quail, landrail, and heath or moor game (and the eggs of swan, wild duck, teal, and widgeon) are protected under the Game Laws, though no close-time is fixed for them by those laws. In Scotland the same remarks apply to deer and hares, to the first four birds, and to wild duck; in Ireland to all these five birds, with the further addition of widgeon, teal, and plover. The close-time for all these birds (except quail and landrail in Ireland, for whose close-time see above) is, under the Wild Birds Protection Acts, 1880 to 1908, from 2 March to 31 July, both inclusive. Otherwise this close-time applies to all wild birds throughout the United Kingdom. The penalty for killing any wild bird in such close-time, or for selling or having in possession between 16 March and 31 July, both inclusive (unless the killing can be proved to have occurred at a time and place to which the Act does not apply), is a reprimand and costs for the first offence, and 5*s.* and costs for each bird for every subsequent offence, or, in the case of the undermentioned birds, £1 for each bird for each offence. In any case the Court may also order the forfeiture of any bird (or egg, where protected—*see* next column) in respect of which the offence was committed. In the Island of St. Kilda the fork-tailed petrel and St. Kilda wren are deemed to be included in the following list, and the birds marked * to be omitted.

American quail.	Kittiwake.	Scout.
Auk.	Lapwing.	Sealark.
Avocet.	Lark.	Seamew.
Bee-eater.	Loon.	Sea parrot.
Bittern.	Mallard.	Sea swallow
Bonxie.	Marrot.	Shearwater.
Colin.	Merganser.	Sheldrake.
Cornish chough.	Murre.	Shoveller.
Coulterneb.	Night-hawk.	Skua.
Cuckoo.	Night-jar.	Smew.
Curlew.	Nightingale.	Snipe.
Diver.	Oriole.	Solan goose.
Dotterel.	Owl.	Spoonbill.
Dunbird.	Ox-bird.	Stint.
Dunlin.	Oyster-catcher.	Stone curlew.
Eider-duck.	Peewit.	Stonehatch.
Fern-owl.	Petrel.	Summer snipe.
*Fulmar.	Phalarope.	Tarrock.
*Gannet.	Plover.	Teal.
Goatsucker.	Ploverspage.	Tern.
Godwit.	Pochard.	Thicknee.
Goldfinch.	*Puffin.	Tystey.
Grebe.	Purre.	Whaup.
Greenshank.	*Razorbill.	Widgeon.
*Guillemot.	Redshank.	Wild duck.
Gull (except black-backed)	Reeve or Ruff.	Willock.
	Roller.	Wimbrel.
Hoopoe.	Sanderling.	Woodcock.
Kingfisher.	Sandpiper.	Woodpecker.

Offenders refusing their names and addresses are liable to a further penalty of 10*s.*, but the Acts do not apply to any person shooting on his own land, or authorising anyone so to shoot, any wild bird not included in the above list.

On the application of the local authorities, the Secretary of State in England and Wales, the Secretary for Scotland in Scotland, or the Lord Lieutenant in Ireland, has power to vary or abolish the close-time for any bird or birds in any county by order to be published in the *Gazette*. They may also direct that the above enactments shall apply to any wild bird not specified in the list, and may further prohibit the taking of the eggs of any wild bird in any county or part thereof. The Secretary of State in England and Wales, or the Secretary for Scotland, may also on the application of the local authorities make an order providing that in any specified area the taking or killing of any particular kinds of wild birds shall be illegal during any period specified in the order. These various powers have been exercised in many cases—too numerous to recapitulate here.

Penalties are imposed on persons setting springs, gins, &c., on poles, trees, mounds, &c., so as to injure wild birds. Persons permitting such acts are equally liable. The use of a hook or like instrument for taking wild birds is forbidden.

HUNTING AND GROUND GAME.

There is no statutory close-time for fox-hunting or rabbit-shooting, nor is there, except in Ireland, for deer or hares; but there is an "unwritten law" which the sportsman respects as much as he does the enactments of Parliament. 1 November is the recognised date for the opening of the fox-hunting season, which continues till the following April. Otter-hunting lasts from mid-April to mid-September. The period for deer-hunting or stalking varies from about 12 Aug. to 12 Oct. for stags, and from 10 Nov. to the end of March for hinds. By an Act passed in 1892 the sale of hares or leverets in Great Britain is prohibited from March to July inclusive under a penalty of a pound. This does not apply to

foreign hares. The statutory close season for hares in Ireland has been varied for some counties by order of the Lord Lieutenant, and it is now mostly from 1 April to 12 August.

CLOSE-TIME FOR SALMON.

I. England and Wales.

Under the Salmon Fishery Acts, salmon (including all migratory fish of the *genus* salmon) are protected, and a close-time is fixed for England and Wales, including the Esk in Dumfries, during which fishing for any of such fish is prohibited. The close-time for nets begins on 1 Sept., and for rods on 2 Nov. ; for both nets and rods it ends on 1 Feb. By an Act of 1907 the Board of Agriculture and Fisheries may make provisional orders varying the law on these and other points. Nine of such orders have been made. The close-time may also be varied by a bye-law by local boards of conservators, provided it begins for nets not later than 1 Nov., with a minimum of 154 days, and for rods not later than 1 Dec., with a minimum of 92 days. For putts and putchers the annual close season is from 1 Sept. to 1 May, except where altered by bye-law. The statutory dates have been varied as follows :—

Close-time for	Nets.	Rods.
Adur	1 Sept. to 2 Feb.	1 Oct. to 2 Feb.
Hampshire†‡	31 July to 1 Feb.	2 Oct. to 1 Feb.

Fowey	§1 Nov. to ,,	,, ,, §§

* Except above Woodbury Road Station, 1 Sep. to 15 April. † Above S. Biddick. ‡ Below Old Sandsfield for nets. For rods these dates do not apply in R. Eden above Irthing Foot, or in R. Eamont. § Below Lostwithiel only. ‖ Except R. Erme, 30 Sept. (rods 30 Nov.) to 4 April. §§§ 1 June to 1 Feb. above Tewkesbury Weir. ** 16 Aug. to 16 April for putts and putchers. §§ Above Lostwithiel, 1 Dec. to 1 April. †† East of Needles Lighthouse the dates are:—For nets, 1 Sept. to 14 Feb. ; for rods, 16 Oct. (Beaulieu Manor, 31 Oct.) to 1 Feb.

No fresh salmon may be sold between 3 Sept. and 1 Feb., except such as come from parts beyond the seas, or as have been taken, if in the United Kingdom, by legal netting. During that period all packages containing salmon consigned by any common or other carrier must be clearly marked with the word "Salmon." Salmon, dried, pickled, or cured abroad, or, if within the United Kingdom, between 1 Feb. and 3 Nov., may be sold after that date. The onus of proof that the fish were caught out of the United Kingdom, or, if within the kingdom, that they were caught during the legal netting season by legal means, or that, if pickled, they were pickled between 1 Feb. and 3 Nov., lies with the person selling or exposing for sale. The exportation of salmon from any part of the United Kingdom is prohibited between 3 Sept. and 30 April, unless caught at a time at which its sale in the place where it was caught would be legal, if in the United Kingdom: the *onus probandi* lies on the person exporting. The capture and sale of "unclean" salmon, *i.e.*, salmon recently spawned or full of spawn, are prohibited under heavy penalties. Roe may not be used as a bait in salmon angling.

A weekly close season, during which net-fishing for salmon is prohibited, is fixed in England from noon on Saturday to 6 a.m. on Monday. This has been varied by conservancy boards in most districts, and extended to 48 hours, with certain changes in the hour of commencement.

II. Scotland.

In Scotland the annual close-time must not be less than 168 days. It is, for nets, from 27 Aug. to 10 Feb., and, for rods, from 1 Nov. to 10 Feb., except as follows :—

Close-time for	Nets.	Rods.
Tay	21 Aug. to 4 Feb.	16 Oct. to 14 Jan.
Forth	—	ditto.
Add, Aray, Eckaig, N. & S. Esk, Fyne, Ruel, Shira	1 Sept. to 15 Feb.	1 Nov. to 15 Feb.
Conon	—	16 Oct. to 25 Jan.
Awe, Beauly, Dunbeath, Lossie, Ness, Spey	—	16 Oct. to 10 Feb.
Halladale, Strathy, Naver, Borgie, Helmsdale, Brora, Hope, Polla	—	1 Oct. to 10 Jan.
Earn	—	1 Nov. to 31 Jan.
Bervie, Carradale, Fleet, Garnock, Girvan, Howmore, Inner, Iorsa, Irvine, Laggan, Sorn, and rivers of Orkney, Harris, and Uist	10 Sept. to 24 Feb.	1 Nov. to 24 Feb.
Annan, Stinchar, Ugie.	ditto	16 Nov. to 24 Feb.
Rivers of Shetland	ditto	16 Nov. to 31 Jan.
Nith, Urr	ditto	1 Dec. to 24 Feb.
Rivers of Bute	1 Sept. to 15 Feb.	16 Oct. to 15 Feb.
Thurso	—	6 Oct. to 10 Jan.
Tweed	15 Sept. to 14 Feb.	1 Dec. to 31 Jan.

The weekly close-time for nets is between 6 p.m. Saturday and 6 a.m. Monday; and, for rods, on Sundays. The Esk, in Dumfries, is included under the English Salmon Acts.

In Scotland the law as to the sale of salmon differs somewhat from that in force in England.

III. Ireland.

In Ireland the close-time applies to both capture and sale of salmon and trout. The netting close-time must never be less than 168 days, but many variations have been made, of which it is impossible to specify all the details here; the following list shows the general close-time (all dates inclusive) in force in the various districts, in parts of some of which, however, it is different. The second column gives the point of delimitation on the coast between the districts, which include all rivers, &c., within their respective coast-limits.

District.	Coast Limits.	Cl.-T. Net.	Cl.-T. Rod.
Dublin	Skerries to	16 Aug. to 1 Feb.	1 Nov. to 31 Jan.
Wexford	Wicklow to	16 Sept. to 31 Mar.	1 Oct. to 14 Mar.
Waterford	Kiln Bay to	16 Aug. to 31 Jan.	1 Oct. to 31 Jan.
Lismore	Helvick Head to	31 July to 1 Feb.	30 Sept. to 1 Feb.
Cork	Ballycotton H. to	16 Aug. to 29 Feb.	13 Oct. to 14 Feb.
Skibbereen	Galley Head to	30 Sept. to 30 Apr.	1 Nov. to 1 Feb.
Bantry	Mizen Head to	16 Sept. to 31 Mar.	1 Nov. to 16 Mar.
Kenmare	Crow Head to	Do.	1 Nov. to 31 Mar.
Waterville	Lamb Head to	16 July to 31 Dec.	15 Oct. to 1 Feb.
Killarney	Bray Head to	1 Aug. to 16 Jan.	1 Nov. to 16 Mar.
Limerick	Dunmore Head to	20 July to 31 Jan.	1 Nov. to 31 Jan.
Galway	Hags Head to	1 Sept. to 15 Feb.	16 Oct. to 31 Jan.
Connemara	Cashla Coast-Guard Stn. to	16 Aug. to 31 Jan.	1 Oct. to 31 Jan.
Ballinakill	Slyne Head to	1 Sept. to 15 Feb.	1 Nov. to 31 Jan.
Bangor	Pigeon Point to	Do.	1 Oct. to 30 Apr.
Ballina	Benwee Head to	13 Aug. to 15 Mar.	11 Oct. to 31 Jan.
Sligo	Coonamore to	16 July to 31 Dec.	1 Oct. to 31 Jan.
Bally-shannon	Mullaghmore to	19 Aug. to 29 Feb.	10 Oct. to 29 Feb.
Letter-kenny	Rossan Point to	20 Aug. to 3 Feb.	2 Nov. to 31 Jan.
London-derry	Malin Head to	1 Sept. to 14 Apr.	21 Oct. to 31 Mar.
Coleraine	Downhill to	20 Aug. to 3 Feb.	1 Oct. to 29 Feb.
Ballycastle	Portrush to	20 Sept. to 16 Mar.	1 Nov. to 31 Jan.
Dundalk	Donaghadee to	13 Aug. to 11 Feb.	16 Oct. to 29 Feb.
Drogheda	Clogher Head to Skerries	Do.	16 Sept. to 11 Feb.

In Ireland the weekly close-time is fixed at 48 hours, commencing 6 a.m. Saturday.

CLOSE-TIME FOR TROUT AND CHAR.

The capture of trout and char in England and Wales is prohibited between 2 Oct. and 1 Feb., except (1) in the Thames and Lee, where the close season is from 11 Sept. to 31 March; and (2) in the cases noted below, where, under an Act of 1876, the close-time (for rods and nets, except where specified) has been varied by bye-law by local boards of conservators. In the districts marked * the close-time, as altered, applies only to trout. The *sale* of trout and char is absolutely prohibited throughout England and Wales from 2 Oct. to 1 Feb. :—

*Eden	2 Sept. (rods 2 Oct.) to 29 Feb.
*Usk	2 Sept. to 14 Feb.¶
Tyne	1 Oct. to 21 Mar.
*Wye	2 Oct. to 14 Feb.
*Taff & Ely	20 Sept. to 1 Feb.
*Cleddy	29 Sept. to 1 Mar.
*Ogmore	30 Sept. to 29 Feb.
*Teign	1 Oct. to 2 Mar.
*Exe	15 Sept. to 29 Feb.
*Seiont‡	22 Sept. to 21 Feb. (except Anglesey, 13 Feb.)
Derwent (Cumb.)	15 Sept. to 10 Mar. Except Char in Crummock and Buttermere, 1 Nov. to 30 June.
W. Cumberland	2 Sept. to 10 Mar.
Teify, *Avon (Devon), Conway; Norfolk ‡‡	1 Oct. to 29 Feb.
Adur, Cuckm're, Rother	1 Oct. to 31 Mar.
*Hampshire†	
Clwyd and Elwy, *Dart	2 Oct. to 29 Feb.
Camel, Fowey §§	
*Esk, *Tees, *Ayron	1 Oct. to 15 Mar.
*Severn, Towy, ‖	
*Lune, Ribble, Wear, Rhymney, Tamar & Plym	2 Oct. to 1 Mar.
Kent & Bela §	2 Oct. to 3 Mar.
Trent	2 Oct. to 15 Mar.
*Ouse and Nene	2 Oct. to 31 Mar.
Yorks	2 Oct. to 1 Apr.**
*Suffolk & Essex	2 Oct. to 10 Apr.
*Dee	14 Oct. to 14 Feb. (rods only).
*Coquet	1 Nov. to 3 Mar. (ditto).

In Scotland there is a close-time for trout from 15 Oct. to 29 Feb. In Ireland the close-time for trout is the same as for salmon. For pollen the close-time is from 14 Nov. to 31 Jan.

Between Sept. 3 and Feb. 1 all packages in England and Wales consigned by any common or other carrier and containing trout or char must be distinctly marked with the word "Trout" or "Char," as the case may be.

CLOSE-TIME FOR FRESHWATER FISH.

By the Freshwater Fisheries Act, 1878, a close-time for catching, selling or buying "freshwater fish" (which are defined for this purpose to include all kinds of fish, other than pollen, trout, and

char, which live in fresh water, except those kinds which migrate to or from the open sea) is fixed from 15 March to 15 June, both inclusive, for England and Wales except small parts of Norfolk and Suffolk, under a penalty of £2 for a first and £5 for a subsequent conviction. The close-season, however, does not apply to eels taken otherwise than by angling; or to freshwater fish other than grayling taken in certain private waters by leave of the owner; or to angling in public waters by leave of a board of conservators, or in private waters by leave of the owner; or to taking fish in certain cases for bait or for scientific purposes. Fishery districts may be wholly or partially exempted from this close-time with the sanction of the Board of Agriculture and Fisheries. The Axe, Avon (Devon), Wye, Eden, and Towy districts have been so exempted; also the Kent and Bela and Severn as regards pike; the Usk as regards eels; and parts of the Severn as regards fish other than grayling. For eels a separate close-time exists (so far as regards fixed engines in salmon rivers) in England from 1 Jan. to 24 June; in Ireland, with one or two exceptions, from 11 Jan. to 30 June. In the Severn, elvers, or eel fry, are protected between 1 Jan. and the last day of Feb., and between 15 May and 30 June. Certain other local close-times exist for freshwater fish, under local Acts or bye-laws.

PROTECTION OF CRABS AND LOBSTERS.

Under the Fisheries (Oyster, Crab, and Lobster) Act, 1877, it is prohibited to buy or sell crabs under 4¼ inches, measured across the largest diameter of the back, or lobsters under 8 inches, measured from tip of beak to end of tail when spread out flat. The capture of "soft" crabs and crabs with spawn is also prohibited. By local bye-laws of Sea Fisheries Committees (*vide infra*), the minimum size of lobsters and crabs that may be lawfully taken in different parts of the territorial seas has been increased, and in some cases the taking of lobsters with spawn is prohibited, or a close season fixed.

CLOSE-TIME FOR OYSTERS.

There are also local regulations for the protection of oysters; and by the Fisheries (Oyster, Crab, and Lobster) Act, 1877, a general close-time for the capture and sale of "Deep-Sea Oysters" is fixed from 15 June to 4 August; and for all other kinds of oysters—except oysters taken in the waters of a foreign state—from 14 May to 4 August. This Act applies to England and Scotland, but not to Ireland. By the Sea Fisheries Act, 1868, fishing for oysters is prohibited from 16 June to 31 August inclusive in the English Channel between a line drawn from the North Foreland Light to Dunkirk, and a line drawn from the Land's End to Ushant—the territorial seas of England and France alone being excepted. This close-time, however, cannot be enforced till the Convention between England and France, included in the Act, is ratified; and, until that is done, the Convention concluded in 1839, which prohibits oyster-fishing in those limits from 1 May to 31 August, is to remain in force so far as French fishermen are concerned. It is customary, however, for both Powers to agree to suspend the operation of this close season till 16 June in each year. In Ireland, taking oysters from licensed beds is larceny; and the Act 5 & 6 Vict. cap. 106, prescribes that no oysters may be taken between 1 May and 1 Sept., though this close-season has been varied in the following cases:—

Tralee Bay	1 Mar. to 30 Sept.
Galway Bay	1 Jan. to 30 Nov.
Strangford Lough	1 Mar. to 31 Aug.
Achil Sound, Clew Bay	2 April to 30 Sept.
Sligo, Ballisodare and Drumcliffe Bays	30 April to 1 June.

Licences for Shooting and Fishing.

GAME AND GUN LICENCES.—A licence is required by every person who hunts, shoots, or takes game, except persons (in Great Britain) taking woodcock and snipe with nets or springes; rabbit-warren proprietors, or others, on enclosed land, killing rabbits; persons hunting deer, or hares, with hounds; owners or occupiers, or their servants, killing deer on their own land; beaters and others, not holding guns, attending holders of game licences. Occupiers of enclosed land, or owners, having the right to kill game, may themselves kill hares, or authorise others to do so, without a licence, but such authority must be limited to one person at a time in any one parish, and must be registered with the clerk of the Justices of the Petty Sessional Division in which the land is situate. Even when the quarry is not what is legally known as "game," a "gun" licence is necessary. A game licence, however, covers a gun licence. Soldiers, sailors, volunteers, or constables, on duty, or at practice, need not take out a gun licence, nor need occupiers of land scaring birds or killing vermin on such land, or persons so acting under the orders of occupiers holding a licence. Unless, however, the occupier is himself licensed, he cannot authorise any unlicensed person to carry a gun. "Scaring" birds is not to be regarded as including killing of any birds, and "vermin" does not include rabbits. The rates of duty are given as p. 415.

FISHING LICENCES.—In all fishery districts in England and Wales, and in Ireland, a licence to fish for salmon is necessary, and in most English and Welsh rivers a similar licence is necessary for trout or char, except that a salmon licence includes the latter. In the Lune, Derwent, Severn, and Wye licences for "freshwater fish" are in force. In Scotland no licence is needed. A licence is available only in the district, and for the season, in which it is issued, except that in Ireland rod licences are available in all parts of that country. The rates on salmon nets and other like instruments range from £20 downwards in England and Wales, and from £30 downwards in Ireland. In the latter country the rate on draft nets, the kind most commonly used, is £3; in England and Wales it varies from £5 to £2. The licence duty on a salmon rod and line is £1 in Ireland. In England and Wales different rates are charged in different districts as follows (an asterisk signifies that lower rates of duty are chargeable for short periods, or for certain parts of the district):—

*Dee, 40/-; *Eden, *Derwent, *Exe, Hampshire, *Wye, *Usk, 30/-; Taw and Torridge, 24/-; *Lune, *Ribble, Clwyd & Elwy, *Conway, *Dovey, *Teify, Avon (Devon), *Dart, *Teign, Frome, Stour (Kent), *Yorkshire, *Tees, *Tyne, 20/-; *Dwyfach, Towy, 21/-; *Seiont, Avon, Brue & Parret, *Camel, *Fowey, 15/-; Cleddy, Taff & Ely, Ogmore, W. Cumberland, 10/6; *Kent & Leven, Rhymney, *Ayron, Severn, Axe, Trent, Tamar & Plym, 10/-; *Esk (Yorkshire), 7/6; Ouse (Sussex), Wear, Coquet, Cuckmere, Rother, Adur, 5/-.

ENGLAND AND WALES.—The administration of the laws of close season, &c., for salmon and freshwater fish is placed by the Salmon and Freshwater Fisheries Acts, 1861 to 1907, and the Board of Agriculture and Fisheries Act, 1903, in the hands of local boards, with the Board of Agriculture and Fisheries as the central authority. Districts may be formed and Boards of Conservators appointed, and the following districts have been formed, including generally all rivers running into the sea between the points named. Except in the cases marked † they also include the sea for three miles from the shore, or to the mid-channel in estuaries.

These Boards of Conservators consist mainly of three classes of members—those appointed annually by the Councils of the various counties through which the rivers flow; *ex-officio* members, qualified by ownership of lands or fisheries of a certain value; and representative members, elected annually by persons who have paid licence duty on instruments other than rod and line for salmon fishing in public waters. In certain cases, under local Provisional Orders, there are also members representative of fresh-water anglers. Districts where Provisional Orders are in force are marked thus *.

There are also certain bodies created by local statutes, having authority over the fisheries, *e.g.*, the Thames Conservancy Board, Port of London Authority, Lee Conservancy Board, and Conservators of the Medway.

The above-mentioned Boards have power to make bye-laws, not only for the regulation of the fisheries for salmon and freshwater fish, but also, in certain cases, for the regulation of other

Coquet	Newbiggin Point to Hawick Burn	C. Percy, Alnwick.

kinds of fishing which are prejudicial to such fisheries. They are also empowered to issue licences for fishing for salmon, trout, and in some cases freshwater fish generally.

SCOTLAND.—In Scotland there are 105 Fishery Districts, nearly each separate river forming a district of itself, but only 37 Boards of Conservators. The powers of these Boards are limited to the Salmon Fisheries.

IRELAND.—In Ireland there are 23 districts, embracing between them the whole country, each with a separate Board of Conservators (*see* p. 843).

SEA FISHERIES DISTRICTS.—Under the Sea Fisheries Regulation Acts, 1888 to 1894, the Board of Agriculture and Fisheries has power to form sea fisheries districts within the territorial waters of England and Wales, and to constitute local Fisheries Committees, either for a single county or borough, or for several jointly. These Committees have power to make bye-laws, to be confirmed by the Board of Agriculture and Fisheries, regulating or prohibiting the use of instruments for the capture of sea fish (including shell fish and crustaceans, but excluding salmon), the deposit of rubbish on fishing grounds, &c. The following districts have been created, including in each case the adjoining coast and territorial seas between the points respectively mentioned:—
1. Northumberland (coterminous with that county). 2. North Eastern, from Northumberland to Donna Nook in Lincolnshire. 3. Eastern, Donna Nook to Yarmouth. 4. Kent and Essex, Dovercourt to Dungeness, including the Thames estuary to London Stone near Yantlet Creek. 5. Sussex (coterminous with that county). 6. Southern, Western boundary of Dorset to Hayling Island. 7. Devon, and 8. Cornwall (each coterminous with the respective counties). 9. South Wales, Eastern boundary of Cardiff to Cemmaes Head. 10. Lancashire and Western, Cemmaes Head to Haverigg Point. 11. Cumberland, Haverigg Point to Sark Foot.

Similar districts may be formed in Scotland under the Sea Fisheries Regulation (Scotland) Act, 1895.

Seasonable and Unseasonable Fish.

THE following table shows the periods when the different kinds of edible fish mostly in use are "in season" and "out of season."

The letter *p* signifies that the fish are then in their prime or most plentiful; the letter *x* signifies that the fish may be obtained, but are not at their best; the letter *c* signifies that it is "close-time" as fixed by statute.

(*a*) This is for sea crayfish (or crawfish). River crayfish can be obtained in the summer and autumn. It is illegal to take fresh-water crayfish from March to June.

(*b*) Foreign oysters can be sold in the close season, and are to be had almost all through the year, even though they have been laid down in English beds for temporary storage.

(*d*) In the close season, salmon from Holland, and also from certain British rivers where net fishing is permitted later in the year than usual, are largely sold.

(*e*) For the first six months the bulk of our London supply of shrimps comes from Holland, but Dutch shrimps are far inferior to the English, which are plentiful from July to December.

Metropolitan Water Board, 1915–16.

Chairman, E. B. Barnard, D.L.

Vice-Chairman, G. S. Elliott, J.P.

Members, 66, appointed for three years ending June 1, 1916.

Area, 558 square miles.

Charges, Domestic, 5 per cent. on rateable value. See Metropolitan Water Board (Charges) Act, 1907. (7 Ed. 7; Ch. CLXXI.), which came into force April 1, 1908.

Funded Debt of Board on April 1, 1914—£48,728,931 (p. 4 Board's 11th Annual Report).

Population supplied (Estimated), 6,721,207.

No. of Services, 1,121,400.

Storage, 1,982 acres; total capacity in million gallons, 12,907·7. (See p. 69, 11th Annual Report.)

Supply, Annual, 89,183·7 million gallons; average daily, 244·3 million gallons. (See p. 11, 11th Annual Report.)

Works, Table XXVII., pp. 70–1, 11th Annual Report.

OFFICIALS.

Clerk, A. B. Pilling, F.C.I.S.
Deputy Clerk, W. J. G. Norris.
Supervisor, F. W. Drake.
Surveyor, Harold Oxley.
Statistical Officer, G. P. Warner Terry.

Chief Engineer, W. B. Bryan, M.I.C.E., M.I.M.E.
Deputy Chief Engineer, J. W. Restler, M.I.C.E., M.I.M.E.
Chief Assistant Engineer, C. F. Marsh, M.I.C.E., M.I.M.E.
Senior Assistant Engineer, G. O. Ritchie.

Accountant and Registrar of Debenture Stock, Arthur Newton.
Deputy Accountant, D. P. Hutchings.
Revenue Officer, Frederick Coffee.

Solicitor, Walter Moon.
Senior Assistant Solicitor, C. A. Hunt, B.A.

Director of Water Examination, A. C. Houston, M.D., D.Sc., 20 Nottingham Place, W.
Senior Bacteriological Assistant, D. G. Sutherland, M.A., B.Sc., M.B.
Senior Chemical Assistant, R. B. Floris, F.C.S., F.I.C.

Central Offices, Savoy Court, Strand, W.C.
Telephone Nos., 4315-9 Gerrard.
Telegrams—"Water Board, Rand, London."

Constitution.—The Metropolitan Water Board came into existence in 1903 under the provisions of the Metropolis Water Act, 1902.

The third Board went out of office in June, 1913, when the fourth Board was elected in its place, and will go out of office on June 1, 1916.

The Board is constituted on the principle of indirect election, namely, of representatives (66 in all) appointed by the County Councils of London, Essex, Herts, Kent, Middlesex and Surrey, and by the Borough Councils and Urban District Councils comprised within the 559 square miles statutory area of the Board.

There are on the fourth Board 17 original members of the Board first appointed in 1903.

Area.—The County distribution of the Board's statutory area is as follows:—

County.	Acres. sq. miles.	acres.
London	116	576
Essex	107	56
Hertford	22	556
Kent	159	82
Middlesex	97	431
Surrey	55	160
Total	558	581

Funded Debt.—The funded debt of the Board as at April 1, 1915, was:—

	Amount of Stock.	Interest.
(*i*) Metropolitan Water (A) Stock	£6,060,165	£181,805
(*ii*) Metropolitan Water (B) Stock	£35,181,889	£1,055,456
(*iii*) Redeemable Debenture Stocks	£7,217,838	£216,911
(*iv*) Mortgage Loan	£387,000	£15,480
	£48,846,892	£1,469,652

In addition to the annual interest shown above there are certain annuities and rent charges amounting to £7,900—or a total of £1,477,552—equivalent to 3*s.* 9*d.* per thousand gallons supplied.

Water Rental.—The net water rental received by the Board during 1914–15 was approximately £2,933,400, or an increase of £22,690. It is satisfactory to state that, notwithstanding the disturbance caused by the War, the percentage of collection for the half-year ended March 31, 1915, in respect of domestic supplies and fixed charges was 94·4, being the same as for the corresponding period last year.

Deficiency.—The effect of the new charges imposed by the Board's Act, 1907, was to create a deficiency (the yield being less than that obtained under the Acts of the old Companies), which deficiency had grown to a sum of £359,454 by the end of the year 1914–15. But this deficiency is counterbalanced by the fact that the Board have set aside no less a sum than £545,076 to a New Works Sinking Fund, being bound to do so by law.

The audit of the Board's accounts for the year ended March 31, 1914, showed a certified deficiency of £15,385, as against an estimated deficiency of nearly £105,000. This satisfactory position was attributable to the fact that the income exceeded the estimates by about £70,000, due to the favourable conditions of the summer of 1913, to a further reduction in allowances for empty premises, and to savings under the head of pumping and distribution charges. Precepts to meet this deficiency were duly issued on the contributory authorities.

The total rateable value of the boroughs and districts in the Board's area directly represented on the Board and liable to meet precepts for any deficiency that may arise, is as follows:—

In London	£45,341,614
In Extra-Metropolitan Counties	£11,630,320
	£56,971,934

Staff.—The Board's staff numbers 923 officers (including 58 women), 3,189 workmen and others on weekly wages, and 116 service staff on weekly wages, or a total of 4,228 at April 1, 1915. This represents the normal establishment after deducting the temporary workmen engaged to fill the places of men on War leave, whose names accordingly remain on the pay sheets. The total salary list at the same date was £173,943.

The War.—A highly creditable percentage of the Board's officers and servants within military age have joined the Colours; so much so, that in some instances leave has had to be refused owing to the exigencies of the Board's service.

At the end of August, 1915, four members of the Board, with 268 officers and 465 servants, were on military or naval duty; those killed on active service numbered 23.

Head Offices.—New Head Offices are in course of erection on a portion of the site in the possession of the Board at New River Head, Rosebery Avenue. The well-known Oak Room, which formed part of the original Water House erected in 1613, will be incorporated in the new structure.

Sir Hugh Myddelton's Round Pond at New River Head, which had been in almost continuous use for over 300 years, was abandoned in June, 1914, in preparation for part of the site of the new offices.

Sources of Supply.—The Board's supply of water is derived from the Rivers Thames and Lee, the gravel beds near the Thames, the Chadwell Springs—which is the beginning of the New River—and wells sunk in the Lee Valley on the north of the Thames, in Kent, and certain other points south of the Thames.

The Board's supply (direct and in bulk to adjacent undertakings) during the year was 89,420 million gallons of water, or a daily average of 245 million gallons. The grand total volume is equivalent to 399·2 million tons of water. The Thames furnished 58·5 per cent., the Lee 23·1 per cent., and the wells, &c., 18·4 per cent. of this total.

Population.—The total estimated population supplied by the Board at the close of the year was 6,744,247. It is estimated that 56·0 per cent. was supplied from the Thames, 24·7 per cent. from the Lee, and 19·3 per cent. from the wells and springs.

Of the total population 65·3 per cent. is north of the Thames, and 34·7 per cent. south of the river. The population inside London is 67·2 per cent. of the whole.

Daily Supply per head.—The daily average supply per head was 36·08 gallons, compared with 36·16 gallons in 1913–14.

Storage.—The effective amount of storage and subsidence reservoir capacity for unfiltered water possessed and in use by the Board at the end of the year was as follows:—

	No.	Area in Acres.	Capacity in million gallons.
Thames Valley ...	31	1,026·5	7,267·5
Lee Valley	17	955·0	5,639·5
Total	48	1,981·5	12,907·0

Additional Storage Provision.—The Board are constructing a reservoir at Littleton to contain 7,000 million gallons, part of an authorised scheme to include a further reservoir to be constructed at Stanwell, to contain 3,300 million gallons. Considerable variations in the design of the Littleton Works have been made, in order to improve the quality of the water and to cope with possible troubles arising from algal growth.

The net effect of the omissions and additions in the proposed works showed an approximate saving on the contract of £40,150.

The Board have resolved that the supplies from the Littleton and Staines Reservoirs should be so arranged as to be drawn upon as equally as possible, the intention being that the storage in the Thames Valley system is to be worked ultimately in a uniform manner so that the respective periods of storage in all the Thames reservoirs may approximate, due regard being had to periods of drought and the avoidance of double pumping.

Incidental to the construction of the reservoir it will be necessary to carry out certain works not comprised in the reservoir contract, for example, road widenings, a covered service reservoir, pumping station and plant, conduits, mains, filter beds, etc. The cost of these will amount to a considerable sum which, however, cannot at present be stated as the plans are being revised by the Chief Engineer, but it would appear that before water from Littleton can be brought into London, works already authorised by Parliament (including the Littleton Reservoir, but excluding the proposed new reservoir at Staines), will have to be executed at a cost of at least £3,000,000 on present war prices, and it is essential to the maintenance of the supply that these works should be completed within the ensuing five years.

Research Work.—The Director of Water Examination submitted his 10th report on research work during the year, which dealt with the following seven subjects:—(i) Search for pathogenic microbes in river water and sewage; (ii) Methods for the isolation of the typhoid bacillus; (iii) Influence of temperature on the vitality of the typhoid bacillus; (iv) Study of streptococci in excremental matters; (v) The value of storage; (vi) Lime as a bactericidal agent; (vii) Vitality of the cholera vibrio outside the animal body.

The report is not only of scientific interest, but of great practical importance. Copies were circulated to constituent and scientific authorities and placed on sale.

Comparison of Works.—The following table shows at a glance the increases which have taken place under the Board in the active equipment of the waterworks since the transfer of the undertakings:—

	Before June, 1904.	At March 31, 1915.
Storage reservoirs for unfiltered water	44	48
Acreage	843	1,981·5
Capacity in million gallons	4,215·7	12,907·0
Service reservoirs for filtered water	75	87
Capacity in million gallons	244·5	312·0
Filter beds	137	172
Acreage	139	170·7
Engines	235	281
Horse-power	32,177	43,306
Miles of water pipes	5,759	6,446

A. B. PILLING,
Clerk of the Board.

September, 1915.

In the first half of the seventeenth century (1633 has been cited as the best approach to a definite date) we meet with the earliest mention of the introduction of *rails* for the lessening of friction upon roads. Beams of wood, some six or seven inches in breadth, were about this time laid down to facilitate the draught of the waggons in the vicinity of some of the coal-mines at Newcastle; and as a matter of necessity the addition of "sleepers" had speedily to follow. In 1738, at Whitehaven, it is stated that iron was first substituted as the material of the rails; and in 1767 it appears established that this revolution was adopted at Coalbrookdale, being followed nine years later at the Sheffield Colliery. As yet, however, only thick plates of iron were fastened to the surface of the wooden rails, and it was not till 1789 that "edge rails" were introduced, the credit of their adoption being assigned to William Jessop, on the Loughborough and Nanpantan line. James Watt had conceived the idea of utilizing steam for locomotion, and there is a record of a model locomotive having been used in Cornwall in 1784. George Stephenson, however, in the year 1825, was the first to bring the project fairly into practical shape.

The first Act obtained for the construction of a railway was that of the Surrey Iron Railway Company in 1801, for a line 9½ miles long from Wandsworth to Croydon. In 1804 an Act was passed "for making and maintaining a railway or tramroad from the town of Swansea into the parish of Oystermouth, in the County of Glamorgan, and for the hauling or drawing of waggons or other carriages passing upon the said railway or tramroad with men, horses, or otherwise." On the 21st of February, 1804, Trevithick's patent locomotive steam engine was tried at Penydarran, near Merthyr, and conveyed along a tramroad 10 tons of bar iron, and about 70 persons, a distance of 9 miles. The application passed the third reading as a railway or tramroad. The word "otherwise" was evidently intended to cover the use of Trevithick's engine, and this Act may therefore be considered the first in which steam was contemplated as the motive power. The line is now known as the Swansea and Mumbles Railway. Then followed the Kilmarnock and Troon, the Severn and Wye, the Gloucester and Cheltenham, Plymouth and Dartmoor, Stratford-on-Avon and Moreton, and other small undertakings, about twenty-five in number altogether, with an aggregate of 325 miles, and an authorized capital somewhat over a million. It is almost unnecessary to add that animal power only was contemplated in their working. The Stockton and Darlington Act was obtained in 1821, with a capital of £102,000; and it is remarkable that, while animal power was to be relied upon for working the line, the clause in the Act states "with men and horses *or otherwise*." George Stephenson came upon the scene immediately after this Act was obtained, and was appointed engineer of the line; and at his urgent request, Edward Pease, the promoter, applied for a new Act empowering the company to work the railway with locomotive engines. Great opposition was encountered, but the Bill finally passed in 1823, and the line, which was 25 miles in length, was opened on the 27th of September, 1825. The Monkland and Kirkintilloch Railway, a colliery line near Glasgow, opened in 1826, was really the first to follow the example of the Stockton and Darlington, and several other small lines—many of them worked partly by fixed and partly by locomotive engines—quickly adopted the new traction power. The inauguration of the Liverpool and Manchester line in 1830, attended as it was with a tragic result, was the first to impress upon the people that a revolution in travelling had really taken place. Leicester to Swannington came next, but that from London to Birmingham was the largest that had yet been projected. A great struggle took place with landowners and other influential personages, opposed not only to this Bill in particular, but to the introduction of railways generally. Undaunted courage and perseverance on the part of the promoters prevailed, and the Bill, which was rejected in 1832, passed in 1833, but not until landowners and others had been conciliated by having the price originally estimated for their land, &c., doubled and even trebled. The expenses of carrying this Bill, which was probably the most momentous Parliamentary campaign in the history of railways, were over £70,000. The line was opened throughout in 1838, and the first train accomplished the distance at an average speed of over twenty miles an hour. The tide of public opinion was now fairly turned, and ran as strongly in favour of railways as it had before been against them. The Grand Junction, the London and Greenwich, London and Southampton, the Great Western, Birmingham and Derby, Bristol and Exeter, Eastern Counties, Manchester and Leeds, Midland Counties, North Midland, South Eastern, London and Croydon, Birmingham and Gloucester, together with a large number of small Bills, were all passed in four years from the passing of the London and Birmingham Bill, and before that line was opened.

Up to 1840, inclusive, 299 Acts, authorizing the construction of 3,000 miles of line, had been passed. The inevitable reaction set in, and in 1841–2–3 only a few small Bills were passed by the Legislature; but as the Liverpool and Manchester, the London and Birmingham, and other leading concerns were paying 10 per cent. dividends, and some of the smaller lines were yielding even larger returns, attention was naturally drawn to the remunerative character of this class of property, and the supply of railway shares became far below the demand. A flood of new projects appeared before the public, and the Legislature even, labouring apparently under the general excitement, encouraged promoters by relaxing or withdrawing the general opposition which had previously been offered. In 1844, 797 miles were authorized; in 1845, 2,883 miles; and in 1846, the prodigious total of 4,790 miles, under no less than 272 Acts, obtained Parliamentary sanction. The succeeding years saw some abatement, but still there were 1,663 miles passed in 1847, and 300 in 1848. These figures illustrate the rise and fall of the great fever known as the "railway mania."

The Railways Regulation Act of 1840, the first of the General Acts, provided for a month's notice being given to the Board of Trade before opening; for returns of traffic to be made by the companies, as also of accidents involving personal injury; for Government inspection of works, for the approval of bye-laws, &c. Afterwards were passed Acts for their better regulation, and for the conveyance of troops, 1842, the Railways Further Regulation Act of 1844, the Railways Clauses Consolidation Act, 1845, and the Canal and Railway Carriers Act of the same session.

Then followed legislation on the leasing and sale of railways, on the gauge, on cheap trains, passenger duty, &c.

When war was declared, the Government took over the home railways. The following is an extract of announcement being issued from the War Office :—

"WAR OFFICE, *Aug.* 4th, 1914.

"An Order in Council has been made under Section 16 of the Regulation of the Forces Act 1871, declaring that it is expedient that the Government should have control over the railroads in Great Britain. This control will be exercised through an Executive Committee composed of general managers of railways which has been formed for some time and has prepared plans with a view to facilitating the working of these provisions of the Act."

TERMS OF REMUNERATION.—The Board of Trade issued the following notice, dated September 15th, 1914.

"The Regulation of the Forces Act 1871, under which His Majesty's Government have

HIGHEST AND LOWEST PRICES OF RAILWAY SECURITIES FROM 1ST JANUARY TO 30TH JUNE, THE MAKING-UP PRICES OF 27TH JULY, 1914, AND THE PRICES 31ST DECEMBER, 1914, AND 30TH JUNE, 1915.

taken possession of most of the railways of Great Britain, provides that full compensation shall be paid to the owners for any loss or injury they may have sustained thereby, the amount of such compensation to be settled by agreement, or if necessary by arbitration.

"His Majesty's Government have agreed with the railway companies concerned that, subject to the undermentioned condition, the compensation to be paid them shall be the sum by which the aggregate net receipts of their railways for the period during which the Government are in possession of them fall short of the aggregate net receipts for the corresponding period of 1913. If, however, the net receipts of the companies for the first half of 1914 were less than the net receipts for the first half of 1913, the sum payable is to be reduced in the same proportion." [On April 14th, 1915, the Board of Trade announced that an alteration had been made in this agreement by which the proportionate reduction in net receipts of the companies referred to will not in future be made, but 25 per cent. of the war bonus granted to railway employees who come within the Railway Conciliation Scheme shall be borne by the railway companies, and not by the Government.]

"This sum, together with the net receipts of the railway companies taken over, is to be distributed amongst those companies in proportion to the net receipts of each company during the period with which comparison is made.

"The compensation to be paid under this arrangement will cover all special services, such as those in connection with Military and Naval transport rendered to the Government by the railway companies concerned, and it will therefore be unnecessary to make any payments in respect of such transport on the railways taken over."

THE RAILWAY EXECUTIVE COMMITTEE.

On behalf of the Government, the control of the railways in Great Britain was vested, at from Aug. 5th, 1914, in a Committee composed of the following General Managers :—

Mr. J. A. Aspinall	L. & Y. Rly.
Sir A. K. Butterworth .	N.E. Rly.
Mr. Guy Calthrop	L. & N.W. Rly.
Mr. C. H. Dent	G.N. Rly.
Mr. F. H. Dent	S.E. & C. Rly.

The Official Chairman of this Committee is the President of the Board of Trade, and the acting Chairman is Sir H. A. Walker, General Manager of the L. & S.W. Rly. The railway Secretary to the Committee is Mr. Gilbert S. Szlumper.

RAILWAYS IN 1913 and 1914.

The number of persons employed in working the railways of the United Kingdom in 1914 was 643,135, and there were in use 24,818 locomotive engines, 79,539 coaching vehicles, 759,910 waggons for the conveyance of live stock, minerals, and general merchandise, and 49,629 service vehicles.

Capital embarked in Railways.—The total amount of capital authorized by Parliament to be raised for the construction of railways in the United Kingdom amounted on the 31st December, 1914, to £1,447,557,000. Of this sum, £1,341,222,000 (which includes £199,203,000 nominal capital caused by the consolidation or conversion of stocks) exists and forms the capital account of the various railway companies, and shows an increase over the year 1913 of £7,211,000, or 0·6 per cent. The £1,447,557,000 is composed of £124,334,000 guaranteed, £352,168,000 debenture, £358,005,000 preferential, and £493,791,000 ordinary stocks and shares, besides a sum of £12,924,000 raised by loans. The net receipts for the year amount to £50,925,000, equal to 3·80 per cent. on the total capital sunk, as compared with £52,131,000 in 1913, with a corresponding capital of £1,334,011,000, which gave a net receipt of 3·80 per cent. It may be seen, therefore, from the foregoing figures that the total amount of capital raised at the close of the year was over £1,341,222,000, of which about £199,203,000, or approximately 16 per cent., was due to nominal additions. These nominal additions formed approximately 19 per cent. of the ordinary stock, 14 per cent. of the guaranteed and preference, and 12 per cent. of the loans and debenture stocks. The total amounts of capital at the end of 1914 compared with 1913 show an increase of about £727,000 in the ordinary, an increase of £3,208,000 in the guaranteed and preference, and £3,276,000 in the loans and debenture stocks, making a total increase of £7,211,000. Of the total paid-up capital at the end of 1914, ordinary stock formed 37·0 per cent., preferential and guaranteed 35·9 per cent., and loans and debenture stock 27·1 per cent. The average rate of dividend on the ordinary capital was 3·60 per cent. in 1913, as compared with 3·45 per cent. in 1912. The average rate of dividend on the preferential capital fell from 3·56 per cent. in 1912 to 3·52 per cent. in 1913. These rates are naturally lower than they would have been had there been no nominal additions to the capital of the companies. The average rate of dividend or interest computed on the total capital, as it would have stood if no nominal additions had been made thereto, was 4·13 per cent., as compared with the rate of 3·52 per cent. paid on the total capital including nominal additions.

Gross Earnings of the Railways.—The earnings for the year 1914 amounted to £139,098,000, as compared with £139,451,000 for the year 1913, which gives a decrease of £353,000, equal to 0·3 per cent.

The passenger amounts for the year 1913 are as follows:—

	1913.	1912.	Inc. or Dec.

The earnings for the conveyance of parcels, mails, and such other traffic as is generally carried by passenger trains amounted in 1913 to £9,836,000, as compared with £10,026,852 in 1912, being a decrease of £190,852, or 1·1 per cent. The total figures of traffic falling under the heading of "goods" are £66,640,000, as compared with £64,048,814 in 1912—an increase of £2,591,126, or 3·9 per cent. The aggregate is made up of £32,990 from merchandise; £31,972,000 from minerals; and £1,678,000 from live stock. The total quantity of goods carried in 1913 was 568,201,000 tons, as compared with 520,279,126 tons in 1912, showing an increase of 47,921,874 tons, or 8·4 per cent.

Expenditure.—The total working expenses of the whole of the railways for the year 1914 amounted to £88,173,000, equal to 64 per cent. of the gross earnings, as compared with a total of £87,320,000 for the year 1913, equal to 63 per cent. The increase compared with 1913 amounts to £853,000, or 0·9 per cent. The total number of miles travelled by passenger and goods trains during the year 1914 was 430,332,000, or 5,519,000 less than in 1913. Analysing the expenditure, we find the item £18,166,000 for locomotive power; £13,824,000 for repairs and renewals of carriages, &c.; £12,562,000 for maintenance of permanent way, stations, &c.; and £24,180,000 for traffic expenses.

Compensation.—The amount paid for compensation for personal injuries to passengers sustained during the year 1913 amounted to £166,276, and to workmen £298,473. In the movement of goods the companies have paid for damages and losses £740,209, as compared with £573,524 in 1912—an increase of £166,685. We subjoin a statement showing the amounts paid by the principal companies under both heads :—

Net Result of Working the Railways.—As regards the actual net earnings of the companies in 1914, the total gross receipts amounted in the year to £139,098,000, and the total working expenditure to £88,173,000. The net receipts, therefore, amounted to £50,925,000, as against £52,131,000 in the previous year. The proportion of net earnings to capital was 3·55 per cent., as compared with 3·67 per cent. in 1911. The amount of paid-up capital increased during the year by about 3·62. The average rates of dividend paid on the ordinary and preferential capital respectively fell from 3·45 per cent. and 3·52 per cent. in 1912, to 3·87 per cent. and 3·56 per cent. in 1913, the rates on the other classes of capital remaining substantially unchanged.

The following statement compares the average proportion of net earnings to capital in each quinquennial period from 1871–75 to 1906–10 :—

Years.	Proportion of Total Net Earnings to Capital. Per cent.
Average of 1871–75	4·56
,, 1876–80	4·29
,, 1881–85	4·22
,, 1886–90	4·07
,, 1891–95	3·80
,, 1896–1900	3·64
,, 1901–05	3·38
,, 1906–10	3·45

RAILWAY ACCIDENTS.

In 1912 and 1913 the cost per passenger train-mile for personal injury was 0·13*d.* and 0·14*d.* respectively. In loss and damage of goods, the cost in 1912 was 0·91*d.*, and in 1913 0·93*d.* per goods train-mile. The number of personal accidents on railways to passengers, railway servants, and others reported to the Board of Trade during the year show a total of 1,195 killed and 31,239 injured (as compared with 1,194 killed and 33,796 injured in 1913). We will now proceed to investigate under three distinct heads the various causes from which these accidents arose :—

1st. *Accidents to Passengers*—

	Killed.	*Injured.*
1. From accidents to trains, rolling stock, permanent way, &c.	6	323
2. From falling between trains and platforms when entering or alighting from trains	27	1,047
3. From falling off platforms and being struck or run over by trains	14	14
4. While crossing the lines at stations	21	3
5. By the closing of carriage doors	—	683
6. From falling out of carriages during the running of trains	37	75
7. Whilst ascending or descending steps at stations	5	256
8. By being struck by barrows or falling over packages, &c., on platforms	*Killed.* —	*Injured.* 99
9. From falling off platforms on to the ballast	2	76
10. By other accidents caused by the movement of trains	20	296
11. By other accidents on railway premises not due to train accidents or to the movement of trains	2	207

2nd. *Accidents to Servants* in the employ of the railway companies or contractors.—The

ANALYSIS OF RAILWAY WORKING EXPENDITURE.

Year.	Maintenance of Way, Works, &c.	Locomotive Power and Carriage Repairs.	Traffic and General.	Rates, Taxes, and Government Duty.	* Compensation.	Law and Parliamentary.	Steamboats, Canals, Harbours, &c.	Total Working Expenses.

1912	11,707,708	28,950,284	26,816,594	5,422,463	1,025,928	279,076	4,443,277	81,224,343
1913	12,562,165	28,218,647	26,971,317	5,192,210	1,204,958	242,625	4,024,306	78,874,194

* Includes an amount for each year respectively of £162,155, £173,148, £187,682, £228,760, £264,302, £249,961, £288,203, £293,093, £316,070, and £317,470 paid to employees under the Workmen's Compensation Acts, 1897 and 1906.

casualties under this head resulting from accidents to trains, or in which the movement of trains or vehicles used exclusively upon railways is concerned, show that 425 were killed and 5,065 injured during the year, the following being an analysis of such accidents :—

	Killed.	*Injured.*
1. While coupling or uncoupling vehicles	13	563
2. By coming in contact, whilst riding on vehicles, with other vehicles, &c., standing on adjacent lines	4	24
3. While passing over, under, or standing on buffers	—	11
4. When getting on or off, or falling off, engines, waggons, &c.	10	246
5. While braking, spragging, or chocking wheels	9	605
6. While attending to ground-points	2	119
7. While moving vehicles by capstans, turn-tables, props, levers, &c.	6	512
8. By other accidents not included in the preceding	45	675
9. From falling off trains, engines, &c., in motion	5	38
10. When getting on or off engines, vans, &c., during the running of trains	5	188
11. By coming in contact with overbridges or erections on the sides of the line	8	35
12. While attending to the machinery, &c., of engines in motion	2	685
13. While working on the permanent way, sidings, &c.	81	107
14. While attending to gates at level crossings	2	1
15. While walking, crossing, or standing on the line :		
(*a*) Fog-signalmen	1	1
(*b*) 1. On duty at stations	90	142
2. On duty elsewhere	39	45
3. Going to or from work	30	36
16. From being caught bet. vehicles	21	85
17. From falling or being caught between trains and platforms, walls, &c.	7	45
18. Miscellaneous	37	787
19. From accidents to trains, rolling stock, permanent way, &c.	8	115
Total	425	5,065

In addition to these accidents, other casualties, in which the movement of vehicles used exclusively upon the railways are not concerned, have occurred, viz., 6 killed and 5,066 injured whilst loading, unloading, or sheeting waggons, 4 killed and 559 injured while working at cranes or capstans, 11 killed and 898 injured by falling off platforms, ladders, scaffolds, &c., in addition to a large number of accidents from various other causes, either the result of want of caution or misconduct.

3rd. *Accidents to Persons other than Passengers or Servants.*—Under this head is classed casualties whilst passing over railways at level crossings; this caused 59 deaths and 39 injuries in 1914 (as compared with 64 deaths and 46 injuries in 1913). There were 225 deaths and 105 injuries resulting from persons trespassing on the railways, and 197 persons committed suicide upon the lines in 1914 (as compared with 208 in 1913).

The Cheap Trains Act, 1883, provides that fares not exceeding the rate of one penny per mile shall be exempt from duty, but fares for return or periodical tickets shall be exempt from duty only where the ordinary fare for the single journey does not exceed that rate. Duty shall be payable at a reduced rate of 2 per cent. on fares exceeding the rate of one penny a mile between stations within one urban district. Such district will contain not less than one hundred thousand inhabitants, and must be of a

NOTABLE RAILWAY ACCIDENTS SINCE 1853 RESULTING IN GREAT LOSS OF LIFE.

Date.	Company.	Nature of Accident.	At	Number Killed.
Oct. 5, 1853	Glas. & S. W.	Collision with goods	Strattan	16
Aug. 25, 1861	L. B. & S. C.	Collision	Clayton Tunnel	23

Midland Great Western	5.58	Mullingar	Dublin	1 14	50	40·5

continuous urban as distinguished from a rural or suburban character.

Officers or men in the military or police forces, when travelling on public service, are charged three-fourths or one-half of ordinary passenger rates, according to number travelling. The Act does not extend to Ireland.

Hiring of Special Trains.—Although the majority of railway companies have no fixed charges for hire of special trains, the general charges are five shillings per mile, plus the ordinary fare for each passenger according to class of vehicle hired. The railway companies, however, reserve to themselves the right to make whatever charges they may think fit in accordance with circumstances of hiring special trains.

The Workmen's Compensation Act, 1897.—This Act, which received the Royal assent on August 6, 1897, came into operation on July 1, 1898. The amount paid for compensation under this Act

* Worked by the South Eastern and Chatham Companies, which see.

a Preferred; deferred, £100.

b Including the estimated amount receivable by the Companies under agreement with the Government.

to railway employees during the year 1913 was £318,564, and for amounts paid during previous years see note on page 861.

THE RAILWAY CLEARING HOUSE.

THIS Institution was opened in Jan. 1842, and in addition to the work of clearing through bookings of passenger and luggage traffic, is the medium through which agreements relating to rates and fares, &c., are arrived at. *Chairman*, H. W. L. Harford; *Secretary*, H. Cuff Smart; *Offices*, Seymour Street, N.W.

Indian Railways.

THE construction of Railways in India commenced in 1853, and the total length open on 31st March, 1914, was 34,656 miles. They are controlled by a Board consisting of a Chairman and two members. The present Chairman is Hon. R. W Gillan; and the two members are Mr. A. R. Anderson and Mr. Couchman. The Administration Reports on Indian Railways hitherto published have had reference to the working of each calendar year, the last report issued being that for the year 1912. Owing to the adoption, by the principal railway administrations, of the Government financial year for all accounts and statistical purposes, the reports will henceforth be published for the Government financial year, which begins on April 1; and the present report accordingly deals with the transactions of the year April 1, 1913, to March 31, 1914. The capital outlay was Rs. 4,95,08,64,000. The gross receipts for 1913–1914 amounted to Rs. 63,58,56,000; the working expenses to Rs. 32,93,04,000, or 51·79 per cent. of gross receipts. The net revenue amounted to Rs. 30,65,52,000, which gave a return of 6·19 per cent. per annum upon the capital invested. The net gain to the Government for the years 1913 and 1914 is Rs. 8,55,85,694. The number of passengers conveyed in the year was over 436,697,400, and the total weight of goods carried was 86,977,000 tons. The Indian Railways have in their service 633,694 employees, of whom 7,988 are Europeans, 10,437 Anglo-Indians, and 615,269 Indians. The number of servants killed and injured during the year from all causes was 480 killed and 845 injured; passengers, 268 killed and 815 injured; other persons, 1,590 killed and 482 injured; total, 2,338 killed and 2,142 injured.

Indian Railways.

STATEMENT OF CAPITAL, REVENUE, DIVIDENDS, &c. YEAR 1913 AND 1914.

In the year 1894 an Act was passed making it legal for Indian Railway Companies to pay interest out of capital during construction, subject to the Secretary of State's specific sanction, and to certain other conditions.

1914	486	1,723,550
1915	432	1,536,177

DESCRIPTION OF VESSELS BUILDING IN THE UNITED KINGDOM IN 1875 AND 1915 RESPECTIVELY.

Date.	STEEL.				IRON.				WOOD.				TOTAL.			
	Steam.		Sail.		Steam.		Sail.		Steam.		Sail.		Steam.		Sail.	
	No.	Tons Gross	No.	Tons Gross.	No.	Tons Gross.	No.	Tons Gross.	No.	Tons Gross	No.	Tons Gross.	No.	Tons Gross.	No.	Tons Gross.
*30 Sept. 1875	...	...	...	...	4	162,325	110	105,081	6	1,065	173	36,103	150	163,390	283	141,184
30 Sept. 1915	429	1,535,507	2	570	...	...	...	...	...	...	1	100	429	1,535,507	3	670

*The figures for this date include vessels preparing, but not actually commenced.

These figures show that the average size of vessels building at the present time is over 5 times that of vessels built forty years ago. Then, steel was not used for shipbuilding purposes; now, it has entirely supplanted iron. Then, the tonnage in hand was equally divided between steamers and sailing vessels; now, the proportion of sailing to steam tonnage is insignificant.

MERCHANT AND OTHER VESSELS (not Warships) LAUNCHED IN EACH OF THE PRINCIPAL SHIPBUILDING DISTRICTS OF THE UNITED KINGDOM DURING 1914.

District.	Steam.		Sail	
	No.	Gross Tons.	No.	Gross Tons.
Barrow, &c.	1	284	...	...
Belfast	21	239,819	...	...

N.B.—The above list embraces all shipowners recorded on June 30, 1915, in *Lloyd's Register of Shipping*, with a total gross tonnage of not less than 20,000 tons each. Several of the British coasting services given have been included irrespective of their total tonnages.

Our thanks are due to the owners, agents, and shipbuilders who have furnished us with information, and also to the Secretary of *Lloyd's Register of British and Foreign Shipping*.

Merchant Steamers of All Nations.

The following list has been compiled from *Lloyd's Register* (30th June, 1914), and includes (*a*) All large steamers of 9,000 tons upwards; (*b*) All steamers not under 20 knots; (*c*) All 19-knot steamers of 1,500 tons upwards; and (*d*) All steamers of 16 knots upwards not under 3,000 tons.

ABBREVIATIONS.

Arg. = Argentine; Aust.-H. = Austro-Hungarian; Bel. = Belgian; Br. = British; Brz. = Brazilian; Chl. = Chilian; Chn. = Chinese; Cub. = Cuban; Dan. = Danish; Fr. = French; Ger. = German; Grk. = Greek; Hol. = Netherlands; Itl. = Italian; Jap. = Japanese; Nor. = Norwegian; Por. = Portuguese; Rou. = Roumanian; Rus. = Russian; Sp. = Spanish; Swd. = Swedish; U.S. = United States; ‡ = Paddle steamer; ◊ = Turbines; TR = Turbines and Reciprocating; **=Twin screws; ***=Triple screws; ****=Quadruple screws; N.R.=No record yet; * = Under 12.

Lines, Ltd., and Wilson Line, 1 each.

N.B.—There were on 30 June, 1915, about 3,091 steamers in the world capable of a sea-speed of at least 12 knots per hour. Of the total number about two-thirds are ocean-going steamers.

LARGEST SHIPBUILDERS, 1914. LARGEST ENGINE BUILDERS, 1914.

Owing to some returns including large output of war-work, particulars of which cannot be divulged, the usual lists are not given. Had they been published, the following names would have been added to those given in WHITAKER'S ALMANACK, 1915 (*see* page 886):—

Shipbuilders.—Sir James Laing & Sons; Barham & Sons; and Sunderland Shipbuilding Co., all of Sunderland; and Earle's Shipbuilding and Engineering Co., Hull.

Engine Builders.—Palmer's Shipbuilding and Iron Co., Jarrow; Scott's Shipbuilding and Engineering Co., Greenock; and Earle's Shipbuilding and Engineering Co., Hull.

EVOLUTION OF THE STEAMSHIP ON THE NORTH ATLANTIC.

For further details *see* WHITAKER'S ALMANACK, 1915, p. 870.

Owing to recent inventions passengers enjoy greater immunity from accidents, 2,939 steamers being now fitted with installation of wireless telegraphy, and 947 with submarine signalling apparatus.

As the size of steamships increased, the heavy cost of construction necessitated the establishment of Corporations, with great strength of capital, which control the principal ocean routes.

The fleets of the 75 largest shipowners in the world, each one not under 100,000 tons (*see* page 839) aggregate 17,390,000 tons (British 9,469,000 tons). The 26 next in size (not less than 80,000 tons each—*see* page 839) aggregate 2,266,000 tons (British 1,046,000).

These 101 owners show a total of 4,391 vessels, 19,656,000 tons, almost 43 per cent. of the entire shipping of the world).

In 1814 the steamboats of all kinds registered in the United Kingdom amounted to less than 1,000 tons, increased to nearly 8,000 tons by 1820. There were 766 British steamers afloat in 1838, in all just short of 150,000 tons. The invaluable Register Book which is published by the Committee of Lloyd's Register of British and Foreign Shipping shows that on June 30, 1915, the steamship empire-builders of Greater Britain owned 10,218 vessels, 20,830,918 gross tons, exclusive of 1,135 ships (443,150 tons) belonging to the dwindling disciples of time-honoured canvas. The total for the world was: Steam, 45,729,208 tons; and sail, 3,532,561 tons.

LARGEST STEAMERS FITTED WITH REFRIGERATING APPLIANCES.

Built in	Name.	Gross Tonnage.	Speed.	Insulated Cargo Chambers.		Owners.
				No.	Capacity, cubic ft.	
1915	Armagh	9,220	...	12	437,000	Union SS. Co. of N. Zealand.
1915	Northumberland	9,000	15	12	437,000	Federal Steam Nav. Co., Ltd.
1911	El Uruguayo	8,361	15	33	400,000	Brit. & Ar'tine S. Nav. Co., Ltd.
1912	La Rosarina	8,332	15	35	440,000	" " "
1912	El Paraguayo	8,508	15	33	399,613	Houlder Line, Ltd. "
1913	La Negra	8,312	15	35	395,400	Brit. & Ar'tine S. Nav. Co., Ltd.
1912	Hurunui	10,644	14	7	390,000	New Zealand S. Co., Ltd.

N.B.—There were on 30 June, 1915, 896 vessels fitted with refrigerating apparatus; of these 285 each had insulated chambers, with a capacity of not less than 80,000 cubic ft., and 43 had each not less than 250,000 cubic ft., and 48 had each not less than 300,000. Particulars of those with a capacity not less than 390,000 cubic ft. are given above.

LARGEST STEAMERS FITTED FOR LIQUID FUEL.

Tenyo Maru, 13,459 tons; Chiyo Maru, 13,431 tons (Toyo Kisen K.K.); Niagara, 13,415 tons (Union S.S.C. of N.Z.); *San Melito, 10,160 tons; *San Hilario, 10,157 tons; Standard, 10,073 tons (Standard Oil Co., New Jersey); *San Jeronimo, 10,067 tons (Eagle Oil Transport Co., Ltd.); *Matsonia, 9,728 tons (Matson Nav. Co.); San Nazario, 10,064 tons; San Onofre, 9,717 tons; San Patricio, 9,712 tons; *San Lorenzo, 9,607 tons; *San Gregorio, 9,594 tons; San Fraterno, 9,587 tons (Eagle Oil Transport Co., Ltd.). Those marked * are fitted for the carriage of petroleum in bulk. There were on June 30, 1915, 413 vessels fitted for liquid fuel, of which 141 were over 5,000 tons, and 92 under 1,000 tons each. Those with a gross tonnage exceeding 9,500 tons each are given above. Great development is taking place in the use of oil fuel instead of coal.

Carriage of Petroleum in Bulk.—396 steamers and 55 sailing ships were engaged in carrying petroleum in bulk; the largest of these not fitted for liquid fuel were the Jupiter, 10,073 tons; and Wilhelm A. Riedemann, 9,800 tons (Deutsch American Petroleum Co.); John D. Rockefeller, 8,400 tons; John D. Archbold, 8,374 tons; and Muskogee, 7,225 tons (Standard Oil Co. of New Jersey).

FASTEST OCEAN-GOING STEAMERS IN THE WORLD, NOT UNDER 20 KNOTS.

In order of Speed.—Mauretania, Aquitania, France, Vaterland, Imperator, Kaiser Wilhelm II., Kronprinz Wilhelm, Kronprinzessin Cecilie, Campania, Olympic, Princess Margaret, La Provence, Empress of Asia, Empress of Russia, Isis, Osiris, Wahine, La Lorraine, La Savoie, Harvard, Yale, Calgarian, Empress of Britain, Salsette, Gallia, Lutelitia, Massilia, Charles Roux, Chiyo Maru, Shinyo Maru, Tenyo Maru, City of Detroit III., Massachusetts, New York, Old Colony, Philadelphia, St. Louis, and St. Paul.

FASTEST SHORT-TRIP STEAMERS.

In order of Speed. Paris, Ben-my-Chree, Jan Breydel, Pieter de Coninck, Princesse Elisabeth, Stad Antwerpen, Ville de Liège, Connaught, Leinster, Munster, Ulster, Vindex, Newhaven, Rouen, Dieppe, Empress, Engadine, Invicta, Onward, Riviera, St. Andrew, St. David, St. George, St. Patrick, Victoria, Viper, Leopold II., Marie Henriette, Princesse Clementine, Mecklenburg, Orange Nassau, and Prinsess Juliana, all not under 22 knots.

LARGEST STEAMERS IN THE WORLD.

In order of Size.—Bismarck, Vaterland, Imperator, Britannic, Olympic, Aquitania, Columbus, Statendam, Mauretania, George Washington, Kaiserin Auguste Victoria, Adriatic, Rotterdam, Baltic, France, Amerika, Duilio, Cedric, Celtic, Minnesota, William O'Swald, Kronprinzessiu Cecilie, Caronia, Carmania, Cap Polonio, Kaiser Wilhelm II., Tirpitz, Lapland, Alsatian, Ceramic, President Lincoln, Franconia, Laconia, President Grant, Calgarian, Northland, Berlin, Nieuw Amsterdam, Prinz Friedrich Wilhelm, Cleveland, Empress of Asia, Empress of Russia, Victoria Luise, Cincinnati, Andes, Orduna, Alcantara, Almanzora, Zeppelin, Arlanza, and Massilia, all 15,000 tons and above.

PUBLIC SCHOOLS' SCHOLARSHIPS.

BRIGHTON COLLEGE.

The Entrance Scholarship Examination will be held on the 6th and 7th of June. Scholarships of £70, £60, £50, and £45 will be awarded. Candidates must be under 15 years of age on the 1st of June. For particulars apply SECRETARY, THE COLLEGE, BRIGHTON.

KING'S SCHOOL, CANTERBURY.

See also p. 23.

Some fourteen Scholarships are offered for competition twice annually, in June and November. A King's Scholarship is tenable with an Entrance Scholarship, so that a boy may at entrance win scholarships to the value of £55 15s. a year for five years. Full information from HEADMASTER, KING'S SCHOOL, CANTERBURY.

MALVERN COLLEGE.

Entrance Scholarship Examination early in June. One or two £87 (£99 for the first year), Five of £50, and Five or more of £30 per annum. Exhibitions, value £12 to £25 per annum, may be awarded boys who do well but fail to obtain scholarships. Apply to THE HEADMASTER, or BURSAR, THE COLLEGE, MALVERN.

SEDBERGH SCHOOL.

Entrance Scholarship Examination in May or June in London and Sedbergh. Six Scholarships (£70 to £25) are offered. House Exhibitions may be awarded to deserving candidates who fail to obtain scholarships. Exhibitions of Honour (£75) are offered to the sons of those who have fallen in the war. Apply to the BURSAR, SEDBERGH SCHOOL, YORKS.

BLUNDELL'S SCHOOL, TIVERTON.

Ten Scholarships of £40 to £20, and others of less value, will be offered for competition on June 8th, 1916, and the following days. University Endowment, £600 a year. Apply to the HEADMASTER or SCHOOL SECRETARY.

UPPINGHAM.

An Examination will be held in June, 1916, for about Seven Scholarships, varying from £55 to £30 per annum. House Exhibitions also, where the candidates make it desirable, are awarded by the same examination. Allowance is made for age, which must not exceed 15 on Sept. 20th, 1916. Apply to THE HEADMASTER, UPPINGHAM, RUTLAND.

EDUCATION.

MESSRS. GABBITAS, THRING & CO.,

36, Sackville Street, Piccadilly, W.,

have a Department specially organised for **advising** Parents and Guardians as to the best **Educational Establishments** for **Boys** and **Girls** in the United Kingdom or on the Continent. The Firm have had experience as Educational Agents for forty years, and during their long career have been instrumental in sending Masters and Tutors to the leading Schools and Tutors' Establishments, and are in the closest touch with all educational matters. They can give, FREE OF CHARGE, to the Parent or Guardian information and advice as to—

SCHOOLS FOR BOYS OR GIRLS
TUTORS' ESTABLISHMENTS
EDUCATIONAL HOMES
} **EITHER AT HOME OR ABROAD.**

To enable the Firm to advise efficiently it is necessary that *full particulars should be given*; especially as to the age of the Pupil, previous education, and present standard of attainments, special subjects of study, locality, whether a large or small establishment is preferred, and the fees it is intended to pay.

The Firm also can assist in procuring the services of Private Tutors and Governesses, Resident, Travelling, Non-Resident, or Visiting, of whom they always have a large number on their Lists.

Transfers of and **Partnerships** in **Boys'** and **Girls'** Schools are also negotiated.

Masters, Tutors, and Governesses seeking Posts can have a Prospectus on application, free of charge.

Fees.—14 to 16 guineas per term.

BEXHILL-ON-SEA

(Sussex). The Medical Officer of Health writes:—"Bexhill has always been celebrated for the longevity of its inhabitants. The death-rate for 1913 here was only 9·47. The town holds a first place among health resorts, owing to the general salubrity of the climate, genial influences of invigorating breezes and brilliant sunshine, perfect drainage, the purity of its water, and its freedom from epidemics. The sea-bathing is excellent. Residence at Bexhill is very beneficial in anæmia, scrofula, and tuberculous complaints, and in diseases of the respiratory organs, which may be sent here with advantage during the greater part of the year. Especially suitable for convalescents and delicate children." Golf links, 18 holes. Pop. 15,330. Sunshine (1914), 1,928 hrs.

GIRLS.

Illustrated Prospectus and List of Successes on application.

Fees.—£75 per annum.

PARKSTONE—*see* p. 33.
SOUTHBOURNE—*see* p. 35.

BOURNEMOUTH.

The Medical Officer of Health writes :—"Bournemouth is built on a sandy subsoil, the dry and porous nature of which makes it an ideal site for a health resort. Whilst the thousands of pine trees constitute a physical feature of great beauty, their effect is hygienic as well as æsthetic, for the emanations from the myriad pine-needles have an undoubted purifying effect on the atmosphere." The public gardens are very extensive, and excellent facilities are provided for golf, bowls, croquet, and tennis. Sunshine (1914), 1,841 hrs. Pop. 78,674.

GIRLS.

FONTAINBLEAU SCHOOL,
MANOR ROAD.

This School, on the bracing East Cliff, provides for 30 or 40 girls of good family such training and educational advantages as may enable them to realise and fu fil their responsibilities to Home, Church, and Empire. Entire charge Foreign and Colonial Children.

BROADSTAIRS.

The Medical Officer of Health writes :—"Broadstairs is built on the cliffs half-way between Ramsgate and Margate. Aspect, S.E. The town, which is built upon high land on a subsoil of chalk, thus enjoying the advantages special to this geological formation, has no northerly aspect and is sheltered from cold winds. It is peculiarly fortunate in climatic fluctuations. Remarkably free from fogs and mists. Unusually high record of bright sunshine. The climate is equable and dry, bracing in summer and mild in winter, suitable for invalids and delicate children throughout the year. The drainage system is excellent, and the water-supply pure and abundant." Sunshine (1914), 1,992 hrs. Pop. 8,929.

BOYS.

DUMPTON HOUSE.

Pupils prepared usual Examinations.

Cycling, Tennis, Hockey, Bathing.

Foreign Pupils received at inclusive fees.

Fees.—12 to 16 guineas per term.

EASTBOURNE.

The Medical Officer of Health writes:—"Its advantages as a health resort are much sunshine, clean, quickly-drying roadways, large parks and gardens with many trees, a plentiful and good water-supply from wells sunk in the deep chalk, and the proximity to the breezy, health-giving South Downs. The climate is beneficial for convalescents and in anæmia, scrofula, and *early* tubercular disease; excellent for children. Full benefit of winter sun is secured. Beachy Head breaks S.W. winds, and diverts much rain, dryness of soil being promoted by great porosity of chalk. Always at or near the top for sunshine in official records." Sunshine 1,949 hrs. Pop. 52,542.

BOYS.

ST. BEDES.

PREPARATORY SCHOOL FOR THE PUBLIC SCHOOLS AND ROYAL NAVY.

Officers' Training Corps. Sanitation certified. *Fees.*—£42–£51.

FOLKESTONE.

The Medical Officer of Health writes:—"Aspect, S. & S.E. The town is one of the best-planned seaside resorts. The comparatively very healthy and dry climate is due to the porous nature of the geological formation, and, in addition, the facilities for drainage make mists, damp and fogs almost unknown. The water-supply is constant, and the water exceedingly pure. The sanitation of the town is carefully guarded, and precautions taken from time to time to maintain its efficiency. For an educational centre it is particularly adapted." Sunshine (1914), 1,925 hrs. A fashionable holiday resort, residential town, and cross-Channel packet station, close to Shorncliffe Camp. One and a half hours from London, modern Folkestone stands on a lofty cliff on the Kentish coast, facing the Straits of Dover.

Fees moderate and inclusive

HERNE BAY.

The Medical Officer of Health writes:—"Herne Bay has been described by the Registrar-General as 'the healthiest seaside resort in England.' The death-rate is exceedingly low, and its climatic conditions are such that, while its winters are mild, the hot weather during the summer-time is tempered by the cooling breezes from the North Sea. Analysis of the water proves the same to be of the very highest degree of purity and without any trace of contamination. The drainage of the town is new. Herne Bay is in every way suited as a resort for either educational, health, or residential purposes." Pop. 7,780.

GIRLS.

WESTCLIFF HOUSE,

ST. GEORGE'S TERRACE.

HOME SCHOOL FOR GIRLS AND KINDERGARTEN.

Principal - Miss KELLETT, L.L.A.

Thorough modern education combined with advantages of comfortable, refined home. Conducted on Public School principle. Individual attention. Preparation for usual Examinations.

Entire charge pupils from abroad.

Fees.—17 to 19 guineas per term.

HOVE,

52 m. from London (L.B. & S.C. Rly.), is a fashionable residential resort, built on a gentle slope at foot of South Downs, on south coast of Sussex, immediately adjoining Brighton on the west, many advantages enjoyed by the latter town being equally applicable to Hove. Sunshine (1914), 1,978 hrs. Pop. 42,173.

The Medical Officer of Health writes:—"The climate of Hove is singularly dry and fresh, being open to the bare Downs on the north and the sea on the south. There is nearly always a good breeze, which in fine weather blows off the sea by day and off the Downs at night, thus preventing any feeling of oppressive heat or intense cold. London's foggy days are generally fine and sunny at Hove. It is specially recommended for those suffering from overwork or too active life in a busy town, and as a bracing change from the damper climate of the south-west of England. The humidity of the air is as low as 50 to 60 per cent. in the summer; the ground dries rapidly after rain."

GIRLS.

SHREWSBURY HOUSE SCHOOL,

BRUNSWICK PLACE.

Senior and Junior Divisions.

Languages, Art, Science (Lantern Lectures), Music, Cookery, Dressmaking, Hockey, Tennis, Riding, Driving, Swimming.

Highly qualified Staff of Resident English, French, and German Mistresses. Visiting Masters from London and Brighton.

Close to Sea, healthiest part. *Playing Field.*—Tennis, Cricket, &c. Gymnasium, Riding, Swimming, Cycling.

GIRLS.

ST. CATHERINE'S SCHOOL,

32, THE DRIVE, HOVE.

Principal - - Miss WALTON.

(Nine years Assistant Mistress and Head of the Training Department for Teachers at the Exeter High School for Girls.)

Aim.—To give thorough education on modern lines. Special attention paid to Spoken French, Music, Elocution, Physical Culture and Outdoor Games, Tennis, and Lacrosse.

Pupils prepared for Cambridge Higher Local Examinations. Many distinctions gained.

Entire charge Pupils whose parents are abroad.

Fees.—From 60 guineas per annum.

HUNSTANTON-ON-SEA.

The Medical Officer of Health writes:—"Hunstanton shares with all the East Coast watering-places a great reputation for convalescents. Apart from this, Hunstanton seems specially adapted for children. The rapidly-drying soil, the absolutely safe bathing, the magnificent sands for exercise in wet or dry weather, perfect drainage, and splendid water, combine to make it an ideal place for them. The number of schools and the wonderful physical progress of weakly children bear testimony to these advantages."

This quiet East Coast health resort stands on the north-west coast of Norfolk, facing the Wash, between Cromer and King's Lynn. Pier, 800 feet in length. Golf Links, 18 holes. Pop. 2,511. G. E. Rly.

BOYS.

THE GLEBE HOUSE.

Candidates are also prepared for the Universities and for Woolwich.

The College is affiliated to the London University for Examination purposes.

Address: The Master of Seafield,

W. ARTHUR RIX, M.A. (Cantab.)

LEICESTER.

The Medical Officer of Health writes:—"The county town of Leicester is situated on the Soar, a tributary of the Trent. The total area of the borough is 8,582 acres, and the portion built upon extends about three miles in each direction. The altitude varies from over 300 feet to 165 feet above sea-level. It is a very healthy town, the general death-rate being remarkably low. Infant mortality, which was at one time excessive, has been greatly reduced in the last decade."

GIRLS.

GRANVILLE SCHOOL FOR GIRLS.

Headmistress - - - Miss RICH
(Member of Somerville College, Oxford, M.A. Dublin).

Stands in good position in the healthiest suburb of Leicester, facing Victoria Park (70 acres), with a view of Charnwood Forest.

MALVERN

(Worcester.) **The Medical Officer of Health writes**:—"Malvern is picturesquely situated on the eastern and western slopes of the range of Malvern Hills, with extensive and magnificent views on both sides. The hills, which rise to an altitude of 1,400 feet. are easily accessible for delicate persons, either on foot or by carriage. The climate has a most beneficial effect on invalids. The houses are so placed as to receive more than the ordinary amount of sunshine. Weakly children, especially those suffering from tubercular glands or continually recurring catarrhs, in nearly all cases do remarkably well here. The rainfall is low, and the soil dries with remarkable rapidity. The water-supply is bountiful and of great purity, and the sanitary state of the district generally of a high standard. The average annual (corrected) death-rate for the past five years is 10.5 per 1,000 of the population. Outbreaks of infectious diseases are few and quickly suppressed, as the Urban Council are provided with every means for promptly dealing with any case that may arise."

Malvern is an inland watering-place and a pretty residential town, consisting mostly of villas standing in own grounds. Assembly rooms (high-class bands and theatrical companies), free library, gentlemen's club, tennis, bowls, croquet, golf links (9 and 18 holes), separate clubs for ladies and gentlemen. Pop. 8,106.

Games, Drill, Gymnastics, Safe Bathing, Excursions.

Fees.—20 to 32 guineas per term.

LYTHAM

(Lancs.). The Medical Officer of Health writes:— "Climate mild, water supply pure and abundant; beach sandy; drainage modern; bandstand, pavilions, steamers, sea-bathing. 'Leafy Lytham.' Residential district suitable for lung, heart, and rheumatic patients." Pop. 9,463.

BOYS. **LYTHAM COLLEGE.**

HIGH-CLASS HOME-SCHOOL.

Aim.—To prepare Boys thoroughly for Commercial or Professional life.

Sunny climate, bracing sea air. Specially suitable for growing boys and those who are liable to chest affections.

All the usual Games.

Delicate or Backward Pupils receive every care and individual attention.

Entire Charge taken of Pupils whose Parents are abroad.

Illustrated Prospectus, &c.

Principal—JOHN H. WATTERSON, F.R.G.S.

MARGATE

(Kent). The Medical Officer of Health writes:— "Nearly three thousand children are sent yearly to Margate for their education. The chief reason for the world-wide reputation of Margate as a health resort appears to be: Its dry, bracing climate; it has the smallest rainfall in England." Hours of sunshine (1914), 1,807. Pop. 27,085.

GIRLS. **QUEEN'S SCHOOL,**

9, 10, & 11, DALBY SQUARE, CLIFTONVILLE.

Principal - Mrs. J. W. WALTON, L.L.A.

To give Girls Useful, Liberal Education of Highest Class.

EXCELLENT SUCCESSES IN MUSIC AND FRENCH.

Special attention to ORPHANS, MOTHERLESS CHILDREN.

Each pupil's future position considered.

Pupils over 13 taught DOMESTIC DUTIES and Cooking. Household arrangements based on home principles. Unlimited Diet.

Basket Ball, Badminton, Tennis, and Croquet.

ORPINGTON.

DOWNE, near Orpington, Kent.

Downe is 4 miles from Orpington, and 7 miles from Bromley (S. E. & C. Rly.). The air is particularly bracing, and the district (Garden of Kent) is well known to be one of the healthiest in England. Pop. 5,036.

GIRLS. **DOWNE HOUSE.**

NEAR ORPINGTON.

FIRST-CLASS SCHOOL FOR GIRLS.

Principal - Miss OLIVE M. WILLIS, M.A.

Fully-equipped Teaching Staff of Resident and Visiting Mistresses.

Aim.—To train mind and body, equip every girl for her position. Individual character, abilities, physical requirements studied.

Curriculum.—Thoroughly comprehensive, embraces English Subjects, Languages, Art, Science, Mathematics, Dancing, Gymnastics.

Premises.—Fine Country House. 23 acres for Recreation—Lacrosse, Cricket, Tennis Lawns. Sanitary arrangements excellent.

Fees.—50 guineas per term.

PAIGNTON.

The Medical Officer of Health writes:— "Situated at the head of Torbay, with Torquay to the north and Brixham to the south, Paignton has the bracing aspect of the east combined with the softening influence of the southern climates. Snow and frost rare. Sunshine (1914), 1,749 hrs."

GIRLS.

ST. PETROX SCHOOL.

Principal - Miss WRIGHT.

MODERN BOARDING AND DAY SCHOOL FOR DAUGHTERS OF GENTLEMEN.

Premises.—Detached, close to sea.

Aim.—To train girls to become useful and cultivated members of society, and to develop them evenly on all sides—moral, intellectual, and physical.

School Course includes usual English subjects, Natural Science, French, Drawing, Plain Needlework, Class Singing, and Drill.

Particularly suitable for children from India and the Colonies.

Fees.—18 to 24 guineas per term.

PARKSTONE

(Dorset). The Medical Officer of Health writes:— "Climate is similar to Bournemouth, but owing to salt breezes, is cooler in summer and warmer in winter. Admirably adapted to growing children, especially from hot countries."

BOYS. **DANE COURT.**

PREPARATORY FOR BOYS OF 6–13 YEARS.

Principal - - HUGH F. POOLEY, M.A.

(*Rugby and University College, Oxford*).

Assisted by Competent Staff.

Situate in grounds, 3½ acres, with Playing Field, 3 acres. Sandy soil. Large, airy rooms.

Special attention Modern Languages, Mathematics, and Science. Games amply provided for.

Fees.—From 42 guineas per annum.

SEAFORD.

The Medical Officer of Health writes:—"Pop. 5,358. On the Sussex coast, 58 m. from London, between Brighton and Eastbourne. L.B. & S.C. Rly. Climate of Seaford is equable, but bracing for south coast health resort. Never very cold in winter, and summer heat always tempered by cool sea breeze, so that hottest days in summer are not relaxing. The climate is dry, rainfall being small and, owing to chalky subsoil, quickly absorbed. There is a large amount of sunshine enjoyed, and nothing to intercept it. Golf, two clubs, each with gentlemen's links (18 holes) and ladies' course."

BOYS.

NEWLANDS,

SEAFORD, SUSSEX.

Mr. WILLIAM A. WHEELER, B.A.
(*Keble College, Oxford*),
Mr. J. M. HAY GRANT, B.A.
(*Emmanuel College, Cambridge*),
With Assistant Masters, prepare BOYS (8–14) for Public Schools and Royal Navy.

USUAL COURSE OF INSTRUCTION.—Scripture, English, French, Latin, Greek or German, and Mathematics.

Playing Field (4 acres). Boys' games carefully organized. Drilling, Boxing, Dancing.

Mrs. Hay Grant takes special and personal care of the health and comfort of the boys.

BOYS.

LEXDEN HOUSE SCHOOL,

SEAFORD, SUSSEX.

Principal - F. C. B. WELCH, B.A.

Boys between 8 and 14 specially prepared for Public Schools and Osborne College.

The Buildings, specially erected, stand in 6 acres ground on Downs. Three-quarters mile from Sea, hence Down and Sea Air combined. Rooms large, well ventilated. Sanitary arrangements certified perfect. Usual Curriculum. Religious Instruction part of regular teaching. Work varied hourly, mostly done in morning, not exceeding two hours consecutively. Playing Field. Experienced Matron. Large Play Room and Swimming Bath.

SOUTHBOURNE.

The Medical Officer of Health writes:—"The air is fresh and pure, the climate equable, and the combination of pineland and sea make it a beautiful as well as a health-giving resort." The quiet little place is the eastern extension of Bournemouth, but more bracing.

GIRLS.

KING'S CLIFFE.

HOME SCHOOL FOR DAUGHTERS OF GENTLEMEN.

Principal - - Miss L. WOTTON.

Building detached, on gravel soil. Near Sea.

School Course includes Divinity, English, Latin, French, Mathematics, Theory and Harmony of Music, Class Singing, Drawing, and Painting.

Pupils prepared for usual Examinations. Successes gained in London Matriculation and Piano Examinations, R.A.M. and R.C.M.

Tennis, Hockey, Swimming, Cycling, Swedish Drill.

Entire charge of Foreign and Colonial pupils.

SOUTH MOLTON

(Devon). The Medical Officer of Health writes:—"The district is hilly, the climate bracing. The geological formations are millstone grits and sandstones. Rainfall about 40 inches. Old people, those returning from the tropics, and children do well in this climate." Pop. 2,742.

BOYS.

WEST BUCKLAND SCHOOL.

Headmaster - Rev. E. C. HARRIES, M.A.

School.—Founded in 1858 by the late Earl Fortescue and Prebendary Brereton. A Public School for Professional and Middle-class people. Moderate Fees.

Aims.—To prepare Boys for Professional and Commercial careers.

Situation.—Entirely rural, elevation 650 ft. Most healthy.

Building.—Suitably adapted for 120 Boys (Boarders).

Athletics.—Encouraged. 20 acres. Officers' Training Corps.

India and Colonies.—Boys met. Entire charge undertaken.

SOUTHPORT

(Lancs). The Medical Officer of Health writes:—"Southport is, by its character as a modern 'Garden City,' eminently suited as a place for schools. All its houses, detached or semi-detached, have their own gardens. Its soil is sandy, clean, and dry. The streets are broad, well kept, and planted on each side with trees. The air, generally from the sea, is clean, pure, and of even temperature. The water-supply is a public one, excellent in quality and quantity."

BOYS.

SOUTHPORT MODERN SCHOOL.

A FIRST-CLASS BOARDING SCHOOL FOR BOYS.

In a most beautiful and healthy seaside town. Splendid buildings, specially constructed for scholastic purposes. Hygienic arrangements perfect. Excellent staff. Individual attention. Boys prepared for Business or Professional Life, and for the Universities. Numerous Honours and Distinctions at Examinations. Physical Culture, Games, Swimming Club, Cadet Company.

Principal—
Major J. C. UNDERWOOD, A.C.P., F.R.G.S.

GIRLS.

STONEYCROFT,

BIRKDALE.

Principals—
Miss DAVIES and Miss E. DAVIES, L.L.A.

Four girls who proceeded direct from school to College three years ago graduated in Honours at various Universities last year. Hockey, Cricket, Tennis, Swimming, Boating, Riding.

Fees.—18 to 20 guineas per term.

SOUTHSEA.

The Medical Officer of Health writes:—"Portsmouth, including Southsea, is largely patronised as a health resort. The town is exceptionally light, sunny, and cheerful in appearance. The climate is specially beneficial in cases of anæmia, tuberculous affections, and to delicate children."

GIRLS. **ST. HILDRED'S,**
CRANEWATER PARK.

HIGH-CLASS SCHOOL FOR DAUGHTERS OF GENTLEMEN.

Principal - Miss PAYNE.

(Assisted by highly-qualified Mistresses and Visiting Professors.)

Receives a limited number of resident pupils to whom she offers all the advantages of a thorough modern education combined with careful training and the comforts of a refined home.

Pupils prepared for Oxford and Cambridge Locals, College of Preceptors, Royal Drawing Society, and Royal College of Music examinations.

Fees.—£45 per annum.

STANMORE.

The Medical Officer of Health writes:—"Stanmore, in Middlesex, 13½ m. from London, occupies an elevated, healthy position in a district which offers excellent residential attractions to City men. There are many fine country seats in the vicinity." Pop. 1,843.

GIRLS. **"WOODLANDS."**

HIGH-CLASS BOARDING SCHOOL FOR GIRLS

Principal - - Miss COWPER.

Assisted by strong Resident Staff and Visiting Professors.

Premises.—Country Residence in 5 acres grounds; every convenience, high elevation.

Aim—Preparation for life by harmonious development of Moral, Intellectual, and Physical Powers.

Curriculum. — Comprehensive; thorough Modern System, individual treatment according to requirements. Examinations if required.

Physical Training. — Gymnastics, Swedish Drill; Out-door Games and Recreation.

Entire charge where parents abroad.

STRATFORD-ON-AVON.

The Medical Officer of Health writes:—"Climate intermediate between that of north of England and the south coast, and particularly suitable for elderly people and children. The town offers a choice of elevation; rainfall moderate."

GIRLS. **THE FIRS.**

SCHOOL FOR DAUGHTERS OF GENTLEMEN.

Principal - Mrs. CAMERON STUART.

Assisted by Resident and Visiting Staff.

The School Course provides all usual subjects for Modern Education. Special attention given to Music, Art, Literature, Languages. Health and Diet studied. Brilliant Successes in Examinations.

School House.—Fine modern mansion in own grounds, 8 acres, gravel soil.

Tennis, Croquet, Hockey, Boating, Swimming, Riding.

Special provision for Colonial and Foreign Pupils.

Fees.—£60 to £90.

TAUNTON

(Somerset). The Medical Officer of Health writes:—"The town of Taunton is situated in the centre of a wide and beautiful valley. The climate is mild, the rainfall low, average 27 inches per annum. There is an excellent water-supply. The town is well sewered. The death-rate is low." Pop. 22,561.

BOYS. **KING'S COLLEGE.**

Headmaster - Rev. F. H. GEORGE, M.A.
(late Scholar, Jesus College, Cambridge.)

Situation, 1½ miles from Taunton Station. Open and remarkably healthy.

Grounds, 23 acres. Open-air Swimming Bath.

Buildings include big School, Laboratory, Lecture Room, Library, Reading-room, Chapel. Dormitories face South.

School conducted on principles of the old Public Schools of the Church of England.

Officers' Training Corps.

Preparation for all Examinations and for Commercial Life.

Fees.—£39 per annum inclusive.

TORQUAY.

The Medical Officer of Health writes:—"Sunshine, equability of temperature, dryness of the air, and a singular absence of fogs may be regarded as the main characteristics of the winter climate of Torquay. The meteorological returns of past summers show that the temperature is some 5 to 10 degrees lower than that of London, which is due to its being situated on a peninsula and to its proximity to Dartmoor." Sunshine (1914), 1,796 hours. Pop. 38,771.

GIRLS. **THE TUDORS.**

FRENCH AND ENGLISH HIGH-CLASS HOME SCHOOL FOR DAUGHTERS OF GENTLEMEN.

Principals—
MADAME and MADEMOISELLE MASCOT

Principal - - - Miss M. H. HIGGINS.

Assisted by Resident Staff of qualified Mistresses proficient in *English, Music, Art,* and *Foreign Languages.*

Premises.—Excellent; elevated situation on gravel soil, in own extensive grounds of nearly four acres.

School Course.—Provides for broad Education upon Modern lines; GIRLS TAUGHT USE AND NECESSITY of corporate public-spirited life.

Usual Public Examinations prepared for.

Social observances receive due care.

Fees moderate.

WEYMOUTH

(Dorset). **The Medical Officer of Health writes**:—"Its rare geographical position, pure, fresh, and invigorating breezes, wealth of bright sunshine, small rainfall, soft yet mildly invigorating atmosphere free from any oppressive humidity, render the climate one of the most equable."

GIRLS.

WESTBOURNE SCHOOL,

1 and 3, GROSVENOR ROAD, WEYMOUTH.

BOARDING AND DAY SCHOOL.

Principal - - Miss BATT.

Assisted by Certificated Teachers and Visiting Professors.

Kindergarten Class for Children under 8. Pupils prepared for Oxford and Cambridge Locals and Trinity College of Music, London.

Lessons given in Wood-Carving by Miss Batt (Medallist).

Games.—Playing Field, Hockey, Tennis.

WINDSOR.

The Medical Officer of Health writes:—"The subsoils are of gravel and brick-earth, clay and chalk. The climate is mild. The water-supply (which is municipal) is constant, abundant, and of excellent purity. There are good public swimming-baths. The town is a healthy one, and the death-rate low." Pop. 12,681.

BOYS.

ST. GEORGE'S SCHOOL,

WINDSOR CASTLE.

Headmaster - - G. S. FOWLER, M.A.

A Preparatory School for the Public Schools and the Choir School for St. George's Chapel, Windsor Castle.

A good musical education can be given to all boys, and is under the supervision of Sir Walter Parratt, M.V.O., Master of the King's Music.

Fees £78 per annum. For choristers they are reduced to £58 and for choral scholars to £18 per annum.

WOODBRIDGE

(Suffolk). The climate of Woodbridge has all the bracing qualities associated with the East Coast without extreme rigour. The rainfall is moderate, and while the tidal river, Deben, brings cool sea-breezes in summer, warm and sunny autumns are the rule. Pop. 4,623.

BOYS.

WOODBRIDGE SCHOOL.

Well-endowed Public School with old traditions and progressive modern policy.

Situation.—Exceptionally healthy; 39 acres grounds.

Buildings. — Extensive, modern, thoroughly hygienic; Laboratories, Gymnasium, and Workshop.

Three Boarding Houses.—Junior boys separate. Good and liberal diet.

Preparation for Universities, Civil Service, Army, Scientific pursuits, and Country Life.

Games and Sports organised, Cadet Corps, numerous Exhibitions, Scholarships and Prizes.

Apply, Headmaster, R. KENNARD DAVIS, M.A.

Fees.—£15 to £20 per term.

ATLANTIC TRANSPORT LINE.

LONDON to NEW YORK every Week.

The only Passenger Line from London to New York direct.

FLEET.—S.S. MINNEAPOLIS, 13,543 tons; S.S. MINNEHAHA, 13,714 tons; S.S. MINNETONKA, 13,440 tons; S.S. MINNEWASKA, 14,317 tons; S.S. MINNEKAHDA (New Steamer Building), 15,000 tons. These steamers are completely up-to-date, and have luxurious accommodation, large State Rooms, Music Room, Smoking Room, Electric Light, and Refrigerator. Cuisine and Service excellent. All the State Rooms and Saloons are amidships, so that there will be very little motion felt in steamers of this great size. The majority of the State Rooms are on the Bridge Deck, a position for which very high fares are usually charged. FIRST-CLASS PASSENGERS ONLY. Table and attendance First Class.

SCHEDULE OF FARES.—£19, and upwards. Children under 10 years half price. Infants under 12 months £2.—For particulars of passage apply to

ATLANTIC TRANSPORT COMPANY, LIMITED, 1, Cockspur St., London, S.W., and 38, Leadenhall Street, London, E.C. [66

CAPITAL STOCK - - - - £400,000
DEBENTURE STOCK - - - £331,130

Chairman : JOHN CROFT DEVERELL, Esq.
Deputy-Chairman : RICHARD STEPHENS TAYLOR, Esq.

PURCHASES. The Society purchases Reversions and Remainders, whether absolute or contingent, Life Interests, whether in possession or deferred, and generally all Interests (in approved property) that depend upon the duration of human life.

LOANS.—The Society also grants Loans on the security of such Interests, either on Ordinary Mortgage or by way of Reversionary Charge. The latter mode meets the convenience of borrowers who do not wish to make any payment for either principal or interest until their Reversionary Property falls into possession. The amount to which the Society will then be entitled is fixed at the outset, and does not depend on the time elapsing between the grant of the Loan and its repayment.

Forms of Proposal and full information can be obtained at the Society's Offices.

Favourably reviewed by over **100** Influential Newspapers.

"HOW TO SELECT A LIFE OFFICE."

By G. M. DENT, F.S.S.

Extracts from a few Press Opinions.

MORNING POST.—"Mr. G. M. Dent, who is a Fellow of the Royal Statistical Society, has written a valuable pamphlet on Life Assurance, in which all the more important questions connected with the subject are discussed by a firm of merchants and an insurance broker. . . . There are two carefully-prepared tables."

PALL MALL GAZETTE.—"Deals very clearly with the main points to be borne in mind in selecting an office, and the tabular matter is very useful. Armed with this pamphlet, and blessed with a little commonsense, the ordinary man cannot go very far wrong."

LAW JOURNAL.—"A cleverly-written dialogue. Both tables are explained with great lucidity."

STATIST.—"The form of question and answer relieves the work very much from the heavy character of a statistical inquiry." "To those who may contemplate insurance, the expenditure of 1s. on this pamphlet will be a judicious outlay."

FINANCIAL TIMES.—"Carefully and skilfully compiled."

POLICY-HOLDER.—"Life Assurance as an investment, and Endowment Assurance, are both explained in a very attractive way."

UNITED SERVICE GAZETTE.—"The fact that this pamphlet has now reached its third edition amply demonstrates the value of its contents. Illustrations, proving the great value of life assurance as an investment, accompany the pamphlet, which also shows how to determine the relative merit of Offices which are not altogether 'much of a muchness' as is generally believed."

BRADFORD OBSERVER.—"The remarks on Life Assurance as a paying investment, apart from its protection against the misfortune of premature death, deserve to be widely read."

CARDIFF TIMES.—"In terse and lucid fashion Mr. Dent not merely emphasises the utility of Life Assurance as an investment, but also explains how the assurer may obtain the maximum of security and the largest return for money."

GLASGOW HERALD.—"The pamphlet takes the form of a dialogue, which, together with a series of tables, shows the features to which an intending assurer should direct his attention before selecting a company."

LIVERPOOL COURIER.—"The dialogue is smartly written, and touches on many of the most important elements that have to be considered before a policy is taken in any office. Appended are illustrative tables showing how widely different offices vary in their mode of doing business."

Price **1s.** By post, **1s. 1d.** (under four ounces).

FRIENDS' PROVIDENT INSTITUTION

FOR MUTUAL LIFE ASSURANCE

ESTABLISHED 1832

ACCUMULATED FUND - - - - - - - - £3,400,000
ANNUAL INCOME - - - - - - - - - £300,000

The Institution was established in 1832 as a Mutual Assurance Association by Members of the Society of Friends (Quakers), and originally confined its operations to Friends and their near relatives, but the Directors now have power and are prepared to grant Assurances to persons who are not connected with Friends.

The Scale of Premiums charged is low; but, owing to the longevity of the class of persons assured and economical management, very satisfactory Bonuses have been realised.

Head Office—BRADFORD, YORKSHIRE;
London Office: 17, GRACECHURCH STREET, E.C.

FIRE DEPARTMENT.

FIRE INSURANCES effected upon Property at Home and Abroad at moderate rates. Losses by Lightning are made good by the Company.

LIFE DEPARTMENT.

The very satisfactory results of the last Division of Profits are fully set out in the Company's Prospectus. The Reserves were substantially increased, and the rates of Bonus will compare favourably with those of most Offices.

GENERAL DEPARTMENT.

Personal Accident, Employers' Liability, Public Liability, Motor Cars, Property Owners' Indemnity, Burglary, Fidelity, Glass, Registered Post, Forged Transfers, Consequential Loss resulting from Fire (including Loss of Profit), and "All Risks."

Policies are issued insuring against All Accidents and certain Diseases, and against the Liability of Employers for Accidents to their Workmen or Servants or to the Public.

The Company grants Policies of Insurance against loss by Burglary, Housebreaking and Larceny and Breakage of Glass upon moderate terms. The Company also grants Policies covering Employers against loss arising from the fraud or dishonesty of their Employees. Moderate rates of Premium for these and all other classes of Insurance undertaken by the Company.

Full information will be forwarded on application.

The Directors are prepared to consider Applications for Agencies. 193

NORWICH UNION
MUTUAL LIFE OFFICE

ESTABLISHED - - - - - - - 1808.

Because of its

AGE. It is a Centenarian in its own right, and, by its absorption of the Amicable Society, **THE OLDEST LIFE OFFICE IN THE WORLD.**

MAGNITUDE. Its annual volume of New Business is very much larger than that of any other British Life Office not transacting Industrial Business. In 1914, notwithstanding war conditions, £2,857,193 was completed in the United Kingdom (as against £2,794,738 in 1913) and £1,786,331 in the Colonies and abroad.

RESERVE STRENGTH. Its valuations are made on a Reserve Basis of 2½%—a rate attained, or even aimed at, by very few Offices.

PROFIT YIELD. Notwithstanding the severity of the Reserve Basis, and a drastic revision of assets involving a writing down of funds to the extent of £264,022, the 1911 Valuation showed a Surplus of £727,153, and the handsome scale of Bonuses of 1906 was mantained.

ALERTNESS. Its special Tables are designed to meet all the needs of the Twentieth Century, and have done much to popularise Insurance.

ECONOMY. The ratio of expenditure to premium income, always low having regard to the volume of new business, in 1914 was 1½% lower even than in 1913.

BRITISH AND FOREIGN SAILORS' SOCIETY

The Oldest Sailors' Society in the World

Patrons: Their Majesties the King and Queen,
Her Majesty Queen Alexandra,
Earl Kitchener, K.G.,
Admiral Sir John Jellicoe, G.C.B.

"The British and Foreign Sailors' Society stands for the great brotherhood of the sea."—*King George V.*

"Let me assure you of my most sincere sympathy in the magnificent work which the Society is carrying out, especially during the present war."
H.M. Queen Alexandra.

"I am sure that the Homes and Institutes all over the world are the greatest possible boon to sailors, and I wish the Society every success in the future in the work which has been so thoroughly carried out in the past."—
Admiral Sir John Jellicoe, G.C.B.

The war has heavily taxed the resources of the Society. Its institutions have been freely placed at the disposal of the authorities to help the wounded sailors and soldiers. Crews from more than **FIFTY** torpedoed ships have been received into and cared for at our Sailors' Homes round the Coasts. Will you send a gift to aid this noble service? **WE EARNESTLY APPEAL FOR LEGACIES.**

WE ALL OWE A DEEP DEBT TO OUR SAILORS. Gifts of money, clothing, books and magazines, games, &c., earnestly invited. Donations and offers of help cordially welcomed by the Treasurer, Sir FREDERICK GREEN, J.P., The Sailors' Palace, Commercial Road, London, E. [195

THE CANCER HOSPITAL—FREE

(FOUNDED 1851. INCORPORATED UNDER ROYAL CHARTER.)

FULHAM ROAD, LONDON, S.W.

The only Special Hospital in London for the treatment of Cancer.

A special refuge for poor persons afflicted with this fearful disease, who are admitted free without letters of recommendation.

A number of beds are provided for the use of Patients who may remain for Life.

Out-patients are seen on their own application each week-day except Saturday, at 2 p.m.

New Annual Subscriptions and Donations are urgently solicited for General Expenses and for the Research Department.

FRED. W. HOWELL, *Secretary.*

FORM OF BEQUEST.

"I give and bequeath unto the Treasurer for the time being of THE CANCER HOSPITAL (FREE) *situate in the Fulham Road, Brompton, London, Middlesex, the sum of*
(free of Legacy Duty), to be applied towards carrying on the charitable design of the said Institution." [137

CHURCH MISSIONARY SOCIETY

SALISBURY SQUARE, LONDON, E.C.

Vice-Patron—THE LORD ARCHBISHOP OF CANTERBURY.
President—THE RIGHT HON. SIR JOHN H. KENNAWAY, BART., C.B.
Honorary Secretary—THE REV. CYRIL C. B. BARDSLEY, M.A.

"The War should move us to do more, not less, for the enlargement of Christ's Kingdom. The peace of the world rests ultimately upon the spread of the Gospel."—*The Bishop of Stepney.*

THE SOCIETY'S OPERATIONS cover extensive spheres in Africa, India, Ceylon, China, Japan, Palestine, Turkish Arabia, Persia, North-West Canada, and British Columbia. The Society has upon its Staff 1,379 European Missionaries and 11,073 Native Christian workers.

SOME RESULTS.—During the past year there were 19,448 adult baptisms; 248,303 scholars attended 3,676 Schools and Colleges; and the mission hospitals received 43,185 in-patients and visits from 1,303,205 out-patients.

THE WORK ENTRUSTED TO US.—The work is temporarily interrupted in Palestine, Turkish Arabia, and German East Africa, but looking over all the mission-fields where the Society is at work it can be stated in the strongest terms that the opportunities for carrying on the great work entrusted to us were never so great and insistent.

ALL CHURCHMEN are cordially invited to co-operate with the Society in furthering these efforts to extend the Church of Christ.

Further information regarding its work can be obtained on application to the Home Superintendent, Church Missionary House, Salisbury Square, London, E.C. [141

CHURCH PASTORAL-AID SOCIETY.

"Our country for Christ."

Patron: HIS MAJESTY THE KING.

Nearly Six Millions of our population live in parishes helped through the Society's Grants. The 1127 Clergy and Lay Workers strive to reach and help the poor and all who dwell in the purlieus of our large cities and towns.

FUNDS ARE URGENTLY NEEDED NOW.

Treasurer: J. F. W. DEACON, Esq., J.P., D.L.
Secretaries: Rev. T. C. CHAPMAN, M.A., and A. THOMAS, Esq.

CHURCH OF ENGLAND

WAIFS AND STRAYS SOCIETY

NEEDS help for its large family of over **4,600** Children.
115 Homes, including Farm, Industrial, and Cripples' Homes.
Over **20,000** Children Rescued.

Help to Save the Children—the Nation's Greatest Asset.

Secretary: Rev. Prebendary RUDOLF, Waifs and Strays Society, Old Town Hall, Kennington Road, London, S.E. [140

CITY OF LONDON HOSPITAL
FOR
DISEASES OF THE CHEST

The Hospital adjoins the Victoria Park (217 acres), and is popularly known as the VICTORIA PARK HOSPITAL.

Under the Patronage of
HIS MAJESTY THE KING, HER MAJESTY THE QUEEN, HER MAJESTY QUEEN ALEXANDRA.

President: H.R.H. THE DUKE OF CONNAUGHT, K.G. | *Treasurer:* SIR G. WYATT TRUSCOTT, BT.
Bankers: MESSRS. BARCLAY & CO., LTD., 54, Lombard Street, E.C.

The Hospital contains **175** Beds, and has over **30,000** attendances of Out-Patients annually. OPEN-AIR treatment on balconies is provided for the consumptive patients; and the grounds of the Hospital, which extend to four acres, are a valuable adjunct as a means of recreation and exercise, allowing also of the patients doing light manual work.

A Legacy or Donation of £1,000 gives the right to name a bed; and £500 a Cot, in perpetuity.

HELP IS VERY URGENTLY NEEDED to carry on this great work among the poor of the East End, and from other parts of London and the Country.

GEORGE WATTS, *Secretary.* [143

THE DOGS' HOME
OR TEMPORARY HOME FOR LOST AND STARVING DOGS
(An Institution for the Protection of Dogs & Cats)

4, BATTERSEA PARK ROAD, S.W.
and HACKBRIDGE, SURREY.

Patron:
His Most Gracious Majesty the King.
President:
His Grace the DUKE OF PORTLAND, K.G.

OBJECTS:

1. To provide food and shelter for the lost, deserted, and starving dogs of London and the immediate neighbourhood.
2. To restore lost dogs to their rightful owners.
3. When good dogs are unclaimed, to find suitable homes for them at nominal charges.
4. To destroy, by a merciful and painless method, all valueless and diseased dogs.

Out-Patients' Department (Dogs and Cats only), at Battersea, Tuesdays & Thursdays, 2.30, by letter only, from any Subscriber.

Dogs and Cats can be received as Boarders at Hackbridge, and Dogs for Quarantine under the Importation of Dogs Order, 1901.

Contributions will be thankfully received by
GUY H. GUILLUM SCOTT, *Secretary.* [150

HIS MAJESTY THE KING. HER MAJESTY THE QUEEN.
HER MAJESTY QUEEN ALEXANDRA.

THE EAST LONDON HOSPITAL FOR CHILDREN

SHADWELL, E.,

APPEALS FOR YOUR PRACTICAL SYMPATHY.

THE work on behalf of London's poorest is invaluable. Mothers and their sick children are continually receiving the benefits of the institution throughout the year. There are 124 beds at Shadwell and 28 at the Convalescent Home at Bognor in constant use.

HELP IS URGENTLY NEEDED.

£10,000 is required annually from Voluntary Sources.

LEGACIES EARNESTLY SOLICITED. £1.000 ENDOWS A COT IN PERPETUITY.

W. M. WILCOX,
Secretary

Bankers: Union of London and Smiths, Ltd.

CITY OF LONDON TRUSS SOCIETY

For the Relief of the RUPTURED POOR throughout the Kingdom.
Instituted 1807.
35, FINSBURY SQUARE, LONDON, E.C.
Patron—HIS MAJESTY THE KING.

The average number of poor persons suffering from the dangerous and distressing malady of Hernia or Rupture annually relieved by this charity during the past ten years has been over 8,000. The Patients are of both sexes and from all parts of the Kingdom. The youngest patient relieved was an infant of seven days old; the oldest, a woman of 107 years. Every patient attending at the Institution is treated by the Surgeons of the Society by whom the Truss is applied.

ADDITIONAL FUNDS ARE URGENTLY NEEDED to enable the Committee to carry on the beneficent work of the Charity, which necessitates an expenditure far in excess of its income. Annual subscribers of one guinea or more are entitled to recommend four patients within the year for every guinea so subscribed.

ONE LETTER OF RECOMMENDATION ONLY is required, however expensive the necessary instrument may be.

W. K. TAUNTON, *Secretary.* [144

EVELINA HOSPITAL FOR CHILDREN,

SOUTHWARK, LONDON, S.E.

Under the Patronage of THEIR MAJESTIES THE KING AND QUEEN.

Supported by Voluntary Contributions.

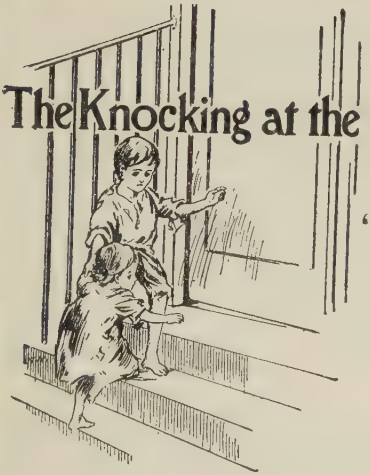
Only large **CHILDREN'S** HOSPITAL IN SOUTH LONDON. Situated in its poorest District.

FUNDS GREATLY NEEDED.

Please help this Charity, "not only because it is a Hospital, but because it is a Hospital for Children."

President—VISCOUNT DUNCANNON, M.P.
Chairman—D. MALCOLM SCOTT, ESQ.
Treasurer—GERALD D. SMITH, ESQ.
Secretary—H. C. STANILAND SMITH. [145

DR. BARNARDO'S HOMES



CHARTER:

"No Destitute Child Ever Refused Admission."

Motto: "For God and Country."

NO WAITING LIST.
NO VOTES REQUIRED.
NO RED TAPE.

A FEW FIGURES.

81,510 Children have passed through the Rescue Doors.
1,577 entered last year.
7,480 is the average number of children in residence.
700 of these are Infants.
806 are Crippled, Incurable, Blind, Deaf and Dumb, physically afflicted, or sick.
3,826 are Boarded-out in Rural Districts in England and Canada.
1,060 Boys and Girls are under Industrial Training.
26,281 Young People have been emigrated to Canada and the Overseas Dominions. 95 per cent. do well.
4,754 Barnardo Boys are serving the Country in the Army and Navy and Mercantile Marine.
300 Boys are in training for the Navy.

*** *Cheques and Orders, payable "Dr. Barnardo's Homes," and Parcels of Clothing may be sent to the Honorary Director, William Baker, M.A., LL.B., at Head Offices, 18 to 26, STEPNEY CAUSEWAY, LONDON, E.*

[132

GENERAL LYING-IN HOSPITAL,

York Road, Lambeth, S.E. ESTABLISHED 1765.

Patrons—H.M. The Queen and H.M. Queen Alexandra.

This Hospital is situated in one of the poorest parts of London, in the district South of the Thames, with a population of nearly two millions.

Married women in indigent circumstances, especially the wives of Soldiers and Sailors, and certain single women (with their first child, after investigation by the Committee), are admitted to the Hospital from all parts of the kingdom, but mainly from the immediate neighbourhood, from which owing to its poverty, little pecuniary help is obtainable.

Subscriptions and Donations thankfully received by the Treasurer or MISS ROSE E. WHYTE, *the Secretary, at the Hospital.* [146

THE GIRLS' FRIENDLY SOCIETY.

Patrons—HER MAJESTY THE QUEEN; HER MAJESTY QUEEN ALEXANDRA.

The G.F.S. is an Imperial Society which links together in friendly bonds over 300,000 women of all ages and of all ranks of society in all parts of the world for mutual help. Its aim is to set before its Members a high ideal of purity of thought, word, and deed; to help them to be true to that ideal; to be a standing witness to the possibility of purity of life and conduct for every woman and girl in the land; to guard the hundreds of thousands of girls who are growing up to womanhood from acknowledged dangers, and to extend to them the priceless boon of loving Christian fellowship.

The various Departments of G.F.S. work include help for Sick Members, After-care of Workhouse Children, Registry Work, an Invalids' Work Depôt, protection in Emigration and in Travelling, the provision of Homes of Rest, Industrial Training, and the encouragement of Temperance and Thrift.

All information can be obtained from—

THE SECRETARY, G.F.S. Central Office, 39, Victoria St., Westminster, S.W.

Telegrams: "AUGUST, VIC., LONDON." *Telephone:* 2521 VICTORIA. [147

THE GORDON BOYS' HOME

(THE NATIONAL MEMORIAL TO GENERAL GORDON).

Patron—THE KING. *Vice-Patrons*—H.M. THE QUEEN and H.M. QUEEN ALEXANDRA.

THE HOME IS SITUATED AT WEST END, WOKING, NEAR BROOKWOOD.

OFFICES—5, YORK STREET, ST. JAMES'S S.W.

The Home is constructed to accommodate 250 Boys, chosen from the homeless and destitute, between the ages of 13½ and 15½, and give them a training, up to the age of 17 or thereabouts, which will fit them alike for civil life in this country or its Colonies, and for service in the Army, Navy or Mercantile Marine.

CONDITIONS OF ADMISSION.—1. None are admitted below 13½ years of age or above 15½. 2. A boy must, in the opinion of the Committee, be really necessitous. 3. He must be free from such physical or mental infirmity as would disqualify him for service in the Army or Navy, or for civil employment in the Colonies or elsewhere, which would require active bodily exertion. 4. Boys of known bad character are ineligible.

Free admission is given to such number of boys as above as can be provided for out of the general income of the Home. A guaranteed payment of £22 annually during his stay at the Home will give a right of nomination for a lad fulfilling the conditions of admission. Subscriptions and Donations are urgently needed in order that the above number of boys may be maintained.

Subscriptions are received by THE LONDON COUNTY AND WESTMINSTER BANK, 1, St. James's Square, S.W.; by the Treasurer, General the Right Hon. Sir DIGHTON PROBYN, V.C., G.C.B., Marlborough House, S.W.; and by the Secretary at the Office, 5, York Street, St. James's, S.W., from whom any further information can be obtained.

E. G. MARKHAM, Esq., *Secretary.* [148

GUY'S HOSPITAL

LONDON BRIDGE, S.E.

BEDS, 643. IN-PATIENTS (1914), 9,924. OUT-PATIENTS, 115,982.

The Governors Earnestly Appeal for:—

NEW ANNUAL SUBSCRIPTIONS and DONATIONS to meet the large difference of about **£30,000** between assured income and ordinary outgoings, for which the Hospital is from year to year dependent on **VOLUNTARY SUPPORT.**

A Legacy or Donation of £1,000 names or endows a Bed in perpetuity.

A Legacy or Donation of £500 names or endows a Cot in perpetuity.

A Yearly Subscription of £50 or £25 supports a Bed or a Cot respectively.

VISCOUNT GOSCHEN, *Treasurer.*

SEPTEMBER, 1915. *Bankers*—THE BANK OF ENGLAND. [149

HOMES OF HOPE

4, 5 & 6, REGENT SQ., GRAY'S INN RD., LONDON, W.C.

ESTABLISHED 1860.

Special efforts are made on behalf of young women about to have their first child. They are admitted into the Homes and receive **Medical Maternity Attendance** and **Nursing.** They are also **Trained** in **Household Duties,** and after a nurse-mother has been found for the infant the mother is put in the way of **earning a living** for **herself and the child.** Every endeavour is used to trace the father and make him jointly responsible with the mother for the maintenance of the infant born to them.

There is also a **Preventive Home,** where important work is done in **Rescuing Young Girls** from the snares of sin and immorality, and trained for domestic service.

Contributions may be sent to the Secretary at the above address, or to the Treasurer, ALFRED HOARE, ESQ., 37, *Fleet Street, E.C.* [151

THE HOSPITAL FOR DISEASES OF THE SKIN,

70, BLACKFRIARS ROAD, S.E.

Telephone: Hop. 1021. ESTABLISHED 1841.

Patroness—HER MOST GRACIOUS MAJESTY QUEEN ALEXANDRA.
Vice-Patron—THE RIGHT HON. LORD HAVERSHAM. *Treasurer*—ROBERT BARCLAY, ESQ.
President—THE RIGHT HON. THE EARL OF KINNOULL.

The Hospital was removed during 1915 to the present site in Blackfriars Road, where the new building has recently been completed. The increased facilities afforded have greatly extended the utility of the Hospital.

Over **488,000** patients have been treated at this Hospital, which was the first and for many years the only Institution in the United Kingdom for the Special Treatment of Cutaneous Diseases.

PATIENTS are admitted on small payment, entitling them to four weeks' treatment, or by Subscriber's letter of Recommendation. Indigent persons are admitted entirely free.

OUT-PATIENTS are seen daily at 2 p.m., and on Friday evenings at 6.30 p.m.

Medical Men and Students are admitted free to the daily practice on presentation of their cards.

The Hospital is fully equipped with all modern methods of treatment. Subscriptions and Donations towards the maintenance of the Hospital are earnestly requested and may be sent to [152

FREDERICK HAYTER, *Secretary.*

INFANT ORPHAN ASYLUM,

WANSTEAD.

Patron—HIS MAJESTY THE KING. | *Bankers*—LLOYDS BANK, LTD., 66, W. Smithfield, E.C.

This Institution maintains and educates the Orphans of persons once in prosperity, from all parts of the Empire, from their Earliest Infancy until Fifteen years of age.

It has received **5,072** Fatherless Children already. Forty-two were admitted last year.

About **400** are in the Asylum now. Elections will be held in May and November this year. Forms of nomination can be obtained at the Office.

Nearly the whole of the Yearly Income arises from Voluntary Contributions. *Assistance is therefore urgently needed,* and will be thankfully acknowledged.

LONDON FEVER HOSPITAL,
ISLINGTON, N.

Patron: HIS MAJESTY THE KING.
President: The Rt. Hon. LORD BALFOUR OF BURLEIGH, K.T., G.C.M.G.

100,000 persons have been received and treated here since 1802. The Diseases admitted are Scarlet Fever, Diphtheria, Measles, and German Measles; and Typhoid when accommodation can be made available. The general ward fee is three guineas for the whole term of treatment. Private rooms, five guineas a week. Patients' payments amount to about a fifth of the annual outlay, the balance falling upon the funds of the Institution. This system encourages people who are willing to pay a part at least of the cost of their illness to do so rather than remain for treatment at home or cast themselves upon the rates. No help is received from the rates by this Hospital.

Annual subscribers of a guinea and upwards for more than one year are Governors, and donors of ten guineas and upwards in one sum are Life Governors. Domestic servants of Governors, and certain employés of subscribing business houses, clubs, and hotels, are promptly removed and treated free of charge. Application to the Secretary with a medical certificate will ensure prompt removal by motor. The application can be made personally, or by letter, telegram, or telephone: 687 North.

Bankers: UNION OF LONDON AND SMITHS, 50, Cornhill, E.C. W. CHRISTIE, *Secretary*. [155

LONDON LOCK HOSPITAL AND RESCUE HOME

Patron - - - H.M. THE KING.

UNENDOWED AND IN GREAT NEED.

Treasurers:—LORD KINNAIRD and J. F. W. DEACON, Esq.

Founded in 1746, this Special Hospital has for 170 years devoted all its energies to the treatment and cure of venereal diseases. Thousands of young women and girls from all parts of the kingdom have been relieved of their bodily suffering and helped to regain their self-respect, and thereby enabled to make a fresh start in life. ANNUAL SUBSCRIPTIONS AND DONATIONS ARE EARNESTLY PLEADED FOR.

Offices: 283, Harrow Road, London, W. HY. J. EASON, *Secretary*.

FORM OF BEQUEST.

I bequeath to the Treasurers for the time being of the London Lock Hospital and Rescue Home, Harrow Road, Paddington, W., and Dean Street, Soho, both in the County of Middlesex, the sum of £ to be applied for the purposes of the Female Hospital, Rescue Home (or Male Hospital and Out-patients' Department, as may be desired) and I direct the said Legacy to be paid free of death duty, and as soon as conveniently may be after my death.

Under the Patronage of HIS MAJESTY KING GEORGE V., HER MAJESTY QUEEN MARY, HER MAJESTY QUEEN ALEXANDRA.

LONDON ORPHAN SCHOOL
WATFORD
(*Incorporated as the London Orphan Asylum*).

The Managers earnestly appeal for help towards the maintenance of the 500 Fatherless boys and girls now in the School from all parts of the **BRITISH EMPIRE,** representing all professions and callings. 7,382 such children have been maintained and educated, the majority having been provided with situations.

The Society is dependent upon **voluntary help** for **£17,000 annually,** owing to the great increase in the cost of necessaries.

Vacancies have been declared for children of Officers or Warrant Officers killed in the War.

Annual Subscriptions from 10*s.* 6*d.*, Life Subscriptions from £5 5*s.*, and DONATIONS **will be gladly received.**

ARTHUR P. BLATHWAYT, *Treasurer and Chairman.*
Office: 3, CROSBY SQUARE, BISHOPSGATE, E.C. HENRY C. ARMIGER, *Secretary.* [158

The METROPOLITAN VISITING and RELIEF ASSOCIATION,
Including the Metropolitan Portions of the Dioceses of London, Southwark, and Essex.

President—THE LORD BISHOP OF LONDON.
Treasurers—JOHN H. NELSON, ESQ., and ERNEST FARQUHAR, ESQ.
Secretary—GRANT MARSTON, ESQ. OFFICE: 46A, PALL MALL, S.W.

1. The aim of the Association is to Distribute such Funds as may be committed to it in grants to the Local Committees of poor parishes, proportionate to the needs of each.
2. The Clergy and District Visitors are the unpaid Agents of Relief, and possess the indispensable qualification of personal knowledge of the poor.
3. The overburdened Clergy are hereby greatly assisted in dealing with the distressing cases constantly before them. The religious persuasion of the poor is no obstacle to their relief.
4. Every penny contributed is devoted to the relief of destitution, all the working expenses being otherwise provided for.

Annual report will be forwarded on application to the Secretary.

Subscriptions and Donations to enable the Committee to carry on the work efficiently are greatly needed.

Cheques, payable to GRANT MARSTON, should be sent to the Office, 46A, Pall Mall, S.W., or to LLOYDS BANKING LTD., 16, St. James's Street, S.W.

METROPOLITAN HOSPITAL,

KINGSLAND ROAD, N.E.

Unendowed and Entirely Free to the Sick Poor.

Patron: HIS MAJESTY THE KING.
President: THE RIGHT HON. THE LORD MAYOR.
Chairman: THE RIGHT HON. LORD HOWARD DE WALDEN.
Vice-Chairman: T. DYER EDWARDES, Esq., J.P.
Treasurers: LEOPOLD DE ROTHSCHILD, Esq., C.V.O.
THE HON. CHARLES T. MILLS, M.P.

SPECIAL APPEAL.

The Metropolitan Hospital is in the Kingsland Road, far removed from the rich, and ministers to a population of nearly half-a-million of the poorest inhabitants of London.

Approximately 1,700 In and 37,000 Out-Patients are treated annually, the attendances of the latter amounting to upwards of 122,000.

At the present time there are 160 beds available for In-Patients, including a Ward for Children, and two Wards, with special kitchens, &c., for Jewish patients.

Every care is taken to avoid abuse of the charity; and a trained Almoner is employed for this purpose and to form the necessary link between the Hospital and outside charities for providing patients with any extra help that they may require to secure the full and permanent benefit from their treatment.

The necessary annual expenditure is approximately £15,000 a year, but the income from invested property is under £600. Over £14,400 has every year to be collected from the charitable public.

Appeal is also made for Funds to build the NURSES' HOME on the Hospital's land behind the Ward blocks.

Bankers: GLYN, MILLS & CO. LLOYDS BANK LIMITED.

J. C. BUCHANAN,
Secretary and House Governor.

HELP—*by donations, subscriptions and legacies—is urgently needed, and very earnestly solicited.*

Life without hope, at any rate in this world. Life, a long and wretched period of suffering, in which the poor sufferer might be forgiven for looking forward to being a burden to his friends and relatives. This is the fate of many. Can we do nothing to lighten this black, dark misery? Can we do nothing to alleviate this suffering? Thoughts like these make one anxious to help such an Institution as THE ROYAL HOSPITAL FOR INCURABLES, PUTNEY HEATH.

[181

Society for the Abolition of Vivisection

22, NORTHUMBERLAND AVENUE, LONDON.

According to the latest Parliamentary Return, the number of experiments made in 1914 was 87,253. A large number of these were inoculation experiments, and, as the report says, "are attended by no considerable, if appreciable, pain."

The pain does not lie in the operation itself, but in the after effects.

The animal so innocently operated on may have to live days, weeks or months with no anæsthetics to assauge its sufferings, and nothing but death to relieve.

The following is an example of what may ensue in the dog after the "little needle prick":—

"A dog was inoculated on January 23rd. In a few days it began to show signs of wasting, then the head became swelled and dropsical, and also the fore-legs and paws; later on this swelling disappeared, but the dog seemed very ill and weak, and there was a thickening of the membrane of both eyes. Two days before its death it refused food and seemed very thirsty. On February 20th it died."—Abridged from the *Journal of Pathology and Bacteriology*, March, 1906.

The Society offers to send a Lecturer, free of charge, to Literary Societies, League Meetings, &c. [193

President—His Royal Highness PRINCE ARTHUR OF CONNAUGHT, K.G., K.T., G.C.V.O., P.C.
Treasurer—LEOPOLD DE ROTHSCHILD, Esq., C.V.O., J.P., D.L. *Chairman*—GEORGE F. MARSHALL, Esq.

IT needs:—£63,000 to carry out the scheme of extension by which provision is made for about 250 beds; and £17,000 annually to maintain the present work of relieving about 2,800 In-Patients and 36,000 Out-Patients. Its endowments yield an annual income of only £600. Wherefore it relies upon voluntary contributions for £16,400 wherewith to meet its annual expenditure of £17,000. For many years past the debt has averaged £10,000.

...s the nearest General Hospital for Hammersmith, Fulham, Acton, Chiswick, Brentford, and to ...ge portions of Kensington and Barnes. The population it serves numbers more than 500,000 persons. It is entitled to receive and hold devises of freehold land or any other property.

A. BETTERIDGE, *Secretary.*
